THE RATIONALE OF VERSE

[Published in the *Pioneer*, March, 1843, as "Notes on English Verse."]

THE word "Verse" is here used not in its strict or primitive sense, but as the term most convenient for expressing generally and without pedantry all that is involved in the consideration of rhythm, rhyme, metre, and versification.

There is, perhaps no topic in polite literature which has been more pertinaciously discussed, and there is certainly not one about which so much inaccuracy, confusion, misconception, misrepresentation, mystification, and downright ignorance on all sides, can be fairly said to exist. Were the topic really difficult, or did it lie, even, in the cloud-land of metaphysics, where the doubt-vapors may be made to assume any and every shape at the will or at the fancy of the gazer, we should have less reason to wonder at all this contradiction and perplexity; but in fact the subject is exceedingly simple; one tenth of it, possibly, may be called ethical; nine-tenths, however, appertain to the mathematics; and the whole is included within the limits of the commonest common sense.

“But, if this is the case, how,” it will be asked, “can so much misunderstanding have arisen? Is it conceivable that a thousand profound scholars, investigating so very simple a matter for centuries, have not been able to place it in the fullest light, at least, of which it is susceptible?” These queries, I confess, are not easily answered:—at all events, a satisfactory reply to them might cost more trouble than would, if properly considered, the whole *vexata quæstio* to which they have reference. Nevertheless, there is little difficulty or danger in suggesting that the “thousand profound scholars” *may* have failed, first, because they were scholars, secondly, because they were profound, and thirdly, because they were a thousand—the impotency of the scholarship and profundity having been thus multiplied a thousand fold. I am serious in these suggestions; for, first again, there is something in “scholarship” which seduces us into blind worship of Bacon’s Idol of the Theatre—into irrational deference to antiquity; secondly, the proper “profundity” is rarely profound—it is the nature of Truth in general, as of some ores in particular, to be richest when most superficial; thirdly, the clearest subject may be overclouded by mere superabundance of talk. In chemistry, the best way of separating two bodies is to add a third; in speculation, fact often agrees with fact and argument with argument, until an additional well-meaning fact or argument sets every thing by the ears. In one case out of a hundred a point is excessively discussed because it is ob-

scure; in the ninety-nine remaining it is obscure because excessively discussed. When a topic is thus circumstanced, the readiest mode of investigating it is to forget that any previous investigation has been attempted.

But, in fact, while much has been written on the Greek and Latin rhythms, and even on the Hebrew, little effort has been made at examining that of any of the modern tongues. As regards the English, comparatively nothing has been done. It may be said, indeed, that we are without a treatise on our own verse. In our ordinary grammars and in our works on rhetoric or prosody in general, may be found occasional chapters, it is true, which have the heading, "Versification," but these are, in all instances, exceedingly meagre. They pretend to no analysis; they propose nothing like system; they make no attempt at even rule; every thing depends upon "authority." They are confined, in fact, to mere exemplification of the supposed varieties of English feet and English lines;—although in no work with which I am acquainted are these feet correctly given or these lines detailed in anything like their full extent. Yet what has been mentioned is all—if we except the occasional introduction of some pedagogue-ism, such as this, borrowed from the Greek Prosodies: "When a syllable is wanting, the verse is said to be catalectic; when the measure is exact, the line is acatalectic; when there is a redundant syllable it forms hypermeter." Now whether a line be termed catalectic or acatalectic is, perhaps, a

point, of no vital importance;—it is even possible that the student may be able to decide, promptly, when the *a* should be employed and when omitted, yet be incognizant, at the same time, of *all* that is worth knowing in regard to the structure of verse.

A leading defect in each of our treatises, (if treatises they can be called,) is the confining the subject to mere *Versification*, while *Verse* in general, with the understanding given to the term in the heading of this paper, is the real question at issue. Nor am I aware of even one of our Grammars which so much as properly defines the word *versification* itself. “*Versification*,” says a work now before me, of which the accuracy is far more than usual—the “*English Grammar*” of Gould Brown—“*Versification* is the art of arranging words into lines of correspondent length, so as to produce harmony by the regular alternation of syllables differing in quantity.” The commencement of this definition might apply, indeed, to the *art* of versification, but not *versification* itself. *Versification* is not the art of arranging, &c., but the actual arranging—a distinction too obvious to need comment. The error here is identical with one which has been too long permitted to disgrace the initial page of every one of our school grammars. I allude to the definitions of *English Grammar* itself. “*English Grammar*,” it is said, “is the art of speaking and writing the English language correctly.” This phraseology, or something essentially similar, is employed, I believe, by

Bacon, Miller, Fisk, Greenleaf, Ingersoll, Kirkland, Cooper, Flint, Pue, Comly and many others. These gentlemen, it is presumed, adopted it without examination from Murray, who derived it from Lily, (whose work was "*quam solam Regia Majestas in omnibus scholis docendam præcipit*,"") and who appropriated it without acknowledgement, but with some unimportant modification, from the Latin Grammar of Leonicensus. It may be shown, however, that this definition, so complacently received, is not, and cannot be, a proper definition of English Grammar. A definition is that which so describes its object as to distinguish it from all others:—it is no definition of any one thing if its terms are applicable to any other. But if it be asked—"What is the design—the end—the aim of English Grammar?" our obvious answer is, "The art of speaking and writing the English language correctly:"—that is to say, we must use the precise words employed as the definition of English Grammar itself. But the object to be obtained by any means is, assuredly, not the means. English grammar and the end contemplated by English Grammar, are two matters sufficiently distinct; nor can the one be more reasonably regarded as the other than a fishing-hook as a fish. The definition, therefore, which is applicable in the latter instance, *cannot*, in the former, be true. Grammar in general is the analysis of language; English Grammar of the English.

But to return to Versification as defined in our extract above. "It is the art," says the extract,

“of arranging words into lines of *corresponding length*.” Not so:—a correspondence in the length of lines is by no means essential. Pindaric odes are, surely, instances of versification, yet these compositions are noted for extreme diversity in the length of their lines.

The arrangement is moreover said to be for the purpose of producing “*harmony* by the regular alternation,” &c. But *harmony* is not the sole aim—not even the principal one. In the construction of verse, *melody* should never be left out of view; yet this is a point which all our Prosodies have most unaccountably forborne to touch. Reasoned rules on this topic should form a portion of all systems of rhythm.

“So as to produce harmony,” says the definition, “by the *regular alternation*,” &c. A *regular* alternation, as described, forms no part of any principle of versification. The arrangement of spondees and dactyls, for example, in the Greek hexameter, is an arrangement which may be termed *at random*. At least it is arbitrary. Without interference with the line as a whole, a dactyl may be substituted for a spondee, or the converse, at any point other than the ultimate and penultimate feet, of which the former is always a spondee, the latter nearly always a dactyl. Here, it is clear, we have no “*regular alternation of syllables differing in quantity*.”

“So as to produce harmony,” proceeds the definition, “by the regular alternation of *syllables differing in quantity*,” —in other words by the alternation of long and short syllables; for

in rhythm all syllables are necessarily either short or long. But not only do I deny the necessity of any *regularity* in the succession of feet, and, by consequence, of syllables, but dispute the essentiality of any *alternation*, regular or irregular, of syllables long and short. Our author, observe, is now engaged in a definition of versification in general, not of English versification in particular. But the Greek and Latin metres abound in the spondee and pyrrhic—the former consisting of two long syllables; the latter of two short; and there are innumerable instances of the immediate succession of many spondees and many pyrrhics.

Here is a passage from Silius Italicus:

Fallis te mensas inter quod credis inermem
Tot bellis quæsita viro, tot cædibus armat
Majestas æterna ducem: si admoveris ora
Cannas et Trebiam ante oculos Trasymenæque busta,
Et Pauli stare ingentem miraberis umbram.

Making the elisions demanded by the classic Prosodies, we should scan these Hexameters thus:

Fállis | tē mēn—sās in | tēr qūod | crēdīs in | ěrmēm |
Tōt bēl—lis qūæ | sītā vī | rō tōt—cædibŭs | ārmāt |
Mājēs | tās æ | tērnā dŭ—cēm s'ād | mōvēris | ōrā |
Cānnās | ět Trēbī' | ānt'ōcŭ | lōs Trāsŷ | mēnāque | būstā
Ēt Pāu | lī stā | r'ingēn | tēm mī | rābēris | ūmbrām |

It will be seen that, in the first and last of these lines, we have only two short syllables in thirteen, with an uninterrupted succession of no less than *nine* long syllables. But how are we

to reconcile all this with a definition of versification which describes it as "the art of arranging words into lines of correspondent length so as to produce harmony by the *regular alternation of syllables differing in quantity?*"

It may be urged, however, that our prosodist's *intention* was to speak of the English metres alone, and that, by omitting all mention of the spondee and pyrrhic, he has virtually avowed their exclusion from our rhythms. A grammarian is never excusable on the ground of good intentions. We demand from him, if from any one, rigorous precision of style. But grant the design. Let us admit that our author, following the example of all authors on English Prosody, has, in defining versification at large, intended a definition merely of the English. All these prosodists, we will say, reject the spondee and pyrrhic. Still all admit the iambus, which consists of a short syllable followed by a long; the trochee, which is the converse of the iambus; the dactyl, formed of one long syllable followed by two short; and the anapæst—two short succeeded by a long. The spondee is improperly rejected, as I shall presently show. The pyrrhic is rightfully dismissed. Its existence in either ancient or modern rhythm is purely chimerical, and the insisting on so perplexing a nonentity as a foot of *two short* syllables, affords, perhaps, the best evidence of the gross irrationality and subservience to authority which characterize our Prosody. In the meantime the acknowledged

dactyl and anapæst are enough to sustain my proposition about the "alternation," &c., without reference to feet which are assumed to exist in the Greek and Latin metres alone: for an anapæst and a dactyl may meet in the same line; when of course we shall have an uninterrupted succession of four short syllables. The meeting of these two feet, to be sure, is an accident not contemplated in the definition now discussed; for this definition, in demanding a "regular alternation of syllables differing in quantity," insists on a regular succession of similar *feet*. But here is an example:

Sîng tǒ mǎ | Isăbēlle.

This is the opening line of a little ballad now before me, which proceeds in the same rhythm—a peculiarly beautiful one. More than all this:—English lines are often well composed, entirely, of a regular succession of syllables *all of the same quantity*:—the first lines, for instance, of the following quatrain by Arthus C. Coxe:

March! march! march!
 Making sounds as they tread.
 Ho! ho! how they step,
 Going down to the dead!

The line italicised is formed of three cæsuras. The cæsura, of which I have much to say hereafter, is rejected by the English Prosodies and grossly misrepresented in the classic. It is a perfect foot—the most important in all verse—and

consists of a single *long* syllable; *but the length of this syllable varies.*

It has thus been made evident that there is *not one* point of the definition in question which does not involve an error. And for anything more satisfactory or more intelligible we shall look in vain to any published treatise on the topic.

So general and so total a failure can be referred only to radical misconception. In fact the English Prosodists have blindly followed the pedants. These latter, like *les moutons de Panurge*, have been occupied in incessant tumbling into ditches, for the excellent reason that their leaders have so tumbled before. The *Iliad*, being taken as a starting point, was made to stand in stead of Nature and common sense. Upon this poem, in place of facts and deduction from fact, or from natural law, were built systems of feet, metres, rhythms, rules,—rules that contradict each other every five minutes, and for nearly all of which there may be found twice as many exceptions as examples. If any one has a fancy to be thoroughly confounded—to see how far the infatuation of what is termed “classical scholarship” can lead a book-worm in the manufacture of darkness out of sunshine, let him turn over, for a few moments, any of the German Greek Prosodies. The only thing clearly made out in them is a very magnificent contempt for Leibnitz’s principle of “a sufficient reason.”

To divert attention from the real matter in hand by any farther reference to these works,

is unnecessary, and would be weak. I cannot call to mind, at this moment, one essential particular of information that is to be gleaned from them; and I will drop them here with merely this one observation: that, employing from among the numerous "*ancient*" feet the spondee, the trochee, the iambus, the anapæst, the dactyl, and the cæsura alone, I will engage to scan *correctly* any of the Horatian rhythms, or any true rhythm that human ingenuity can conceive. And this excess of chimerical feet is, perhaps, the very least of the scholastic supererogations. *Ex uno disce omnia*. The fact is that *Quantity* is a point in whose investigation the lumber of mere learning may be dispensed with, if ever in any. Its appreciation is universal. It appertains to no region, nor race, nor æra in especial. To melody and to harmony the Greeks hearkened with ears precisely similar to those which we employ for similar purposes at present; and I should not be condemned for heresy in asserting that a pendulum at Athens would have vibrated much after the same fashion as does a pendulum in the city of Penn.

Verse originates in the human enjoyment of equality, fitness. To this enjoyment, also, all the moods of verse—rhythm, metre, stanza, rhyme, alliteration, the *refrain*, and other analogous effects—are to be referred. As there are some readers who habitually confound rhythm and metre, it may be as well here to say that the former concerns the *character* of feet (that is, the arrangements of syllables), while the latter

has to do with the *number* of these feet. Thus by "a dactylic *rhythm*" we express a sequence of dactyls. By "a dactyle *hexameter*" we imply a line or measure consisting of six of these dactyls.

To return to *equality*. Its idea embraces those of similarity, proportion, identity, repetition, and adaptation or fitness. It might not be very difficult to go even behind the idea of equality, and show both how and why it is that the human nature takes pleasure in it, but such an investigation would, for any purpose now in view, be supererogatory. It is sufficient that the *fact* is undeniable—the fact that man derives enjoyment from his perception of equality. Let us examine a crystal. We are at once interested by the equality between the sides and between the angles of one of its faces: the equality of the sides pleases us; that of the angles doubles the pleasure. On bringing to view a second face in all respects similar to the first, this pleasure seems to be squared; on bringing to view a third it appears to be cubed, and so on. I have no doubt, indeed, that the delight experienced, if measurable, would be found to have exact mathematical relations such as I suggest; that is to say, as far as a certain point, beyond which there would be a decrease in similar relations.

The perception of pleasure in the equality of *sounds* is the principle of *Music*. Unpractised ears can appreciate only simple equalities, such as are found in ballad airs. While comparing one simple sound with another they are too much

occupied to be capable of comparing the equality subsisting between these two simple sounds, taken conjointly, and two other similar simple sounds taken conjointly. Practised ears, on the other hand, appreciate both equalities at the same instant—although it is absurd to suppose that both are *heard* at the same instant. One is heard and appreciated from itself: the other is heard by the memory; and the instant glides into and is confounded with the secondary, appreciation. Highly cultivated musical taste in this manner enjoys not only these double equalities, all appreciated at once, but takes pleasurable cognizance, through memory, of equalities the members of which occur at intervals so great that the uncultivated taste loses them altogether. That this latter can properly estimate or decide on the merits of what is called scientific music, is of course impossible. But scientific music has no claim to intrinsic excellence—it is fit for scientific ears alone. In its excess it is the triumph of the *physique* over the *morale* or music. The sentiment is overwhelmed by the sense. On the whole, the advocates of the simpler melody and harmony have infinitely the best of the argument;—although there has been very little of real argument on the subject.

In *verse*, which cannot be better designated than as an inferior or less capable Music, there is, happily, little chance for complexity. Its rigidly simple character not even Science—not even Pedantry can greatly pervert.

The rudiment of verse may, possibly, be found
X. 2

in the *spondee*. The very germ of a thought seeking satisfaction in equality of sound, would result in the construction of words of two syllables, equally accented. In corroboration of this idea we find that spondees most abound in the most ancient tongues. The second step we can easily suppose to be the comparison, that is to say, the collocation, of two spondees—of two words composed each of a spondee. The third step would be the juxta-position of three of these words. By this time the perception of monotone would induce farther consideration: and thus arises what Leigh Hunt so flounders in discussing under the title of “The *Principle* of Variety in Uniformity.” Of course there is no principle in the case—nor in maintaining it. The “Uniformity” is the principle:—the “Variety” is but the principle’s natural safeguard from self-destruction by excess of self. “Uniformity,” besides, is the very worst word that could have been chosen for the expression of the *general* idea at which it aims.

The perception of monotone having given rise to an attempt at its relief, the first thought in this new direction would be that of collating two or more words formed each of two syllables differently accented (that is to say, short and long) but having the same order in each word:—in other terms, of collating two or more iambuses, or two or more trochees. And here let me pause to assert that more pitiable nonsense has been written on the topic of *long* and *short* syllables than on any other subject under the sun. In

general, a syllable is long or short, just as it is difficult or easy of enunciation. The *natural* long syllables are those encumbered—the *natural* short syllables are those *unencumbered*, with consonants; all the rest is mere artificiality and jargon. The Latin Prosodies have a rule that “a vowel before two consonants is long.” This rule is deduced from “authority”—that is, from the observation that vowels so circumstanced, in the ancient poems, are always in syllables long by the laws of scansion. The philosophy of the rule is untouched, and lies simply in the physical difficulty of giving voice to such syllables—of performing the lingual evolutions necessary for their utterance. Of course, it is not the *vowel* that is long, (although the rule says so) but the syllable of which the vowel is a part. It will be seen that the length of a syllable, depending on the facility or difficulty of its enunciation, must have great variation in various syllables; but for the purposes of verse we suppose a long syllable equal to two short ones:—and the natural deviation from this relativeness we correct in perusal. The most closely our long syllables approach this relation with our short ones, the better, *ceteris paribus*, will be our verse: but if the relation does not exist in itself, we force it by emphasis, which can, of course, make any syllable as long as desired;—or, by an effort we can pronounce with unnatural brevity a syllable that is naturally too long. *Accented* syllables are of course always long—but, where *unencumbered* with consonants, must be classed among

the *unnaturally* long. Mere custom has declared that we shall accent them—that is to say, dwell upon them; but no inevitable lingual difficulty forces us to do so. In fine, every long syllable must of its own accord occupy in its utterance, or must be *made* to occupy, precisely the time demanded for two short ones. The only exception to this rule is found in the cæsura— of which more anon.

The success of the experiment with the trochees or iambuses (the one would have suggested the other) must have led to a trial of dactyls or anapæsts—natural dactyls or anapæsts—dactylic or anapæstic *words*. And now some degree of complexity has been attained. There is an appreciation, first, of the equality between the several dactyls, or anapæsts, and, secondly, of that between the long syllable and the two short conjointly. But here it may be said, that step after step would have been taken, in continuation of this routine, until all the feet of the Greek Prosodies became exhausted. Not so:—these remaining feet have no existence except in the brains of the scholiasts. It is needless to imagine men inventing these things, and folly to explain how and why they invented them, until it shall be first shown that they are actually invented. All other “feet” than those which I have specified, are, if not impossible at first view, merely combinations of the specified; and, although this assertion is rigidly true, I will, to avoid misunderstanding, put it in a somewhat different shape. I will say, then, that at present I am

aware of no *rhythm*—nor do I believe that any one can be constructed—which, in its last analysis, will not be found to consist altogether of the feet I have mentioned, either existing in their individual and obvious condition, or interwoven with each other in accordance with simple natural laws which I will endeavor to point out hereafter.

We have now gone so far as to suppose men constructing indefinite sequences of spondaic, iambic, trochaic, dactylic, or anapæstic, words. In *extending* these sequences, they would be again arrested by the sense of monotone. A succession of spondees would *immediately* have displeased; one of iambuses or of trochees, on account of the variety included within the foot itself, would have taken longer to displease; one of dactyls or anapæsts, still longer; but even the last, if extended very far, must have become wearisome. The idea, first, of curtailing, and, secondly, of defining the length of, a sequence, would thus at once have arisen. Here then is the *line*, or verse proper.* The principle of equality being constantly at the bottom of the whole process, lines would naturally be made, in the first instance, equal in the number of their feet; in the second instance, there would be variation in the mere number; one line would

* Verse, from the Latin *vertere*, to turn, is so called on account of the turning or re-commencement of the series of feet. Thus a verse, strictly speaking, is a line. In this sense, however, I have preferred using the latter word alone; employing the former in the general acceptation given it in the heading of this paper.

be twice as long as another; then one would be some less obvious multiple of another; then still less obvious proportions would be adopted:—nevertheless there would be *proportion*, that is to say, a phase of equality, still.

Lines being once introduced, the necessity of distinctly defining these lines *to the ear*, (as yet written verse does not exist,) would lead to a scrutiny of their capabilities *at their terminations*:—and now would spring up the idea of equality in sound between the final syllables—in other words, of *rhyme*. First, it would be used only in the iambic, anapæstic, and spondaic rhythms, (granting that the latter had not been thrown aside, long since, on account of its tameness;) because in these rhythms, the concluding syllable being long, could best sustain the necessary protraction of the voice. No great while could elapse, however, before the effect, found pleasant as well as useful, would be applied to the two remaining rhythms. But as the chief force of rhyme must lie in the accented syllable, the attempt to create rhyme at all in these two remaining rhythms, the trochaic and dactylic, would necessarily result in double and triple rhymes, such as *beauty* with *duty* (trochaic,) and *beautiful* with *dutiful* (dactylic).

It must be observed, that in suggesting these processes. I assign them no date: nor do I even insist upon their order. Rhyme is supposed to be of modern origin, and were this proved, my positions remain untouched. I may say, however, in passing, that several instances of rhyme

occur in the "Clouds" of Aristophanes, and that the Roman poets occasionally employ it. There is an effective species of ancient rhyming which has never descended to the moderns: that in which the ultimate and penultimate syllables rhyme with each other. For example:

Parturiunt montes et nascitur ridiculus mus.

And again:

Litoreis ingens inventa sub ilicibus sus.

The terminations of Hebrew verse, (as far as understood,) show no signs of rhyme; but what thinking person can doubt that it did actually exist? That men have so obstinately and blindly insisted, *in general*, even up to the present day, in confining rhyme to the *ends* of lines, when its effect is even better applicable elsewhere, intimates, in my opinion, the sense of some *necessity* in the connexion of the end with the rhyme—hints that the origin of rhyme lay in a necessity which connected it with the end—shows that neither mere accident nor mere fancy gave rise to the connexion—points, in a word, at the very necessity which I have suggested, (that of some mode of defining lines *to the ear*,) as the true origin of rhyme. Admit this, and we throw the origin far back in the night of Time—beyond the origin of written verse.

But, to resume. The amount of complexity I have now supposed to be attained, is very considerable. Various systems of equalization are appreciated at once (or nearly so) in their respec-

tive values and in the value of each system with reference to all the others. As our present *ultimatum* of complexity, we have arrived at triple-rhymed, natural-dactylic lines, existing proportionally as well as equally with regard to other triple-rhymed, natural-dactylic lines. For example:

Virginal Lilian, rigidly, humbly dutiful;
 Saintlily, lowlily,
 Thrillingly, holily
 Beautiful!

Here we appreciate, first, the absolute equality between the long syllable of each dactyl and the two short conjointly; secondly, the absolute equality between each dactyl and any other dactyl—in other words, among all the dactyls; thirdly, the absolute equality between the two middle lines; fourthly, the absolute equality between the first line and the three others taken conjointly; fifthly, the absolute equality between the last two syllables of the respective words “dutiful” and “beautiful;” sixthly, the absolute equality between the two last syllables of the respective words “lowlily” and “holily;” seventhly, the proximate equality between the first syllable of “dutiful” and the first syllable of “beautiful;” eighthly, the proximate equality between the first syllable of “lowlily” and that of “holily;” ninthly, the proportional equality (that of five to one,) between the first line and each of its members, the dactyls; tenthly, the proportional equality (that of two to one,) be-

tween each of the middle lines and its members, the dactyls; eleventhly, the proportional equality between the first line and each of the two middle—that of five to two; twelfthly, the proportional equality between the first line and the last—that of five to one; thirteenthly, the proportional equality between each of the middle lines and the last—that of two to one; lastly, the proportional equality, as concerns number, between all the lines, taken collectively and any individual line—that of four to one.

The consideration of this last equality would give birth immediately to the idea of *stanza**—that is to say, the insulation of lines into equal or obviously proportional masses. In its primitive (which was also its best) form, the stanza would most probably have had absolute unity. In other words, the removal of any one of its lines would have rendered it imperfect; as in the case above, where, if the last line, for example, be taken away, there is left no rhyme to the “dutiful” of the first. Modern stanza is excessively loose—and where so, ineffective, as a matter of course.

Now, although in the deliberate written statement which I have here given of these various systems of equalities, there seems to be an infinity of complexity—so much that it is hard to conceive the mind taking cognizance of them all in the brief period occupied by the perusal or recital of the stanza—yet the difficulty is in fact

* A stanza is often vulgarly, and with gross impropriety, called a *verse*.

apparent only when we will it to become so. Any one fond of mental experiment may satisfy himself, by trial, that, in listening to the lines, he does actually (although with a seeming unconsciousness, on account of the rapid evolutions of sensation,) recognise and instantaneously appreciate (more or less intensely as his ear is cultivated,) each and all of the equalizations detailed. The pleasure received, or receivable, has very much such progressive increase, and in very nearly such mathematical relations, as those which I have suggested in the case of the crystal.

It will be observed that I speak of merely a proximate equality between the first syllable of "dutiful" and that of "beautiful;" and it may be asked why we cannot imagine the earliest rhymes to have had absolute instead of proximate equality of sound. But absolute equality would have evolved the use of identical words; and it is the duplicate sameness or monotony—that of sense as well as that of sound—which would have caused these rhymes to be rejected in the very first instance.

The narrowness of the limits within which verse composed of natural feet alone, must necessarily have been confined, would have led, after a *very* brief interval, to the trial and immediate adoption of artificial feet—that is to say, of feet *not* constituted each of a single word, but two or even three words; or of parts of words. These feet would be intermingled with natural ones. For example:

Ā brēath | cǎn mǎke | thēm ās | ǎ brēath | hās mǎde.

This is an iambic line in which each iambus is formed of two words. Again.

Thē ūn | ĩmā | gĭnā | blē mĭght | ǒf Jōve.

This is an iambic line in which the first foot is formed of a word and a part of a word; the second and third, of parts taken from the body or interior of a word; the fourth, of a part and a whole; the fifth, of two complete words. There are no *natural* feet in either lines. Again:

Cǎn ĩt bē | fānciēd thāt | Dēity | ēvēr vĭn | dictĭvēly
Mǎde ĩn hĭs | ĩmāge ā | mǎnnĭkĭn | mērely tō | mǎddēn ĩt?

These are two dactylic lines in which we find natural feet, ("Deity," "mannikin;") feet composed of two words ("fancied that," "image a," "merely to," "madden it;") feet composed of three words ("can it be," "made in his;") a foot composed of a part of a word ("dictively:") and a foot composed of a word and a part of a word ("ever vin.")

And now, in our supposititious progress, we have gone so far as to exhaust all the *essentialities* of verse. What follows may, strictly speaking, be regarded as embellishment merely—but even in this embellishment, the rudimental sense of *equality* would have been the never-ceasing impulse. It would, for example, be simply in seeking farther administration to this sense that men would come, in time, to think of the *refrain*,

or burden, where, at the closes of the several stanzas of a poem, one word or phrase is *repeated*; and of alliteration, in whose simplest form a consonant is *repeated* in the commencements of various words. This effect would be extended so as to embrace repetitions both of vowels and of consonants, in the bodies as well as in the beginnings of words; and, at a later period, would be made to infringe on the province of rhyme, by the introduction of general similarity of sound between whole feet occurring in the body of a line:—all of which modifications I have exemplified in the line above,

Made in his image a mannikin merely to madden it.

Farther cultivation would improve also the *refrain* by relieving its monotone in slightly varying the phrase at each repetition, or, (as I have attempted to do in "The Raven,") in retaining the phrase and varying its application—although this latter point is not strictly a rhythmical effect *alone*. Finally, poets when fairly wearied with following precedent—following it the more closely the less they perceived it in company with Reason—would adventure so far as to indulge in positive rhyme at other points than the ends of lines. First, they would put it in the middle of the line; then at some point where the multiple would be less obvious; then, alarmed at their own audacity, they would undo all their work by cutting these lines in two. And here is the fruitful source of the infinity of "short metre,"

by which modern poetry, if not distinguished, is at least disgraced. It would require a high degree, indeed, both of cultivation and of courage, on the part of any versifier, to enable him to place his rhymes—and let them remain—at unquestionably their best position, that of unusual and *unanticipated* intervals.

On account of the stupidity of some people, or, (if talent be a more respectable word,) on account of their talent for misconception—I think it necessary to add here, that I believe the “processes” above detailed to be nearly if not accurately those which *did* occur in the gradual creation of what we now call verse; secondly, that, although I so believe, I yet urge neither the assumed fact nor my belief in it, as a part of the true propositions of this paper; thirdly, that in regard to the aim of this paper, it is of no consequence whether these processes did occur either in the order I have assigned them, or at all; my design being simply, in presenting a general type of what such processes *might* have been and *must* have resembled, to help *them*, the “some people,” to an easy understanding of what I have farther to say on the topic of Verse.

There is one point which, in my summary of the processes, I have purposely forborne to touch; because this point, being the most important of all, on account of the immensity of error usually involved in its consideration, would have led me into a series of detail inconsistent with the object of a summary.

Every reader of verse must have observed how

seldom it happens that even any one line proceeds uniformly with a succession, such as I have supposed, of absolutely equal feet; that is to say, with a succession of iambuses only, or of trochees only, or of dactyls only, or of anapæsts only, or of spondees only. Even in the most musical lines we find the succession interrupted. The iambic pentameters of Pope, for example, will be found on examination, frequently varied by trochees in the beginning, or by (what seem to be) anapæsts in the body, of the line.

Ōh thōu | whātē | vēr tī | tlē pleāse | thīne eār |
 Déan Drā | piēr Bīck | ěrstāff | őr Gūl | līvēr
 Whēthēr | thōu choōse | Cěrvān | tēs' sē | rīōūs āir |
 Ōr laūgh | ānd shāke | īn Rāb | ělaīs' eā | sŷ chaīr. |

Were any one weak enough to refer to the Pro-sodies for the solution of the difficulty here, he would find it *solved* as usual by a *rule*, stating the fact, (or what it, the rule, supposes to be the fact,) but without the slightest attempt at the *rationale*. “By a *synœresis* of the two short syllables,” say the books, “an anapæst may sometimes be employed for an iambus, or a dactyl for a trochee. . . . In the beginning of a line a trochee is often used for an iambus.”

Blending is the plain English for *synœresis*—but there should be *no* blending; neither is an anapæst *ever* employed for an iambus, or a dactyl for a trochee. These feet differ in time; and *no* feet so differing can ever be legitimately used in the same line. An anapæst is equal to four short syllables—an iambus only to three. Dac-

tyls and trochees hold the same relation. The principle of *equality*, in verse, admits, it is true, of variation at certain points, for the relief of monotone, as I have already shown, but the point of *time* is that point which, being the rudimental one, must never be tampered with at all.

To explain:—In farther efforts for the relief of monotone than those to which I have alluded in the summary, men soon came to see that there was no absolute necessity for adhering to the precise number of syllables, provided the time required for the whole foot was preserved inviolate. They saw, for instance, that in such a line as

Ör lāugh | ānd shāke | ĩn Rāb | ělaĭs' ēa | sŷ chāĭr, |

the equalization of the three syllables *elaïs ea* with the two syllables composing any of the other feet, could be readily effected by pronouncing the two syllables *elaïs* in double quick time. By pronouncing each of the syllables *e* and *laïs* twice as rapidly as the syllable *sy*, or the syllable *in*, or any other short syllable, they could bring the two of them, taken together, to the length, that is to say to the time, of any one short syllable. This consideration enabled them to affect the agreeable variation of three syllables in place of the uniform two. And variation was the object—variation to the ear. What sense is there, then, in supposing the object rendered null by the *blending* of the two syllables so as to render them, in absolute effect, one? Of course, there

must be *no* blending. Each syllable must be pronounced as distinctly as possible, (or the variation is lost,) but with twice the rapidity in which the ordinary short syllable is enunciated. That the syllables *elais ea* do not compose an *anapæst* is evident and the signs (ăăă) of their accentuation are erroneous. The foot might be written thus (aaa) the inverted crescents expressing double quick time; and might be called a bastard iambus.

Here is a trochaic line:

Sēe thē dēlicāte | fōotēd | rēin-deēr. |

The prosodies—that is to say the most considerate of them—would here decide that “*delicate*” is a dactyl used in place of a trochee, and would refer to what they call their “rule,” for justification. Others, varying the stupidity, would insist upon a Procrustean adjustment thus (del’cate)—an adjustment recommended to all such words as *silvery*, *murmuring*, etc., which, it is said, should be not only pronounced, but written *silv’ry*, *murm’ring*, and so on, whenever they find themselves in trochaic predicament. I have only to say that “*delicate*,” when circumstanced as above, is neither a dactyl nor a dactyl’s equivalent; that I would suggest for it this (aaa—inverted) accentuation; that I think it as well to call it a bastard trochee; and that all words, at all events, should be written and pronounced *in full*, and as nearly as possible as nature intended them.

About eleven years ago, there appeared in "The American Monthly Magazine," (then edited, I believe, by Mess. Hoffman and Benjamin,) a review of Mr. Willis' Poems; the critic putting forth his strength, or his weakness, in an endeavor to show that the poet was either absurdly affected, or grossly ignorant of the laws of verse; the accusation being based altogether on the fact that Mr. W. made occasional use of this very word "delicate," and other similar words, in "the Heroic measure which every one knew consisted of feet of two syllables." Mr. W. has often, for example, such lines as

That binds him to woman's *delicate* love—
In the gay sunshine, *reverent* in the storm—
With its *invisible* fingers my loose hair.

Here, of course, the feet *licate love*, *verent in*, and *sible fin*, are bastard iambuses; are *not* anapaests; and are *not* improperly used. Their employment, on the contrary, by Mr. Willis, is but one of the innumerable instances he has given of keen sensibility in all those matters of taste which may be classed under the general head of *fanciful embellishment*.

It is also about eleven years ago, if I am not mistaken, since Mr. Horne, (of England,) the author of "Orion," one of the noblest epics in any language, thought it necessary to preface his "Chaucer Modernized" by a very long and evidently a very elaborate essay, of which the greater portion was occupied in a discussion of the seemingly anomalous foot of which we have

been speaking. Mr. Horne upholds Chaucer in its frequent use; maintains his superiority, *on account* of his so frequently using it, over all English versifiers; and, indignantly repelling the common idea of those who make verse on their fingers—that the superfluous syllable is a roughness and an error—very chivalrously makes battle for it as “a grace.” That a grace it *is*, there can be no doubt; and what I complain of is, that the author of the most happily versified long poem in existence, should have been under the necessity of discussing this grace merely *as* a grace, through forty or fifty vague pages, solely because of his inability to show *how* and *why* it is a grace—by which showing the question would have been settled in an instant.

About the trochee used for an iambus, as we see in the beginning of the line,

Whēthēr thou choose Cervantes’ serious air,

there is little that need be said. It brings me to the general proposition that, in all rhythms, the prevalent or distinctive feet may be varied at will, and nearly at random, by the *occasional* introduction of equivalent feet—that is to say, feet the sum of whose syllabic times is equal to the sum of the syllabic times of the distinctive feet. Thus the trochee, *whēthēr*, is equal, in the sum of the times of its syllables, to the iambus, *thōŭ chōōse*, in the sum of the times of *its* syllables; each foot being, in time, equal to three short syllables. Good versifiers who happen to be, also,

good poets, contrive to relieve the monotone of a series of feet, by the use of equivalent feet only at rare intervals, and at such points of their subject as seem in accordance with the *startling* character of the variation. Nothing of this care is seen in the line quoted above—although Pope has some fine instances of the duplicate effect. Where vehemence is to be strongly expressed, I am not sure that we should be wrong in venturing on *two consecutive* equivalent feet—although I cannot say that I have ever known the adventure made, except in the following passage, which occurs in “Al Aaraaf,” a boyish poem, written by myself when a boy. I am referring to the sudden and rapid advent of a star.

Dim was its little disk, and angel eyes
 Alone could see the phantom in the skies
 When first the phāntōm's cōurse wās fōund tō bē
 Hēadlōng hāthērward o'er the starry sea.

In the “general proposition” above, I speak of the *occasional* introduction of equivalent feet. It sometimes happens that unskilful versifiers, without knowing what they do, or why they do it, introduce so many “variations” as to exceed in number the “distinctive” feet; when the ear becomes at once balked by the *bouleversement* of the rhythm. Too many trochees, for example, inserted in an iambic rhythm, would convert the latter to a trochaic. I may note here, that, in all cases, the rhythm designed should be commenced and continued, *without* variation, until the ear has had full time to comprehend what is the

rhythm. In violation of a rule so obviously founded in common sense, many even of our best poets, do not scruple to begin an iambic rhythm with a trochee, or the converse; or a dactylic with an anapæst, or the converse; and so on.

A somewhat less objectionable error, although still a decided one, is that of commencing a rhythm, not with a different equivalent foot, but with a "bastard" foot of the rhythm intended. For example:

Māny ā | thoũght will | cōme tō | mēmōry. |

Here *many a* is what I have explained to be a bastard trochee, and to be understood should be accented with inverted crescents. It is objectionable solely on account of its position as the *opening* foot of a trochaic rhythm. *Memory*, similarly accented, is also a bastard trochee, but *unobjectionable*, although by no means demanded.

The farther illustration of this point will enable me to take an important step.

One of our finest poets, Mr. Christopher Pease Cranch, begins a very beautiful poem thus:

Many are the thoughts that come to me
 In my lonely musing ;
 And they drift so strange and swift
 There's no time for choosing
 Which to follow; for to leave
 Any, seems a losing.

"A losing" to Mr. Cranch, of course—but this *en passant*. It will be seen here that the intention is trochaic;—although we do *not* see this in-

tention by the opening foot, as we should do—or even by the opening line. Reading the whole stanza, however, we perceive the trochaic rhythm as the general design, and so, after some reflection, we divide the first line thus:

Many are the | thōughts thāt | cōme tō | mē. |

Thus scanned, the line will seem musical. It is—highly so. And it is because there is no end to instances of just such lines of apparently incomprehensible music, that Coleridge thought proper to invent his nonsensical *system* of what he calls “scanning by accents”—as if “scanning by accents” were anything more than a phrase. Whenever “Christabel” is really *not rough*, it can be as readily scanned by the true *laws* (not the supposititious *rules*) of verse, as can the simplest pentameter of Pope; and where it is rough (*passim*) these same laws will enable any one of common sense to show *why* it is rough and to point out, instantaneously, the remedy for the roughness.

A reads and re-reads a certain line, and pronounces it false in rhythm—unmusical. *B*, however, reads it *to A*, and *A* is at once struck with the perfection of the rhythm, and wonders at his dulness in not “catching” it before. Henceforward he admits the line to be musical. *B*, triumphant, asserts that, to be sure, the line is musical—for it is the work of Coleridge—and that it is *A* who is *not*; the fault being in *A*’s false reading. Now here *A* is right and *B* wrong.

That rhythm is erroneous, (at some point or other more or less obvious,) which *any* ordinary reader *can*, without design, read improperly. It is the business of the poet so to construct his line that the intention *must* be caught *at once*. Even when these men have precisely the same understanding of a sentence, they differ and often widely, in their modes of enunciating it. Any one who has taken the trouble to examine the topic of emphasis, (by which I here mean not *accent* of particular syllables, but the dwelling on entire words,) must have seen that men emphasize in the most singularly arbitrary manner. There are certain large classes of people, for example, who persist in emphasizing their monosyllables. Little uniformity of emphasis prevails; because the thing itself—the idea, emphasis—is referable to no natural—at least, to no well comprehended and therefore uniform law. Beyond a very narrow and vague limit, the whole matter is conventionality. And if we differ in emphasis even when we agree in comprehension, how much more so in the former when in the latter too! Apart, however, from the consideration of natural disagreement, is it not clear that, by tripping here and mouthing there, any sequence of words may be twisted into any species of rhythm? But are we thence to deduce that all sequences of words are rhythmical in a rational understanding of the term?—for this is the deduction, precisely to which the *reductio ad absurdum* will, in the end, bring all the propositions of Coleridge. Out of a hundred readers of

“Christabel,” fifty will be able to make nothing of its rhythm, while forty-nine of the remaining fifty will, with some ado, fancy they comprehend it, after the fourth or fifth perusal. The one out of the whole hundred who shall both comprehend and admire it at first sight—must be an unaccountably clever person—and I am by far too modest to assume, for a moment, that that very clever person is myself.

An illustration of what is here advanced I cannot do better than quote a poem:

Pease porridge hot—pease porridge cold—
Pease porridge in the pot—nine days old.

Now those of my readers who have never *heard* this poem pronounced according to the nursery conventionality, will find its rhythm as obscure as an explanatory note; while those who *have* heard it, will divide it thus, declare it musical, and wonder how there can be any doubt about it.

Pease | porridge | hot | pease | porridge | cold |
Pease | porridge | in the | pot | nine | days | old. |

The chief thing in the way of this species of rhythm, is the necessity which it imposes upon the poet of travelling in constant company with his compositions, so as to be ready at a moment's notice, to avail himself of a well understood poetical license—that of reading aloud one's own doggerel.

In Mr. Cranch's line,

Many are the | thoughts that | come to | me, |

the general error of which I speak is, of course, very partially exemplified, and the purpose for which, chiefly, I cite it, lies yet further on in our topic.

The two divisions (*thoughts that*) and '(*come to*) are ordinary trochees. Of the last division (*me*) we will talk hereafter. The first division (*many are the*) would be thus accented by the Greek Prosodies (mānŷ āre thē) and would be called by them ἀστρολόγος. The Latin books would style the foot *Pæon Primus*, and both Greek and Latin would swear that it was composed of a trochee and what they term a pyrrhic—that is to say, a foot of two *short* syllables—a thing that *cannot be*, as I shall presently show.

But now, there is an obvious difficulty. The *astrologos*, according to the Prosodies' own showing, is equal to *five* short syllables, and the trochee to *three*—yet, in the line quoted, these two feet are equal. They occupy *precisely* the same time. In fact, the whole music of the line depends upon their being *made* to occupy the same time. The Prosodies then, have demonstrated what all mathematicians have stupidly failed in demonstrating—that three and five are one and the same thing.

After what I have already said, however, about the bastard trochee and the bastard iambus, no one can have any trouble in understanding that *many are the* is of similar character. It is merely a bolder variation than usual from the routine of trochees, and introduces to the bastard trochee one additional syllable. But this syllable is not

short. That is, it is not short in the sense of “*short*” as applied to the final syllable of the ordinary trochee, where the word means merely *the half of long*.

In this case, (that of the additional syllable) “*short*,” if used at all, must be used in the sense of *the sixth of long*. And all the three final syllables can be called *short* only with the same understanding of the term. The three together are equal only to the one short syllable (whose place they supply) of the ordinary trochee. It follows that there is no sense in thus (—) accenting these syllables. We must devise for them some new character which shall denote the sixth of long. Let it be ()—the crescent placed with the curve to the left. The whole foot (māny āre thē) might be called a *quick trochee*.

We come now to the final division (*me*) of Mr. Cranch’s line. It is clear that this foot, short as it appears, is fully equal in time to each of the preceding. It is in fact the cæsura—the foot which, in the beginning of this paper, I called the most important in all verse. Its chief office is that of pause or termination; and here—at the end of a line—its use is easy, because there is no danger of misapprehending its value. We pause on it, by a seeming necessity, just so long as it has taken us to pronounce the preceding feet, whether iambusses, trochees, dactyls, or anapæsts. It is thus a *variable foot*, and, with some care, may be well introduced into the body of a line, as in a little poem of great beauty by Mrs. Welby:

I have | a lit | tle step | $\widetilde{\text{son}}$ | of on | ly three | years old. ‡

Here we dwell on the cæsure, *son*, just as long as it requires us to pronounce either of the preceding or succeeding iambusses. Its value, therefore, in this line, is that of three short syllables. In the following dactylic line its value is that of four short syllables.

Pale as a | lily was | Emily $\widetilde{\text{Gray}}$.

I have accented the cæsure with a (—) by way of expressing this variability of value.

I observed, just now that there could be no such foot as one of two short syllables. What we start from in the very beginning of all idea on the topic of verse, is quantity, *length*. Thus when we enunciate an independent syllable it is long, as a matter of course. If we enunciate two, dwelling on both equally, we express equality in the enumeration, or length, and have a right to call them two long syllables. If we dwell on one more than the other, we have also a right to call one short, because it is short in relation to the other. But if we dwell on both equally and with a tripping voice, saying to ourselves here are two short syllables, the query might well be asked of us—"in relation to what are they short?" Shortness is but the negation of length. To say, then, that two syllables, placed independently of any other syllable, are short, is merely to say that they have no positive length, or enunciation—in other words that they are no syllables—that they do not exist at all. And if, persisting, we

add anything about their equality, we are merely floundering in the idea of an identical equation, where, x being equal to x , nothing is shown to be equal to zero. In a word, we can form no conception of a pyrrhic as of an independent foot. It is a mere chimera bred in the mad fancy of a pedant.

From what I have said about the equalization of the several feet of a *line*, it must not be deduced that any *necessity* for equality in time exists between the rhythm of *several* lines. A poem, or even a stanza, may begin with iam-busses, in the first line, and proceed with anapaests in the second, or even with the less accor-dant dactyls, as in the opening of quite a pretty specimen of verse by Miss Mary A. S. Aldrich:

The wa | ter li | ly sleeps | in pride |
Dōwn in thē dēpths ōf thē | āzūre | lake. |

Here *azure* is a spondee, equivalent to a dactyl; *lake* a cæsure.

I shall now best proceed in quoting the initial lines of Byron's "Bride of Abydos:"

Know ye the land where the cypress and myrtle
Are emblems of deeds that are done in their clime—
Where the rage of the vulture, the love of the turtle
Now melt into softness, now madden to crime?
Know ye the land of the cedar and vine,
Where the flowers ever blossom, the beams ever shine,
And the light wings of Zephyr, oppressed with perfume,
Wax faint o'er the gardens of Gul in their bloom?
Where the citron and olive are fairest of fruit
And the voice of the nightingale never is mute—

* * * * *
Where the virgins are soft as the roses they twine,
And all save the spirit of man is divine?

'Tis the land of the East—'tis the clime of the Sun—
 Can he smile on such deeds as his children have done:
 Oh, wild as the accents of lovers' farewell
 Are the hearts that they bear and the tales that they tell.

Now the flow of these lines, (as times go,) is very sweet and musical. They have been often admired, and justly—as times go—that is to say, it is a rare thing to find better versification of its kind. And where verse is pleasant to the ear, it is silly to find fault with it because it refuses to be scanned. Yet I have heard men, professing to be scholars, who made no scruple of abusing these lines of Byron's on the ground that they were musical in spite of *all law*. Other gentlemen, *not* scholars, abused "all law" for the same reason:—and it occurred neither to the one party nor to the other that the law about which they were disputing might possibly be no law at all—an ass of a law in the skin of a lion.

The Grammars said something about dactylic lines, and it was easily seen that *these* lines were at least meant for dactylic. The first one was, therefore, thus divided:

Knōw yě thě | lānd whěre thě | cȳprěss ānd | mȳrtlē. |

The concluding foot was a mystery; but the Prosodies said something about the dactylic "measure" calling now and then for a double rhyme; and the court of inquiry were content to rest in the double rhyme, without exactly perceiving what a double rhyme had to do with the question

* Poe's quotation.—EDITOR.

of an irregular foot. Quitting the first line, the second was thus scanned :

Are ĕmblĕms | ōf deēds thāt | āre dōne ĩn | thĕir clĭme. |

It was immediately seen, however, that *this* would not do:—it was at war with the whole emphasis of the reading. It could not be supposed that Byron, or any one in his senses, intended to place stress upon such monosyllables as “are,” “of,” and “their,” nor could “their clime,” collated with “to crime,” in the corresponding line below, be fairly twisted into anything like a “double rhyme,” so as to bring everything within the category of the Grammars. But farther these Grammars spoke not. The inquirers, therefore, in spite of their sense of harmony in the lines, when considered without reference to scansion, fell back upon the idea that the “Are” was a blunder—an excess for which the poet should be sent to Coventry—and, striking it out, they scanned the remainder of the line as follows:

—ĕmblĕms ōf | deēds thāt āre | dōne ĩn thĕir clĭme. |

This answered pretty well; but the Grammars admitted no such foot as a foot of one syllable; and besides the rhythm was dactylic. In despair, the books are well searched, however, and at last the investigators are gratified by a full solution of the riddle in the profound “Observation” quoted in the beginning of this article:—“When

a syllable is wanting, the verse is said to be catalectic; when the measure is exact, the line is acatalectic; when there is a redundant syllable it forms hypermeter." This is enough. The anomalous line is pronounced to be catalectic at the head and to form hypermeter at the tail:— and so on, and so on; it being soon discovered that nearly all the remaining lines are in a similar predicament, and that what flows so smoothly to the ear, although so roughly to the eye, is, after all, a mere jumble of catalecticism, acatalecticism, and hypermeter—not to say worse.

Now, had this court of inquiry been in possession of even the shadow of the *philosophy* of Verse, they would have had no trouble in reconciling this oil and water of the eye and ear, by merely scanning the passage without reference to lines, and, continuously, thus:

Know ye the | land where the | cypress and | myrtle
Are | emblems of | deeds that are | done in their | clime
Where the | rage of the | vulture the | love of the |
turtle Now | melt into | softness now | madden to |
crime | Know ye the | land of the | cedar and | vine
Where the | flowers ever | blossom the | beams ever |
shine Where the | light wings of | Zephyr op | pressed
by per | *fume Wax* | faint o'er the | gardens of | Gul in
their | bloom Where the | citron and | olive are | fairest
of | fruit And the | voice of the | nightingale | never is
| mute Where the | virgins are | soft as the | roses they
| *twine* And | all save the | spirit of | man is di | vine
'Tis the | land of the | East 'tis the | clime of the | Sun
Can he | smile on such | deeds as his | children have |
done Oh | wild as the | accents of | lovers' fare | well
Are the | hearts that they | bear and the | tales that
they | tell.

Here "crime" and "tell" (italicised) are cæsuras, each having the value of a dactyl, four short syllables; while "fume wax," "twine and," and "done Oh," are spondees which, of course, being composed of two long syllables, are also equal to four short, and are the dactyl's natural equivalent. The nicety of Byron's ear has led him into a succession of feet which, with two trivial exceptions as regards the melody, are absolutely accurate—a very rare occurrence this in dactylic or anapæstic rhythms. The exceptions are found in the spondee "*twine And,*" and the dactyl, "*smile on such.*" Both feet are false in point of melody. In "*twine And,*" to make out rhythm, we must force "*And*" into a length which it will not naturally bear. We are called on to sacrifice either the proper length of the syllable as demanded by its position as a member of a spondee, or the customary accentuation of the word in conversation. There is no hesitation, and should be none. We at once give up the sound for the sense; and the rhythm is imperfect. In this instance it is *very* slightly so;—not one person in ten thousand could, by ear, detect the inaccuracy. But the *perfection* of verse, as regards melody, consists in its *never* demanding any such sacrifice as is here demanded. The rhythmical must agree, *thoroughly*, with the reading, flow. This perfection has in no instance been attained—but is unquestionably attainable. "*Smile on such,*" the dactyl, is incorrect, because "*such,*" from the character of the two consonants *ch*, cannot easily be enunciated in the ordinary time of

a short syllable, which its position declares that it is. Almost every reader will be able to appreciate the slight difficulty here; and yet the error is by no means so important as that of the “*And*” in the spondee. By dexterity we *may* pronounce “*such*” in the true time; but the attempt to remedy the rhythmical deficiency of the *And* by drawing it out, merely aggravates the offence against natural enunciation, by directing attention to the offence.

My main object, however, in quoting these lines, is to show that, in spite of the Prosodies, the length of a line is entirely an arbitrary matter. We might divide the commencement of Byron’s poem thus:

Know ye the | land where the. |

or thus:

Know ye the | land where the | cypress and. |

or thus:

Know ye the | land where the | cypress and | myrtle
are. |

or thus:

Know ye the | land where the | cypress and | myrtle
are | emblems of. |

In short, we may give it any division we please, and the lines will be good—provided we have at least *two* feet in a line. As in mathematics two units are required to form number, so rhythm,

(from the Greek ἀριθμός, number,) demands for its formation at least two feet. Beyond doubt, we often see such lines as

Know ye the—
Land where the—

lines of one foot; and our Prosodies admit such; but with impropriety; for common sense would dictate that every so obvious division of a poem as is made by a line, should include within itself all that is necessary for its own comprehension; but in a line of one foot we can have no appreciation of *rhythm*, which depends upon the equality between *two* or more pulsations. The false lines, consisting sometimes of a single cæsure, which are seen in mock Pindaric odes, are of course “rhythmical” only in connection with some other line; and it is this want of independent rhythm which adapts them to the purposes of burlesque alone. Their effect is that of incongruity (the principle of mirth;) for they include the blankness of prose amid the harmony of verse.

My second object in quoting Byron’s lines, was that of showing how absurd it often is to cite a single line from amid the body of a poem, for the purpose of instancing the perfection or imperfection of the line’s rhythm. Were we to see by itself

Know ye the land where the cypress and myrtle,

we might justly condemn it as defective in the
X. 4

final foot, which is equal to only three, instead of being equal to four, short syllables.

In the foot (*flowers ever*) we shall find a further exemplification of the principle of the bastard iambus, bastard trochee and quick trochee, as I have been at some pains in describing these feet above. All the Prosodies on English verse would insist upon making an elision in "flowers," thus (flow'rs,) but this is nonsense. In the quick trochee (mǎnŷ āre thē) occurring in Mr. Cranch's *trochaic* line, we had to equalize the time of the three syllables (*ny, are, the,*) to that of the one *short* syllable whose position they usurp. Accordingly each of these syllables is equal to the third of a short syllable, that is to say, the *sixth of a long*. But in Byron's *dactylic* rhythm, we have to equalize the time of the three syllables (*ers, ev, er,*) to that of the one *long* syllable whose position they usurp, or (which is the same thing,) of the *two short*. Therefore the value of each of the syllables (*ers, ev, and er*) is the *third of a long*. We enunciate them with only half the rapidity we employ in enunciating the three final syllables of the quick trochee—which latter is a rare foot. The "*flowers ever,*" on the contrary, is as common in the dactylic rhythm as is the *bastard* trochee in the trochaic, or the bastard iambus in the iambic. We may as well accent it with the curve of the crescent to the right, and call it a *bastard dactyl*. A *bastard anapæst*, whose nature I now need be at no trouble in explaining, will of course occur, now and then, in an anapæstic rhythm.

In order to avoid any chance of that confusion which is apt to be introduced in an essay of this kind by too sudden and radical an alteration of the conventionalities to which the reader has been accustomed, I have thought it right to suggest for the accent marks of the bastard trochee, bastard iambus, etc., etc., certain characters which, in merely varying the direction of the ordinary short accent (˘) should imply, what is the fact, that the feet themselves are not *new* feet, in any proper sense, but simply modifications of the feet, respectively, from which they derive their names. Thus a bastard iambus is, in its essentiality, that is to say, in its time, an iambus. The variation lies only in the *distribution* of this time. The time, for example, occupied by the one short (or *half of long*) syllable, in the ordinary iambus, is, in the bastard, spread equally over two syllables, which are accordingly the *fourth of long*.

But this fact—the fact of the essentiality, or whole time, of the foot being unchanged, is now so fully before the reader, that I may venture to propose, finally, an accentuation which shall answer the real purpose—that is to say, what should be the real purpose of all accentuation—the purpose of expressing to the eye the exact relative value of every syllable employed in Verse.

I have already shown that enunciation, or *length*, is the point from which we start. In other words, we begin with a *long syllable*. This then is our unit; and there will be no need of

accenting it at all. An unaccented syllable, in a system of accentuation, is to be regarded always as a long syllable. Thus a spondee would be without accent. In an iambus, the first syllable being "short," or the *half* of long, should be accented with a small 2, placed *beneath* the syllable; the last syllable, being long, should be unaccented;—the whole would be thus (control).

In a trochæe, these accents would be merely conversed, thus (manly). In a dactyl, each of the

two final syllables, being the half of long, should, also, be accented with a small 2 beneath the syllable; and, the first syllable left unaccented, the whole would be thus (happiness).

In an anapæst we should converse the dactyl thus, (in the land).

In the bastard dactyl, each of the three concluding syllables being the *third* of long, should be accented with a small 3 beneath the syllable and the whole foot would stand thus, (flowers ever).

In the bastard anapæst we should converse the bastard dactyl thus, (in the rebound).

In the bastard iambus, each of the two initial syllables, being the fourth of long, should be accented, below with a small 4; the whole foot would be thus, (in the rain).

bastard trochee, we should converse the bastard iambus thus, (many a). In the quick trochee,

each of the three concluding syllables, being the *sixth* of long, should be accented, below, with a small 6; the whole foot would be thus, (many

are the). The quick iambus is not yet created,

and most probably never will be; for it will be excessively useless, awkward, and liable to misconception—as I have already shown that even the quick trochee is:—but, should it appear, we must accent it by conversing the quick trochee. The cæsura, being variable in length, but always *longer than “long,”* should be accented, *above*, with a number expressing the length, or value, of the distinctive foot of the rhythm in which it occurs. Thus a cæsura, occurring in a spondaic rhythm, would be accented with a small 2 above the syllable, or, rather, foot. Occurring in a dactylic or anapæstic rhythm, we also accent it with the 2, above the foot. Occurring in an iambic rhythm, however, it must be accented, above, with $1\frac{1}{2}$; for this is the relative value of the iambus. Occurring in the trochaic rhythm, we give it, of course, the same accentuation. For the complex $1\frac{1}{2}$, however, it would be advisable to substitute the simpler expression $\frac{3}{2}$ which amounts to the same thing.

In this system of accentuation Mr. Cranch's lines, quoted above, would thus be written:

Many are the | thoughts that | come to | me³

In my | lonely | musing |

And they | drift so | strange and | swift⁸

There's no | time for | choosing

Which to | follow | for to | leave²

Any | seems a | losing. |
 2 2 2

In the ordinary system the accentuation would be thus:

Māny arē thě | thōughts thăt | cōme tǒ | mē

In mǎ | lōnelǎ | mǔsǐng, |

And they | drift sō | strānge ānd | swift!

Thēre's nō | tīme fōr | choōsing |

Which tō | fōllōw, | fōr tō | lēave

Ānỹ, | seēms ā | lōsing. |

It must be observed, here, that I do not grant this to be the "ordinary" *scansion*. On the contrary, I never yet met the man who had the faintest comprehension of the true scanning of these lines, or of such as these. But granting this to be the mode in which our Prosodies would divide the feet, they would accentuate the syllables as just above.

Now, let any reasonable person compare the two modes. The first advantage seen in my mode is that of simplicity—of time, labor, and ink saved. Counting the fractions as *two* accents, even, there will be found only *twenty-six*

accents to the stanza. In the common accentuation there are *forty-one*. But admit that all this is a trifle, which it is *not*, and let us proceed to points of importance. Does the common accentuation express the truth, in particular, in general, or in any regard? Is it consistent with itself? Does it convey either to the ignorant or to the scholar a just conception of the rhythm of the lines? Each of these questions must be answered in the negative. The crescents, being precisely similar, must be understood as expressing, all of them, one and the same thing: and so all prosodies have always understood them and wished them to be understood. They express, indeed, "short"—but this word has all kinds of meanings. It serves to represent (the reader is left to guess *when*) sometimes the half, sometimes the third, sometimes the fourth, sometimes the sixth, of "long"—while "long" itself, in the books, is left undefined and undescribed. On the other hand, the horizontal accent, it may be said, expresses sufficiently well, and unvaryingly, the syllables which are meant to be long. It does nothing of the kind. This horizontal accent is placed over the *cæsura* (wherever, as in the Latin Prosodies, the *cæsura* is recognised) as well as over the ordinary long syllable, and implies anything and everything, just as the crescent. But grant that it does express the ordinary long syllables, (leaving the *cæsura* out of question,) have I not given the identical expression, by not employing any expression at all? In a word, while the Prosodies, with a cer-

tain number of accents, express *precisely nothing whatever*, I, with scarcely half the number, have expressed everything which, in a system of accentuation, demands expression. In glancing at my mode in the lines of Mr. Cranch, it will be seen that it conveys not only the exact relation of the syllables and feet, among themselves, in those particular lines, but their precise value in relation to any other existing or conceivable feet or syllables, in any existing or conceivable system of rhythm.

The object of what we call *scansion* is the distinct marking of the rhythmical flow. Scansion with accents or perpendicular lines between the feet—that is to say scansion *by* the voice only—is scansion *to* the ear only; and all very good in its way. The written scansion addresses the ear through the eye. In either case the object is the distinct marking of the rhythmical, musical, or reading flow. There *can* be no other object and there is none. Of course, then, the scansion and the reading flow should go hand in hand. The former must agree with the latter. The former represents and expresses the latter; and is good or bad as it truly or falsely represents and expresses it. If by the written scansion of a line we are not enabled to perceive any rhythm or music in the line, then either the line is unrhythmical or the scansion false. Apply all this to the English lines which we have quoted, at various points, in the course of this article. It will be found that the scansion exactly conveys

the rhythm, and thus thoroughly fulfils the only purpose for which scansion is required.

But let the scansion of *the schools* be applied to the Greek and Latin verse and what result do we find?—that the verse is one thing and the scansion quite another. The ancient verse, *read* aloud, is in general musical, and occasionally *very* musical. *Scanned* by the Prosodial rules we can, for the most part, make nothing of it whatever. In the case of the English verse, the more emphatically we dwell on the divisions between the feet, the more distinct is our perception of the kind of rhythm intended. In the case of the Greek and Latin, the more we dwell the *less* distinct is this perception. To make this clear by an example:

Mæcenas, atavis editæ regibus,
O, et præsidium et dulce decus meum,
Sunt quos curriculo pulverem Olympicum
Collegisse juvat, metaque fervidis
Evitata rotis, palmaque nobilis
Terrarum dominos evehit ad Deos.

Now in *reading* these lines, there is scarcely one person in a thousand who, if even ignorant of Latin, will not immediately feel and appreciate their flow—their music. A prosodist, however, informs the public that the *scansion* runs thus:

Mæcæ | nas ata | vis | editæ | regibus |
O, et | præsidî' | et | dulce de | cus meum |
Sunt quos | curricu | lo | pulver' O | lympicum |
Colle | gisse | ju | vat | metaque | fervidis |
Evi | tata ro | tis | palmaque | nobilis |
Terra | rum domi | nos | evehit | ad Deos.—

Now I do not deny that we get a *certain sort* of music from the lines if we read them according to this scansion, but I wish to call attention to the fact that this scansion and the certain sort of music which grows out of it, are entirely at war not only with the reading flow which any ordinary person would naturally give the lines, but with the reading flow universally given them, and never denied them, by even the most obstinate and stolid of scholars.

And now these questions are forced upon us—“Why exists this discrepancy between the modern verse with its scansion, and the ancient verse with its scansion?”—“Why, in the former case, are there agreement and representation, while in the later there is neither the one nor the other?” or, to come to the point,—“How are we to reconcile the ancient verse with the scholastic scansion of it?” This absolutely necessary conciliation—shall we bring it about by supposing the scholastic scansion wrong because the ancient verse is right, or by maintaining that the ancient verse is wrong because the scholastic scansion is not to be gainsayed?

Were we to adopt the latter mode of arranging the difficulty, we might, in some measure, at least simplify the expression of the arrangement by putting it thus—Because the pedants have no eyes therefore the old poets had no ears.

“But,” say the gentlemen without the eyes, “the scholastic scansion, although certainly not handed down to us in form from the old poets themselves (the gentlemen without the ears,) is

nevertheless deduced from certain facts which are supplied us by careful observation of the old poems."

And let us illustrate this strong position by an example from an American poet—who must be a poet of some eminence, or he will not answer the purpose. Let us take Mr. Alfred B. Street. I remember these two lines of his:

His sinuous path, by blazes, wound
Among trunks grouped in myriads round.

With the *sense* of these lines I have nothing to do. When a poet is in a "fine frenzy," he may as well imagine a large forest as a small one—and "by blazes!" is *not* intended for an oath. My concern is with the rhythm, which is iambic.

Now let us suppose that, a thousand years hence, when the "American language" is dead, a learned prosodist should be deducing from "careful observation" of our best poets, a system of scansion for our poetry. And let us suppose that this prosodist had so little dependence in the generality and immutability of the laws of Nature, as to assume in the outset, that, because we lived a thousand years before his time, and made use of steam-engines instead of mesmeric balloons, we must therefore have had a *very* singular fashion of mouthing our vowels, and altogether of hudsonizing our verse. And let us suppose that with these and other fundamental propositions carefully put away in his brain, he should arrive at the line,—

Among | trunks grouped | in my | riads round.

Finding it an obviously iambic rhythm, he would divide it as above; and observing that "trunks" made the first membe. of an iambus, he would call it short, as Mr. Street intended it to be. Now farther:—if instead of admitting the possibility that Mr. Street, (who by that time would be called Street simply, just as we say Homer,)—that Mr. Street might have been in the habit of writing carelessly, as the poets of the prosodist's own era did, and as all poets will do (on account of being geniuses,)—instead of admitting this suppose the learned scholar should make a "rule" and put it in a book, to the effect that, in the American verse, the vowel *u*, *when found imbedded among nine consonants*, was short: what, under such circumstances, would the sensible people of the scholar's day have a right not only to think, but to say of that scholar?—why, that he was "a fool—by blazes!"

I have put an extreme case, but it strikes at the root of the error. The "rules" are grounded in "authority;" and this "authority"—can any one tell us what it means? or can any one suggest anything that it may *not* mean? Is it not clear that the "scholar" above referred to, might as readily have deduced from authority a totally false system as a partially true one? To deduce from authority a consistent prosody of the ancient metres would indeed have been within the limits of the barest possibility; and the task has *not* been accomplished, for the reason that it demands a species of ratiocination altogether out of keeping with the brain of a bookworm. A

rigid scrutiny will show that the very few "rules" which have not as many exceptions as examples, are those which have, by accident, their true bases not in authority, but in the omniprevalent laws of syllabification; such, for example, as the rule which declares a vowel before two consonants to be long.

In a word, the gross confusion and antagonism of the scholastic prosody, as well as its marked inapplicability to the reading flow of the rhythms it pretends to illustrate, are attributable, first, to the utter absence of natural principle as a guide in the investigations which have been undertaken by inadequate men; and secondly, to the neglect of the obvious consideration that the ancient poems, which have been the *criteria* throughout, were the work of men who must have written as loosely, and with as little definitive system, as ourselves.

Were Horace alive to-day, he would divide for us his first Ode thus, and "make great eyes" when assured by the prosodists that he had no business to make any such division!

Mæcenas | atavis | edite | regibus |
 2 2 2 2 2 2 2 2
 O et præ | sidium et | dulce de | cus meum |
 2 2 3 3 3 2 2 2 2
 Sunt quos cur | riculo | pulverem O | lympticum |
 2 2 2 2 3 3 2 2
 Collegisse | juvat | metaque | fervidis |
 2 3 3 2 2 2 2
 Evitata | rotis | palmaque | nobilis |
 2 3 3 2 2 2 2
 Terrarum | dominos | evehit | ad Deos. |
 2 2 2 2 2 2 2 2

Read by this scansion, the flow is preserved; and the more we dwell on the divisions, the more the intended rhythm becomes apparent. Moreover, the feet have all the same time; while, in the scholastic scansion, trochees—admitted trochees—are absurdly employed as equivalents to spondees and dactyls. The books declare, for instance, that *Colle*, which begins the fourth line, is a trochee, and seem to be gloriously unconscious that to put a trochee in opposition with a longer foot, is to violate the inviolable principle of all music, *time*.

It will be said, however, by “some people,” that I have no business to make a dactyl out of such obviously long syllables as *sunt*, *quos*, *cur*. Certainly I have no business to do so. I *never* do so. And Horace should not have done so. But he did. Mr. Bryant and Mr. Longfellow do the same thing every day. And merely because these gentlemen, now and then, forget themselves in this way, it would be hard if some future prosodist should insist upon twisting the “Thanatopsis,” or the “Spanish Student,” into a jumble of trochees, spondees, and dactyls.

It may be said, also, by some other people, that in the word *decus*, I have succeeded no better than the books, in making the scansional agree with the reading flow; and that *decus* was not pronounced *decus*. I reply, that there can be no doubt of the word having been pronounced, in this case, *decus*. It must be observed, that the Latin inflection, or variation of a word in its terminating syllables, caused the Romans—*must*

have caused them, to pay greater attention to the termination of a word than to its commencement, or than we do to the terminations of our words. The end of the Latin word established that relation of the word with other words which we establish by prepositions or auxiliary verbs. Therefore, it must seem infinitely less odd to them than it does to us, to dwell at any time, for any slight purpose, abnormally, on a terminating syllable. In verse, this license—scarcely a license—would be frequently admitted. These ideas unlock the secret of such lines as the

Litoreis ingens inventa sub ilicibus sus,

and the

Parturiunt montes et nascitur ridiculus mus.

which I quoted, some time ago, while speaking of rhyme.

As regards the prosodial elisions such as that of *rem* before *O*, in *pulverem Olympicum*, it is really difficult to understand how so dismally silly a notion could have entered the brain even of a pedant. Were it demanded of me why the books cut off one *vowel* before another, I might say—It is, perhaps, because the books think that, since a bad reader is so apt to slide the one vowel into the other at any rate, it is just as well to print them *ready-slided*. But in the case of the terminating *m*, which is the most readily pronounced of all consonants, (as the infantile *mamma* will testify,) and the most impossible to cheat the ear of by any system of sliding—in the

case of the *m*, I should be driven to reply that, to the best of my belief, the prosodists did the thing, because they had a fancy for doing it, and wished to see how funny it would look after it was done. The thinking reader will perceive that, from the great facility with which *em* may be enunciated, it is admirably suited to form one of the rapid short syllables in the bastard dactyl (pulverem O;) but because the books had no con-

ception of a bastard dactyl, they knocked it in the head at once—by cutting off its tail!

Let me now give a specimen of the true scansion of another Horatian measure—embodying an instance of proper elision.

Integer | vitæ | scelerisque | purus |
 2 2 3 3 2

Non eget | Mauri | jaculis ne | que arcu |
 2 2 2 3 3

Nec vene | natis | gravis sa | gittis,
 2 2 3 3 3

Fusce pha | retrâ.
 2 2

Here the regular recurrence of the bastard dactyl, gives great animation to the rhythm. The *e* before the *a* in *que arcu*, is, almost of sheer necessity, cut off—that is to say, run into the *a* so as to preserve the spondee. But even this license it would have been better not to take.

Had I space, nothing would afford me greater pleasure than to proceed with the scansion of *all* the ancient rhythms, and to show how easily, by the help of common sense, the intended music of each and all can be rendered instantaneously ap-

parent. But I have already overstepped my limits, and must bring this paper to an end.

It will never do, however, to omit all mention of the heroic hexameter.

I began the "processes" by a suggestion of the spondee as the first step towards verse. But the innate monotony of the spondee has caused its disappearance, as the basis of rhythm, from all modern poetry. We *may* say, indeed, that the French heroic—the most wretchedly monotonous verse in existence—is, to all intents and purposes, spondaic. But it is not designedly spondaic—and if the French were ever to examine it at all, they would no doubt pronounce it iambic. It must be observed, that the French language is strangely peculiar in this point—that *it is without accentuation, and consequently without verse*. The genius of the people, rather than the structure of the tongue, declares that their words are, for the most part, enunciated with an uniform dwelling on each syllable. For example—we say, "syllabification." A Frenchman would say, syl-la-bi-fi-ca-ti-on; dwelling on no one of the syllables with any noticeable particularity. Here again I put an extreme case, in order to be well understood; but the general fact is as I give it—that, comparatively, the French have *no* accentuation. And there can be nothing worth the name of verse, without. Therefore, the French have no verse worth the name—which is the fact, put in sufficiently plain terms. Their iambic rhythm so superabounds in absolute spondees, as to warrant me in calling its basis

spondaic; but French is the *only* modern tongue which has any rhythm with such basis; and even in the French, it is, as I have said, unintentional.

Admitting, however, the validity of my suggestion, that the spondee was the first approach to verse, we should expect to find, first, natural spondees (words each forming just a spondee,) most abundant in the most ancient languages; and, secondly, we should expect to find spondees forming the basis of the most ancient rhythms. These expectations are in both cases confirmed.

Of the Greek hexameter, the intentional basis is spondaic. The dactyls are the *variation* of the theme. It will be observed that there is no absolute certainty about *their* points of interposition. The penultimate foot, it is true, is usually a dactyl; but not uniformly so; while the ultimate, on which the ear *lingers*, is always a spondee. Even that the penultimate is usually a dactyl may be clearly referred to the necessity of winding up with the *distinctive* spondee. In corroboration of this idea, again, we should look to find the penultimate spondee most usual in the most ancient verse; and, accordingly, we find it more frequent in the Greek than in the Latin hexameter.

But besides all this, spondees are not only more prevalent in the heroic hexameter than dactyls, but occur to such an extent as is even unpleasant to modern ears, on account of monotony. What the modern chiefly appreciates and admires in the Greek hexameter, is the *melody of the abundant vowel sounds*. The Latin hexam-

eters *really* please very few moderns—although so many pretend to fall into ecstasies about them. In the hexameters quoted, several pages ago, from Silius Italicus, the preponderance of the spondee is strikingly manifest. Besides the natural spondees of the Greek and Latin, numerous artificial ones arise in the verse of these tongues on account of the tendency which inflection has to throw full accentuation on terminal syllables; and the preponderance of the spondee is farther ensured by the comparative infrequency of the small prepositions which *we* have to serve us *instead* of case, and also the absence of the diminutive auxiliary verbs with which *we* have to eke out the expression of our primary ones. These are the monosyllables whose abundance serve to stamp the poetic genius of a language as tripping or dactylic.

Now paying no attention to these facts, Sir Philip Sidney, Professor Longfellow, and innumerable other persons more or less modern, have busied themselves in constructing what they supposed to be “English hexameters on the model of the Greek.” The only difficulty was that (even leaving out of question the melodious masses of vowel,) these gentlemen never could get their English hexameters to *sound* Greek. Did they *look* Greek?—that should have been the query; and the reply might have led to a solution of the riddle. In placing a copy of ancient hexameters side by side with a copy (in similar type) of such hexameters as Professor Longfellow, or Professor Felton, or the Frogpondian

Professors collectively, are in the shameful practice of composing "on the model of the Greek," it will be seen that the latter (hexameters, not professors) are about one-third longer *to the eye*, on an average, than the former. The more abundant dactyls make the difference. And it is the greater number of spondees in the Greek than in the English—in the ancient than in the modern tongue—which has caused it to fall out that while these eminent scholars were groping about in the dark for a Greek hexameter, which is a spondaic rhythm varied now and then by dactyls, they merely stumbled, to the lasting scandal of scholarship, over something which, on account of its long-leggedness, we may as well term a Feltonian hexameter, and which is a dactylic rhythm, interrupted, rarely, by artificial spondees which are no spondees at all, and which are curiously thrown in by the heels at all kinds of improper and impertinent points.

Here is a specimen of the Longfellowian hexameter.

Also the | church with | in was a | dorned for | this was
 the | season |
 In which the | young their | parents' | hope and the |
 loved ones of | Heaven | *
 Should at the | foot of the | altar re | new the | vows of
 their | baptism |
 Therefore each | nook and | corner was | swept and |
 cleaned and the | dust was |
 Blown from the | walls and | ceiling and | from the |
 oil-painted | benches. |

* Poe's quotation.—EDITOR.

Mr. Longfellow is a man of imagination—but *can* he imagine that any individual, with a proper understanding of the danger of lockjaw, would make the attempt of twisting his mouth into the shape necessary for the emission of such spondee as “*parents*,” and “*from the*,” or such dactyls as “*cleaned and the*” and “*loved ones of?*” “*Baptism*” is by no means a bad spondee—perhaps because it happens to be a dactyl;—of all the rest, however, I am dreadfully ashamed.

But these feet—dactyls and spondees, all together,—should thus be put at once into their proper position:

“Also, the church within was adorned; for this was the season in which the young, their parents’ hope, and the loved ones of Heaven, should, at the feet of the altar, renew the vows of their baptism. Therefore, each nook and corner was swept and cleaned; and the dust was blown from the walls and ceiling, and from the oil-painted benches.”

There!—That is respectable prose; and it will incur no danger of ever getting its character ruined by any body’s mistaking it for verse.

But even when we let these modern hexameters go, as Greek, and merely hold them fast in their proper character of Longfellowian, or Feltonian, or Frogpondian, we must still condemn them as having been committed in a radical misconception of the philosophy of verse. The spondee, as I observed, is the *theme* of the Greek line. Most of the ancient hexameters *begin* with spondees, for the reason that the spondee is the theme; and the ear is filled with it as with a

burden. Now the Feltonian dactyls have, in the same way, dactyls for the theme, and most of them begin with dactyls—which is all very proper if not very Greek—but, unhappily, the one point at which they *are* very Greek is that point, precisely, at which they should be nothing but Feltonian. They always *close* with what is meant for a spondee. To be consistently silly, this should die off in a dactyl.

That a truly Greek hexameter *cannot*, however, be readily composed in English, is a proposition which I am by no means inclined to admit. I think I could manage the point myself. For example:

Do tell! | when may we | hope to make | men of sense |
 out of the | Pundits |
 Born and brought | up with their | snouts deep | down
 in the | mud of the | Frog-pond?
 Why ask? | who ever | yet saw | money made | out of a
 | fat old |
 Jew, or | downright | upright | nutmegs | out of a |
 pine-knot?

The proper spondee predominance is here preserved. Some of the dactyls are not so good as I could wish—but, upon the whole, the rhythm is very decent—to say nothing of its excellent sense.

OLD ENGLISH POETRY*

[Published in the *Broadway Journal*, May 17, 1845.]

It should not be doubted that least one-third of the affection with which we regard the elder poets of Great Britain should be attributed to what is, in itself, a thing apart from poetry—we mean to the simple love of the antique—and that, again, a third of even the proper *poetic sentiment* inspired by their writings, should be ascribed to a fact which, while it has strict connection with poetry in the abstract, and with the old British poems themselves, should not be looked upon as a merit appertaining to the authors of the poems. Almost every devout admirer of the old bards, if demanded his opinion of their productions, would mention vaguely, yet with perfect sincerity, a sense of dreamy, wild, indefinite, and he would perhaps say, indefinable delight; on being required to point out the source of this so shadowy pleasure, he would be apt to speak of the quaint in phraseology, and in general handling. This quaintness is, in fact,

* A review of "The Book of Gems," edited by S. C. Hall.

a very powerful adjunct to ideality, but in the case in question it arises independently of the author's will, and is altogether apart from his intention. Words and their rhythm have varied. Verses which affect us to-day with a vivid delight, and which delight, in many instances, may be traced to the one source, quaintness, must have worn in the days of their construction, a very commonplace air. This is, of course, no argument against the poems *now*—we mean it only as against the poets *then*. There is a growing desire to overrate them. The old English muse was frank, guileless, sincere, and although very learned, still learned without art. No general error evinces a more thorough confusion of ideas than the error of supposing Donne and Cowley metaphysical in the sense wherein Wordsworth and Coleridge are so. With the two former ethics were the end—with the two latter the means. The poet of the "Creation" wished, by highly artificial verse, to inculcate what he supposed to be moral truth—the poet of the "Ancient Mariner" to infuse the Poetic Sentiment through channels suggested by analysis. The one finished by complete failure what he commenced in the grossest misconception; the other, by a path which could not possibly lead him astray, arrived at a triumph which is not the less glorious because hidden from the profane eyes of the multitude. But in this view even the "metaphysical verse" of Cowley is but evidence of the simplicity and single-heartedness of the man. And he was in this but a type of his

school—for we may as well designate in this way the entire class of writers whose poems are bound up in the volume before us, and throughout all of whom there runs a very perceptible general character. They used little art in composition. Their writings sprang immediately from the soul—and partook intensely of that soul's nature. Nor is it difficult to perceive the tendency of this *abandon*—to elevate immeasurably all the energies of mind—but, again, so to mingle the greatest possible fire, force, delicacy, and all good things, with the lowest possible bathos, baldness, and imbecility, as to render it not a matter of doubt that the average results of mind in such a school will be found inferior to those results in one (*ceteris paribus*) more artificial.

We cannot bring ourselves to believe that the selections of the "Book of Gems" are such as will impart to a poetical reader the clearest possible idea of the beauty of the *school*—but if the intention had been merely to show the school's character, the attempt might have been considered successful in the highest degree. There are long passages now before us of the most despicable trash, with no merit whatever beyond that of their antiquity. The criticisms of the editor do not particularly please us. His enthusiasm is too general and too vivid not to be false. His opinion, for example, of Sir Henry Wotton's "Verses on the Queen of Bohemia"—that "there are few finer things in our language," is untenable and absurd.

"You meaner beauties of the Night
That poorly satisfy our eyes
More by your number than your light.
You common people of the skies,
What are you when the sun shall rise?

"You curious chanters of the wood
That warble forth dame Nature's lays,
Thinking your passions understood
By your weak accents—what's your praise
When Philomel her voice shall raise?

"You violets that first appear,
By your pure purple mantles known,
Like the proud virgins of the year,
As if the spring were all your own,
What are you when the rose is blown?

"So, when my mistress shall be seen,
In sweetness of her looks and mind,
By virtue first, then choice, a queen,
Tell me if she were not designed
Th' eclipse and glory of her kind?"

In such lines we can perceive not one of those higher attributes of Poesy which belong to her in all circumstances and throughout all time. Here everything is art, nakedly, or but awkwardly concealed. No prepossession for the mere antique (and in this case we can imagine no other prepossession) should induce us to dignify with the sacred name of poetry, a series, such as this, of elaborate and threadbare compliments, stitched, apparently, together, without fancy, without plausibility, and without even an attempt at adaptation.

In common with all the world, we have been much delighted with "The Shepherd's Hunting" by Withers—a poem partaking, in a remarkable degree, of the peculiarities of *Il Penseroso*. Speaking of Poesy, the author says:—

"By the murmur of a spring,
 Or the least boughs rusteling,
 By a daisy whose leaves spread,
 Shut when Titan goes to bed,
 Or a shady bush or tree,
 She could more infuse in me
 Than all Nature's beauties can
 In some other wiser man.
 By her help I also now
 Make this churlish place allow
 Something that may sweeten gladness
 In the very gall of sadness—
 The dull loneliness, the black shade,
 That these hanging vaults have made
 The strange music of the waves
 Beating on these hollow caves,
 This black den which rocks emboss,
 Overgrown with eldest moss,
 The rude portals that give light
 More to terror than delight,
 This my chamber of neglect
 Walled about with disrespect;
 From all these and this dull air
 A fit object for despair,
 She hath taught me by her might
 To draw comfort and delight."

But these lines, however good, do not bear with them much of the general character of the English antique. Something more of this will be found in Corbet's "Farewell Rewards and Fairies!" We copy a portion of Marvell's "Maiden Lamenting for her Fawn," which we prefer—not only as a specimen of the elder poets, but in itself as a beautiful poem, abounding in pathos, exquisitely delicate imagination and truthfulness—to anything of its species:—

"It is a wondrous thing how fleet
 'Twas on those little silver feet,
 With what a pretty skipping grace
 It oft would challenge me the race,
 And when't had left me far away
 'Twould stay, and run again, and stay;
 For it was nimbler much than hinds,
 And trod as if on the four winds.
 I have a garden of my own,
 But so with roses overgrown.

And lilies, that you would it guess
 To be a little wilderness;
 And all the spring-time of the year
 It only loved to be there.
 Among the beds of lilies I
 Have sought it oft where it should lie,
 Yet could not, till itself would rise,
 Find it, although before mine eyes.
 For in the flaxen lilies shade
 It like a bank of lilies laid;
 Upon the roses it would feed
 Until its lips even seemed to bleed,
 And then to me 'twould boldly trip,
 And print those roses on my lip,
 But all its chief delight was still
 With roses thus itself to fill,
 And its pure virgin limbs to fold
 In whitest sheets of lilies cold.
 Had it lived long, it would have been
 Lilies without, roses within."

How truthful an air of lamentations hangs here upon every syllable! It pervades all. It comes over the sweet melody of the words—over the gentleness and grace which we fancy in the little maiden herself—even over the half-playful, half-petulant air with which she lingers on the beauties and good qualities of her favorite—like the cool shadow of a summer cloud over a bed of lilies and violets, "and all sweet flowers." The whole is redolent with poetry of a very lofty order. Every line is an idea conveying either the beauty and playfulness of the fawn, or the artlessness of the maiden, or her love, or her admiration, or her grief, or the fragrance and warmth and *appropriateness* of the little nest-like bed of lilies and roses which the fawn devoured as it lay upon them, and could scarcely be distinguished from them by the once happy little damsel who went to seek her pet with an arch and rosy smile on her face. Consider the great variety of truth-

ful and delicate thought in the few lines we have quoted—the *wonder* of the little maiden at the fleetness of her favorite—the “little silver feet”—the fawn challenging his mistress to a race with “a pretty skipping grace,” running on before, and then, with head turned back, awaiting her approach only to fly from it again—can we not distinctly perceive all these things? How exceedingly vigorous, too, is the line,

“And trod as if on the four winds’ ”

A vigor apparent only when we keep in mind the artless character of the speaker and the four feet of the favorite, one for each wind. Then consider the garden of “my own,” so overgrown, entangled with roses and lilies, as to be “a little wilderness”—the fawn loving to be there, and there “only”—the maiden seeking it “where it *should* lie”—and not being able to distinguish it from the flowers until “itself would rise”—the lying among the lilies “like a bank of lilies”—the loving to “fill itself with roses,”

“And its pure virgin limbs to fold
In whitest sheets of lilies cold,”

and these things being its “chief” delights—and then the pre-eminent beauty and naturalness of the concluding lines, whose very hyperbole only renders them more true to nature when we consider the innocence, the artlessness, the enthusiasm, the passionate girl, and more passionate admiration of the bereaved child—

“Had it lived long, it would have been
Lilies without, roses within.”

MAELZEL'S CHESS-PLAYER

[Published in the *Southern Literary Messenger*, April, 1836.]

PERHAPS no exhibition of the kind has ever elicited so general attention as the Chess-Player of Maelzel. Wherever seen it has been an object of intense curiosity to all persons who think. Yet the question of its *modus operandi* is still undetermined. Nothing has been written on this topic which can be considered as decisive—and accordingly we find everywhere men of mechanical genius, of great general acuteness and discriminative understanding, who make no scruple in pronouncing the Automaton a *pure machine*, unconnected with human agency in its movements, and consequently, beyond all comparison, the most astonishing of the inventions of mankind. And such it would undoubtedly be, were they right in their supposition. Assuming this hypothesis, it would be grossly absurd to compare with the Chess-Player any similar thing of either modern or ancient days. Yet there have been many and wonderful automata. In Brewster's "Letters on Natural Magic," we have an account of the most remarkable. Among these

may be mentioned, as having beyond doubt existed, firstly, the coach invented by M. Camus for the amusement of Louis XIV. when a child. A table, about four feet square, was introduced into the room and appropriated for the exhibition. Upon this table was placed a carriage six inches in length, made of wood, and drawn by two horses of the same material. One window being down, a lady was seen on the back seat. A coachman held the reins on the box, and a footman and page were in their places behind. M. Camus now touched a spring; whereupon the coachman smacked his whip, and the horses proceeded in a natural manner along the edge of the table, drawing after them the carriage. Having gone as far as possible in this direction, a sudden turn was made to the left, and the vehicle was driven at right angles to its former course, and still closely along the edge of the table. In this way the coach proceeded until it arrived opposite the chair of the young prince. It then stopped, the page descended and opened the door, the lady alighted and presented a petition to her sovereign. She then re-entered. The page put up the steps, closed the door, and resumed his station. The coachman whipped his horses, and the carriage was driven back to its original position.

The Magician of M. Maillardet is also worthy of notice. We copy the following account of it from the "Letters" before mentioned of Dr. B., who derived his information principally from the "Edinburgh Encyclopædia."

"One of the most popular pieces of mechan-

ism which we have seen, is the Magician constructed by M. Maillardet, for the purpose of answering certain given questions. A figure, dressed like a magician, appears seated at the bottom of a wall, holding a wand in one hand, and a book in the other. A number of questions, ready prepared, are inscribed on oval medallions, and the spectator takes any of these he chooses, and to which he wishes an answer, and having placed it in a drawer ready to receive it, the drawer shuts with a spring till the answer is returned. The magician then arises from his seat, bows his head, describes circles with his wand, and consulting the book as if in deep thought, he lifts it toward his face. Having thus appeared to ponder over the proposed question, he raises his wand, and striking with it the wall above his head, two folding-doors fly open, and display an appropriate answer to the question. The doors again close, the magician resumes his original position, and the drawer opens to return the medallion. There are twenty of these medallions, all containing different questions, to which the magician returns the most suitable and striking answers. The medallions are thin plates of brass, of an elliptical form, exactly resembling each other. Some of the medallions have a question inscribed on each side, both of which the magician answers in succession. If the drawer is shut without a medallion being put in it, the magician rises, consults his book, shakes his head, and resumes his seat; the folding doors remain shut, and the drawer is returned empty. If two me-

dallions are put into the drawer together, an answer is returned only to the lower one. When the machinery is wound up, the movements continue about an hour, during which time about fifty persons may be answered. The inventor stated that the means by which the different medallions acted upon the machinery, so as to produce the proper answers to the questions which they contained, were extremely simple."

The Duck of Vaucanson was still more remarkable. It was of the size of life, and so perfect an imitation of the living animal that all the spectators were deceived. It executed, says Brewster, all the natural movements and gestures, it ate and drank with avidity, performed all the quick motions of the head and throat which are peculiar to the duck, and like it muddled the water which it drank with its bill. It produced also the sound of quacking in the most natural manner. In the anatomical structure the artists exhibited the highest skill. Every bone in the real duck had its representative in the automaton, and its wings were anatomically exact. Every cavity, apophysis, and curvature was imitated, and each bone executed its proper movements. When corn was thrown down before it, the duck stretched out its neck to pick it up, swallowed, and digested it.*

But if these machines were ingenious, what shall we think of the calculating machine of Mr.

* Under the head *Androides* in the "Edinburgh Encyclopædia" may be found a full account of the principal automata of ancient and modern times.

Babbage? What shall we think of an engine of wood and metal which can not only compute astronomical and navigation tables to any given extent, but render the exactitude of its operations mathematically certain through its power of correcting its possible errors? What shall we think of the machine which can not only accomplish all this, but actually print off its elaborate results, when obtained, without the slightest intervention of the intellect of man? It will, perhaps, be said in reply, that a machine such as we have described is altogether above comparison with the Chess-Player of Maelzel. By no means—it is altogether beneath it—that is to say, provided we assume (what should never for a moment be assumed) that the Chess-Player is a *pure machine*, and performs its operations without any immediate human agency. Arithmetical or algebraical calculations are, from their very nature, fixed and determinate. Certain *data* being given, certain results necessarily and inevitably follow. These results have dependence upon nothing, and are influenced by nothing but the *data* originally given. And the question to be solved proceeds, or should proceed, to its final determination, by a succession of unerring steps liable to no change, and subject to no modification. This being the case, we can without difficulty conceive the *possibility* of so arranging a piece of mechanism, that upon starting it in accordance with the *data* of the question to be solved, it should continue its movements, regularly, progressively, and undeviatingly toward the

required solution, since these movements, however complex, are never imagined to be otherwise than finite and determinate. But the case is widely different with the Chess-Player. With him there is no determinate progression. No one move in chess necessarily follows upon any one other. From no particular disposition of the men at one period of a game can we predicate their disposition at a different period. Let us place the *first move* in a game of chess, in juxtaposition with the *data* of an algebraical question, and their great difference will be immediately perceived. From the latter—from the *data*—the second step of the question, dependent thereupon, inevitably follows. It is modelled by the *data*. It must be *thus* and not otherwise. But from the first move in the game of chess no especial second move follows of necessity. In the algebraical question, as it proceeds toward solution, the *certainty* of its operations remains altogether unimpaired. The second step having been a consequence of the *data*, the third step is equally a consequence of the second, the fourth of the third, the fifth of the fourth, and so on, *and not possibly otherwise*, to the end. But in proportion to the progress made in a game of chess, is the *uncertainty* of each ensuing move. A few moves having been made, *no step is certain*. Different spectators of the game would advise different moves. All is then dependent upon the variable judgment of the players. Now even granting (what should not be granted) that the

movements of the Automaton Chess-Player were in themselves determinate, they would be necessarily interrupted and disarranged by the indeterminate will of his antagonist. There is then no analogy whatever between the operations of the Chess-Player, and those of the calculating machine of Mr. Babbage, and if we choose to call the former a *pure machine* we must be prepared to admit that it is beyond all comparison, the most wonderful of the inventions of mankind. Its original projector, however, Baron Kempelen, had no scruple in declaring it to be a "very ordinary piece of mechanism—a *bagatelle* whose effects appeared so marvellous only from the boldness of the conception, and the fortunate choice of the methods adopted for promoting the illusion." But it is needless to dwell upon this point. It is quite certain that the operations of the Automaton are regulated by *mind*, and by nothing else. Indeed this matter is susceptible of a mathematical demonstration, *a priori*. The only question then is of the *manner* in which human agency is brought to bear. Before entering upon this subject it would be as well to give a brief history and description of the Chess-Player for the benefit of such of our readers as may never have had an opportunity of witnessing Mr. Maelzel's exhibition.

The Automaton Chess-Player was invented in 1769 by Baron Kempelen, a nobleman of Presburg, in Hungary, who afterward disposed of it, together with the secret of its operations, to its

present possessor.* Soon after its completion it was exhibited in Presburg, Paris, Vienna, and other continental cities. In 1783 and 1784 it was taken to London by Mr. Maelzel. Of late years it has visited the principal towns in the United States. Wherever seen, the most intense curiosity was excited by its appearance, and numerous have been the attempts, by men of all classes, to fathom the mystery of its evo-

lutions. The cut above gives a tolerable representation of the figure as seen by the citizens of Richmond a few weeks ago. The right arm, however, should lie more at length upon the box, a chess-board should appear upon it, and the cushion should not be seen while the pipe is held. Some immaterial alterations have been made in the costume of the player since it came into the possession of Maelzel—the plume, for example, was not originally worn.

* This was written in 1835, when Mr. Maelzel, recently deceased, was exhibiting the Chess-Player in the United States. It is now (1855), we believe, in the possession of Prof. J. K. Mitchell, M.D., of Philadelphia.—Griswold's Note.

At the hour appointed for exhibition, a curtain is withdrawn, or folding-doors are thrown open, and the machine rolled to within about twelve feet of the nearest of the spectators, between whom and it (the machine) a rope is stretched. A figure is seen habited as a Turk, and seated, with its legs crossed, at a large box apparently of maple-wood, which serves it as a table. The exhibitor will, if requested, roll the machine to any portion of the room, suffer it to remain altogether on any designated spot, or even shift its location repeatedly during the progress of a game. The bottom of the box is elevated considerably above the floor by means of the castors or brazen rollers on which it moves, a clear view of the surface immediately beneath the Automaton being thus afforded to the spectators. The chair on which the figure sits is affixed permanently to the box. On the top of this latter is a chess-board, also permanently affixed. The right arm of the Chess-Player is extended at full length before him, at right angles with his body, and lying, in an apparently careless position, by the side of the board. The back of the hand is upward. The board itself is eighteen inches square. The left arm of the figure is bent at the elbow, and in the left hand is a pipe. A green drapery conceals the back of the Turk, and falls partially over the front of both shoulders. To judge from the external appearance of the box, it is divided into five compartments—three cupboards of equal dimensions and two drawers occupying that portion of the chest lying beneath

the cupboards. The foregoing observations apply to the appearance of the Automaton upon its first introduction into the presence of the spectators.

Maelzel now informs the company that he will disclose to their view the mechanism of the machine. Taking from his pocket a bunch of keys he unlocks with one of them, a door marked 1 in the cut, and throws the cupboard fully open to the inspection of all present. Its whole interior is apparently filled with wheels, pinions levers, and other machinery, crowded very closely together, so that the eye can penetrate but a little distance into the mass. Leaving this door open to its full extent, he goes now round to the back of the box, and raising the drapery of the figure, opens another door situated precisely in the rear of the one first opened. Holding a lighted candle at this door, and shifting the position of the whole machine repeatedly at the same time, a bright light is thrown entirely through the cupboard, which is now clearly seen to be full, completely full, of machinery. The spectators being satisfied of this fact, Maelzel closes the back door, locks it, takes the key from the lock, lets fall the drapery of the figure and comes round to the front. The door marked 1, it will be remembered is still open. The exhibitor now proceeds to open the drawer which lies beneath the cupboards at the bottom of the box—for although there are apparently two drawers, there is really only one—the two handles and two key-holes being intended merely for ornament. Having

opened this drawer to its full extent, a small cushion, and a set of chessmen, fixed in a framework made to support them perpendicularly, are discovered. Leaving this drawer, as well as cupboard No. 1, open, Maelzel now unlocks door No. 2, and door No. 3, which are discovered to be folding doors, opening into one and the same compartment. To the right of this compartment, however, (that is to say to the spectators' right), a small division, six inches wide, and filled with machinery, is partitioned off. The main compartment itself (in speaking of that portion of the box visible upon opening doors 2 and 3, we shall always call it the main compartment) is lined with dark cloth and contains no machinery whatever beyond two pieces of steel, quadrant-shaped, and situated one in each of the rear top corners of the compartment. A small protuberance about eight inches square, and also covered with dark cloth, lies on the floor of the compartment near the rear corner on the spectators' left hand. Leaving doors No. 2 and No. 3 open, as well as the drawer and door No. 1, the exhibitor now goes round to the back of the main compartment, and, unlocking another door there, displays clearly all the interior of the main compartment, by introducing a candle behind it and within it. The whole box being thus apparently disclosed to the scrutiny of the company, Maelzel, still leaving the doors and drawer open, rolls the Automaton entirely round, and exposes the back of the Turk by lifting up the drapery. A door about ten inches square is thrown open in the

loins of the figure, and a smaller one also in the left thigh. The interior of the figure, as seen through these apertures, appears to be crowded with machinery. In general, every spectator is now thoroughly satisfied of having beheld and completely scrutinized, at one and the same time, every individual portion of the Automaton, and the idea of any person being concealed in the interior, during so complete an exhibition of that interior, if ever entertained, is immediately dismissed as preposterous in the extreme.

M. Maelzel, having rolled the machine back into its original position, now informs the company that the Automaton will play a game of chess with any one disposed to encounter him. This challenge being accepted, a small table is prepared for the antagonist, and placed close by the rope, but on the spectators' side of it, and so situated as not to prevent the company from obtaining a full view of the Automaton. From a drawer in this table is taken a set of chess-men, and Maelzel arranges them generally, but not always, with his own hands, on the chess-board, which consists merely of the usual number of squares painted upon the table. The antagonist having taken his seat, the exhibitor approaches the drawer of the box, and takes therefrom the cushion, which, after removing the pipe from the hand of the Automaton, he places under its left arm as a support. Then taking also from the drawer the Automaton's set of chess-men, he arranges them upon the chess-board before the figure. He now proceeds to close the doors and

to lock them—leaving the bunch of keys in door No. 1. He also closes the drawer, and, finally, winds up the machine, by applying a key to an aperture in the left end (the spectators' left) of the box. The game now commences—the Automaton taking the first move. The duration of the contest is usually limited to half an hour, but if it be not finished at the expiration of this period, and the antagonist still contends that he can beat the Automaton, M. Maelzel has seldom any objection to continue it. Not to weary the company is the ostensible and no doubt the real object of the limitation. It will of course be understood that when a move is made at his own table, by the antagonist, the corresponding move is made at the box of the Automaton, by Maelzel himself, who then acts as the representative of the antagonist. On the other hand, when the Turk moves, the corresponding move is made at the table of the antagonist, also by M. Maelzel, who then acts as the representative of the Automaton. In this manner it is necessary that the exhibitor should often pass from one table to the other. He also frequently goes in the rear of the figure to remove the chess-men which it has taken, and which it deposits, when taken, on the box to the left (to its own left) of the board. When the Automaton hesitates in relation to its move, the exhibitor is occasionally seen to place himself very near its right side, and to lay his hand now and then, in a careless manner, upon the box. He has also a peculiar shuffle with his feet, calculated to induce suspicion of collusion

with the machine in minds which are more cunning than sagacious. These peculiarities are, no doubt, mere mannerisms of M. Maelzel, or, if he is aware of them at all, he puts them in practice with a view of exciting in the spectators a false idea of the pure mechanism in the Automaton.

The Turk plays with his left hand. All the movements of the arm are at right angles. In this manner, the hand (which is gloved and bent in a natural way), being brought directly above the piece to be moved, descends finally upon it, the fingers receiving it, in most cases, without difficulty. Occasionally, however, when the piece is not precisely in its proper situation the Automaton fails in his attempt at seizing it. When this occurs, no second effort is made, but the arm continues its movement in the direction originally intended, precisely as if the piece were in the fingers. Having thus designated the spot whither the move should have been made, the arm returns to its cushion, and Maelzel performs the evolution which the Automaton pointed out. At every movement of the figure machinery is heard in motion. During the progress of the game, the figure now and then rolls its eyes, as if surveying the board, moves its head, and pronounces the word *echec* (check) when necessary.* If a false move be made by his antagonist, he raps briskly on the box with the fingers of his right hand, shakes his head roughly, and

* The making the Turk pronounce the word *echec*, is an improvement by M. Maelzel. When in possession of Baron Kem-pelen, the figure indicated a *check* by rapping on the box with his right hand.

replacing the piece falsely moved, in its former situation, assumes the next move himself. Upon beating the game, he waves his head with an air of triumph, looks around complacently upon the spectators, and drawing his left arm farther back than usual, suffers his fingers alone to rest upon the cushion. In general, the Turk is victorious—once or twice he has been beaten. The game being ended, Maelzel will again, if desired, exhibit the mechanism of the box, in the same manner as before. The machine is then rolled back, and a curtain hides it from the view of the company.

There have been many attempts at solving the mystery of the Automaton. The most general opinion in relation to it, an opinion too not unfrequently adopted by men who should have known better, was, as we have before said, that no immediate human agency was employed—in other words, that the machine was purely a machine and nothing else. Many, however, maintained that the exhibitor himself regulated the movements of the figure by mechanical means operating through the feet of the box. Others, again, spoke confidently of a magnet. Of the first of these opinions we shall say nothing at present more than we have already said. In relation to the second it is only necessary to repeat what we have before stated, that the machine is rolled about on castors, and will, at the request of the spectator, be moved to and fro to any portion of the room, even during the progress of the game. The supposition of the magnet

is also untenable—for if a magnet were the agent, any other magnet in the pocket of a spectator would disarrange the entire mechanism. The exhibitor, however, will suffer the most powerful loadstone to remain even upon the box during the whole of the exhibition.

The first attempt at a written explanation of the secret, at least the first attempt of which we ourselves have any knowledge, was made in a large pamphlet printed at Paris in 1785. The author's hypothesis amounted to this—that a dwarf actuated the machine. This dwarf he supposed to conceal himself during the opening of the box by thrusting his legs into two hollow cylinders, which were represented to be (but which are not) among the machinery in the cupboard No. 1, while his body was out of the box entirely, and covered by the drapery of the Turk. When the doors were shut the dwarf was enabled to bring his body within the box—the noise produced by some portion of the machinery allowing him to do so unheard, and also to close the door by which he entered. The interior of the Automaton being then exhibited, and no person discovered, the spectators, says the author of this pamphlet, are satisfied that no one is within any portion of the machine. The whole hypothesis was too obviously absurd to require comment or refutation, and accordingly we find that it attracted very little attention.

In 1789 a book was published at Dresden by M. I. F. Freyhere in which another endeavor was made to unravel the mystery. Mr. Frey-

here's book was a pretty large one, and copiously illustrated by colored engravings. His supposition was that "a well-taught boy, very thin and tall of his age (sufficiently so that he could be concealed in a drawer almost immediately under the chess-board") played the game of chess and effected all the evolutions of the Automaton. This idea, although even more silly than that of the Parisian author, met with a better reception, and was in some measure believed to be the true solution of the wonder, until the inventor put an end to the discussion by suffering a close examination of the top of the box.

These bizarre attempts at explanation were followed by others equally bizarre. Of late years, however, an anonymous writer, by a course of reasoning exceedingly unphilosophical, has contrived to blunder upon a plausible solution—although we cannot consider it altogether the true one. His Essay was first published in a Baltimore weekly paper, was illustrated by cuts, and was entitled "An Attempt to Analyze the Autcmaton Chess-Player of M. Maelzel." This Essay we suppose to have been the original of the *pamphlet* to which Sir David Brewster alludes in his "Letters on Natural Magic," and which he has no hesitation in declaring a thorough and satisfactory explanation. The *results* of the analysis are undoubtedly, in the main, just; but we can only account for Brewster's pronouncing the Essay a thorough and satisfactory explanation, by supposing him to have bestowed upon it a very cursory and inat-

tentive perusal. In the compendium of the Essay, made use of in the "Letters on Natural Magic," it is quite impossible to arrive at any distinct conclusion in regard to the adequacy or inadequacy of the analysis, on account of the gross misarrangement and deficiency of the letters of reference employed. The same fault is to be found in the "Attempt," etc., as we originally saw it. The solution consists in a series of minute explanations, (accompanied by woodcuts, the whole occupying many pages,) in which the object is to show the *possibility* of *so shifting the partitions* of the box, as to allow a human being, concealed in the interior, to move portions of his body from one part of the box to another, during the exhibition of the mechanism—thus eluding the scrutiny of the spectators. There can be no doubt, as we have before observed, and as we will presently endeavor to show, that the principle, or rather the result of this solution is the true one. Some person is concealed in the box during the whole time of exhibiting the interior. We object, however, to the whole verbose description of the *manner* in which the partitions are shifted, to accommodate the movements of the person concealed. We object to it as a mere theory assumed in the first place, and to which circumstances are afterward made to adapt themselves. It was not, and could not have been, arrived at by any inductive reasoning. In whatever way the shifting is managed, it is of course concealed at every step from observation. To show that certain movements might possibly be

effected in a certain way, is very far from showing that they are actually so effected. There may be an infinity of other methods by which the same results may be obtained. The probability of the one assumed proving the correct one is then as unity to infinity. But, in reality, this particular point, the shifting of the partitions, is of no consequence whatever. It was altogether unnecessary to devote seven or eight pages for the purpose of proving what no one in his senses would deny—viz.: that the wonderful mechanical genius of Baron Kempelen could invent the necessary means for shutting a door or slipping aside a panel, with a human agent too at his service in actual contact with the panel or the door, and the whole operations carried on, as the author of the Essay himself shows, and as we shall attempt to show more fully hereafter, entirely out of reach of the observation of the spectators.

In attempting ourselves an explanation of the Automaton, we will, in the first place, endeavor to show how its operations are effected, and afterward describe, as briefly as possible, the nature of the *observations* from which we have deduced our result.

It will be necessary for a proper understanding of the subject that we repeat here in a few words, the routine adopted by the exhibitor in disclosing the interior of the box—a routine from which he *never* deviates in any material particular. In the first place he opens the door No. 1. Leaving this open, he goes round to the

rear of the box, and opens a door precisely at the back of door No. 1. To this back door he holds a lighted candle. He then *closes the back door*, locks it, and, coming round to the front, opens the drawer to its full extent. This done, he opens the doors No. 2 and No. 3 (the folding doors), and displays the interior of the main compartment. Leaving open the main compartment, the drawer, and the front door of cupboard No. 1, he now goes to the rear again, and throws open the back door of the main compartment. In shutting up the box no particular order is observed, except that the folding-doors are always closed before the drawer.

Now, let us suppose that when the machine is first rolled into the presence of the spectators, a man is already within it. His body is situated behind the dense machinery in cupboard No. 1 (the rear portion of which machinery is so contrived as to slip *en masse*, from the main compartment to the cupboard No. 1, as occasion may require), and his legs lie at full length in the main compartment. When Maelzel opens the door No. 1, the man within is not in any danger of discovery, for the keenest eye cannot penetrate more than about two inches into the darkness within. But the case is otherwise when the back door of the cupboard No. 1 is opened. A bright light then pervades the cupboard, and the body of the man would be discovered if it were there. But it is not. The putting the key in the lock of the back door was a signal on hearing which the person concealed brought his body

forward to an angle as acute as possible—throwing it altogether, or nearly so, into the main compartment. This, however, is a painful position, and cannot be long maintained. Accordingly we find that Maelzel *closes the back door*. This being done, there is no reason why the body of the man may not resume its former situation—for the cupboard is again so dark as to defy scrutiny. The drawer is now opened, and the legs of the person within drop down behind it in the space it formerly occupied.* There is, consequently, now no longer any part of the man in the main compartment—his body being behind the machinery in cupboard No. 1, and his legs in the space occupied by the drawer. The exhibitor, therefore, finds himself at liberty to display the main compartment. This he does—opening both its back and front doors—and no person is discovered. The spectators are now satisfied that the whole of the box is exposed to view—and exposed too, all portions of it at one and the same time. But of course this is not the case. They neither see the space behind the drawer, nor the interior of cupboard No. 1—the front door of which latter the exhibitor virtually shuts in shutting its back door. Maelzel, having now rolled the machine around, lifted up

* Sir David Brewster supposes that there is always a large space behind this drawer even when shut—in other words, that the drawer is a “false drawer,” and does not extend to the back of the box. But the idea is altogether untenable. So commonplace a trick would be immediately discovered—especially as the drawer is always opened to its full extent, and an opportunity thus offered of comparing its depth with that of the box

the drapery of the Turk, opened the doors in its back and thigh, and shown his trunk to be full of machinery, brings the whole back into its original position, and closes the doors. The man within is now at liberty to move about. He gets up into the body of the Turk just so high as to bring his eyes above the level of the chess-board. It is very probable that he seats himself upon the little square block or protuberance which is seen in a corner of the main compartment when the doors are open. In this position he sees the chess-board through the bosom of the Turk, which is of gauze. Bringing his right arm across his breast he actuates the little machinery necessary to guide the left arm and the fingers of the figure. This machinery is situated just beneath the left shoulder of the Turk, and is consequently easily reached by the right hand of the man concealed, if we suppose his right arm brought across the breast. The motion of the head and eyes, and of the right arm of the figure, as well as the sound *echec* are produced by other mechanism in the interior, and actuated at will by the man within. The whole of this mechanism—that is to say, all the mechanism essential to the machine—is most probably contained within the little cupboard (of about six inches in breadth) partitioned off at the right (the spectators' right) of the main compartment.

In this analysis of the operations of the Automaton, we have purposely avoided any allusion to the manner in which the partitions are shifted, and it will now be readily comprehended

that this point is a matter of no importance, since, by mechanism within the ability of any common carpenter, it might be effected in an infinity of different ways, and since we have shown that, however performed, it is performed out of the view of the spectators. Our result is founded upon the following *observations* taken during frequent visits to the exhibition of Maelzel.*

1. The moves of the Turk are not made at regular intervals of time, but accommodate themselves to the moves of the antagonist—although this point (of regularity), so important in all kinds of mechanical contrivance, might have been readily brought about by limiting the time allowed for the moves of the antagonist. For example, if this limit were three minutes, the moves of the Automaton might be made at any given intervals longer than three minutes. The fact then of irregularity, when regularity might have been so easily attained, goes to prove that regularity is unimportant to the action of the Automaton—in other words, that the Automaton is not a *pure machine*.

2. When the Automaton is about to move a piece, a distinct motion is observable just beneath the left shoulder, and which motion agitates in a slight degree the drapery covering the

* Some of these *observations* are intended merely to prove that the machine must be regulated by *mind*, and it may be thought a work of supererogation to advance further arguments in support of what has been already fully decided. But our object is to convince, in especial, certain of our friends upon whom a train of suggestive reasoning will have more influence than the most positive *a priori* demonstration.

front of the left shoulder. This motion invariably precedes, by about two seconds, the movement of the arm itself; and the arm never, in any instance, moves without this preparatory motion in the shoulder. Now let the antagonist move a piece, and let the corresponding move be made by Maelzel, as usual, upon the board of the Automaton. Then let the antagonist narrowly watch the Automaton, until he detect the preparatory motion in the shoulder. Immediately upon detecting this motion, and before the arm itself begins to move, let him withdraw his piece, as if perceiving an error in his manœuvre. It will then be seen that the movement of the arm, which, in all other cases, immediately succeeds the motion in the shoulder, is withheld,—is not made,—although Maelzel has not yet performed, on the board of the Automaton, any move corresponding to the withdrawal of the antagonist. In this case, that the Automaton was about to move is evident; and that he did not move, was an effect plainly produced by the withdrawal of the antagonist, and without any intervention of Maelzel.

This fact fully proves (1) that the intervention of Maelzel, in performing the moves of the antagonist on the board of the Automaton, is not essential to the movements of the Automaton; (2) that its movements are regulated by *mind*—by some person who sees the board of the antagonist; (3) that its movements are not regulated by the mind of Maelzel, whose back was

turned toward the antagonist at the withdrawal of his move.

3. The Automaton does not invariably win the game. Were the machine a pure machine, this would not be the case—it would always win. The *principle* being discovered by which a machine can be made to *play* a game of chess, an extension of the same principle would enable it to *win* a game; a further extension would enable it to *win all* games—that is, to beat any possible game of an antagonist. A little consideration will convince any one that the difficulty of making a machine beat all games is not in the least degree greater, as regards the principle of the operations necessary, than that of making it beat a single game. If, then, we regard the Chess-Player as a machine, we must suppose (what is highly improbable) that its inventor preferred leaving it incomplete to perfecting in motion the mechanism of the Automaton when we reflect that the leaving it incomplete would afford an argument against the possibility of its being a pure machine—the very argument we now adduce.

4. When the situation of the game is difficult or complex, we never perceive the Turk either shake his head or roll his eyes. It is only when his next move is obvious, or when the game is so circumstanced that to a man in the Automaton's place there would be no necessity for reflection. Now, these peculiar movements of the head and eyes are movements customary with persons engaged in meditation, and the in-

genious Baron Kempelen would have adapted these movements (were the machine a pure machine) to occasions proper for their display—that is, to occasions of complexity. But the reverse is seen to be the case, and this reverse applies precisely to our supposition of a man in the interior. When engaged in meditation about the game he has no time to think of setting in motion the mechanism of the Automaton by which are moved the head and the eyes. When the game, however, is obvious, he has time to look about him, and, accordingly, we see the head shake and the eyes roll.

5. When the machine is rolled round to allow the spectators an examination of the back of the Turk, and when his drapery is lifted up and the doors in the trunk and thigh thrown open, the interior of the trunk is seen to be crowded with machinery. In scrutinizing this machinery while the Automaton was in motion—that is to say, while the whole machine was moving on the castors,—it appeared to us that certain portions of the mechanism changed their shape and position in a degree too great to be accounted for by the simple laws of perspective; and subsequent examinations convinced us that these undue alterations were attributable to mirrors in the interior of the trunk. The introduction of mirrors among the machinery could not have been intended to influence, in any degree, the machinery itself. Their operation—whatever that operation should prove to be—must necessarily have reference to the eye of the spectator. We

at once concluded that these mirrors were so placed to multiply to the vision some few pieces of machinery within the trunk so as to give it the appearance of being crowded with mechanism. Now the direct inference from this is that the machine is not a pure machine. For if it were, the inventor, so far from wishing its mechanism to appear complex, and using deception for the purpose of giving it this appearance, would have been especially desirous of convincing those who witnessed his exhibition of the *simplicity* of the means by which results so wonderful were brought about.

6. The external appearance, and, especially, the deportment of the Turk, are, when we consider them as imitations of *life*, but very indifferent imitations. The countenance evinces no ingenuity, and is surpassed, in its resemblance to the human face, by the very commonest of wax-works. The eyes roll unnaturally in the head, without any corresponding motions of the lids or brows. The arm, particularly, performs its operations in an exceedingly stiff, awkward, jerking, and rectangular manner. Now, all this is the result either of inability in Maelzel to do better, or of intentional neglect—accidental neglect being out of the question, when we consider that the whole time of the ingenious proprietor is occupied in the improvement of his machines. Most assuredly we must not refer the unlife-like appearances to inability—for all the rest of Maelzel's automata are evidence of his full ability to copy the notions and peculiari-

ties of life with the most wonderful exactitude. The rope-dancers, for example, are inimitable. When the clown laughs, his lips, his eyes, his eyebrows, and eyelids—indeed, all the features of his countenance—are imbued with their appropriate expressions. In both him and his companion, every gesture is so entirely easy, and free from the semblance of artificiality, that, were it not for the diminutiveness of their size, and the fact of their being passed from one spectator to another previous to their exhibition on the rope, it would be difficult to convince any assemblage of persons that these wooden automata were not living creatures. We cannot, therefore, doubt Mr. Maelzel's ability, and we must necessarily suppose that he intentionally suffered his Chess-Player to remain the same artificial and unnatural figure which Baron Kempelen (no doubt also through design) originally made it. What this design was it is not difficult to conceive. Were the Automaton life-like in its motions, the spectator would be more apt to attribute its operations to their true cause (that is, to human agency within), than he is now, when the awkward and rectangular manœuvres convey the idea of pure and unaided mechanism.

7. When, a short time previous to the commencement of the game, the Automaton is wound up by the exhibitor as usual, an ear in any degree accustomed to the sounds produced in winding up a system of machinery, will not fail to dis-

cover, instantaneously, that the axis turned by the key in the box of the Chess-Player, cannot possibly be connected with either a weight, a spring, or any system of machinery whatever. The inference here is the same as in our last observation. The winding up is inessential to the operations of the Automaton, and is performed with the design of exciting in the spectators the false idea of mechanism.

8. When the question is demanded explicitly of Maelzel: "Is the Automaton a pure machine or not?" his reply is invariably the same: "I will say nothing about it." Now the notoriety of the Automaton, and the great curiosity it has everywhere excited, are owing more especially to the prevalent opinion that it is a pure machine, than to any other circumstance. Of course, then, it is the interest of the proprietor to represent it as a pure machine. And what more obvious, and more effectual method could there be of impressing the spectators with this desired idea, than a positive and explicit declaration to that effect? On the other hand, what more obvious and effectual method could there be of exciting a disbelief in the Automaton's being a pure machine, than by withholding such explicit declaration? For, people will naturally reason thus: It is Maelzel's interest to represent this thing a pure machine; he refuses to do so, directly, in words, although he does not scruple and is evidently anxious to do so indirectly, by actions; were it actually what

he wishes to represent it by actions, he would gladly avail himself of the more direct testimony of words; the inference is, that the consciousness of its *not* being a pure machine, is the reason of his silence; his actions cannot implicate him in a falsehood, his words may.

9. When, in exhibiting the interior of the box, Maelzel has thrown open the door No. 1, and also the door immediately behind it, he holds a lighted candle at the back door (as before mentioned); and moves the entire machine to and fro with a view of convincing the company that the cupboard No. 1 is entirely filled with machinery. When the machine is thus moved about, it will be apparent to any careful observer, that, whereas that portion of the machinery near the front door No. 1, is perfectly steady and unwavering, the portion farther within fluctuates, in a very slight degree, with the movements of the machine. This circumstance first aroused in us the suspicion that the more remote portion of the machinery was so arranged as to be easily slipped, *en masse*, from its position when occasion should require it. This occasion we have already stated to occur when the man concealed within brings his body into an erect position upon the closing of the back door.

10. Sir David Brewster states the figure of the Turk to be of the size of life—but in fact it is far above the ordinary size. Nothing is more easy than to err in our notions of magnitude. The body of the Automaton is generally insulated, and, having no means of immediately comparing

it with any human form, we suffer ourselves to consider is as of ordinary dimensions. This mistake may, however, be corrected by observing the Chess-Player when, as is sometimes the case, the exhibitor approaches it. Mr. Maelzel, to be sure, is not very tall, but upon drawing near the machine his head will be found at least eighteen inches below the head of the Turk, although the latter, it will be remembered, is in a sitting position.

11. The box, behind which the Automaton is placed, is precisely three feet six inches long, two feet four inches deep, and two feet six inches high. These dimensions are fully sufficient for the accommodation of a man very much above the common size—and the main compartment alone is capable of holding any ordinary man in the position we have mentioned as assumed by the person concealed. As these are facts, which any one who doubts them may prove by actual calculation, we deem it unnecessary to dwell upon them. We will only suggest that, although the top of the box is apparently a board of about three inches in thickness, the spectator may satisfy himself, by stooping and looking up at it when the main compartment is open, that it is in reality very thin. The height of the drawer also will be misconceived by those who examine it in a cursory manner. There is a space of about three inches between the top of the drawer as seen from the exterior, and the bottom of the cupboard—a space which must be included in the height of the drawer. These contrivances to

make the room within the box appear less than it actually is, are referable to a design on the part of the inventor, to impress the company again with a false idea, viz., that no human being can be accommodated within the box.

12. The interior of the main compartment is lined throughout with *cloth*. This cloth we suppose to have a twofold object. A portion of it may form, when tightly stretched, the only partitions which there is any necessity for removing during the changes of the man's position, viz.: the partition between the rear of the main compartment and the rear of cupboard No. 1, and the partition between the main compartment and the space behind the drawer when open. If we imagine this to be the case, the difficulty of shifting the partitions vanishes at once, if indeed any such difficulty could be supposed under any circumstances to exist. The second object of the cloth is to deaden and render indistinct all sounds occasioned by the movements of the person within.

13. The antagonist (as we have before observed) is not suffered to play at the board of the Automaton, but is seated at some distance from the machine. The reason which, most probably, would be assigned for this circumstance, if the question were demanded, is, that were the antagonist otherwise situated, his person would intervene between the machine and the spectators, and preclude the latter from a distinct view. But this difficulty might be easily obviated, either by elevating the seats of the company, or

by turning the end of the box toward them during the game. The true cause of the restriction is, perhaps, very different. Were the antagonist seated in contact with the box, the secret would be liable to discovery, by his detecting, with the aid of a quick ear, the breathings of the man concealed.

14. Although M. Maelzel, in disclosing the interior of the machine, sometimes, slightly deviates from the *routine* which we have pointed out, yet *never* in any instance does he *so* deviate from it as to interfere with our solution. For example, he has been known to open, first of all, the drawer—but he never opens the main compartment without first closing the back door of cupboard No. 1—he never opens the main compartment without first pulling out the drawer—he never shuts the drawer without first shutting the main compartment—he never opens the back door of cupboard No. 1 while the main compartment is open—and the game of chess is never commenced until the whole machine is closed. Now, if it were observed that *never, in any single instance*, did M. Maelzel differ from the routine we have pointed out as necessary to our solution, it would be one of the strongest possible arguments in corroboration of it; but the argument becomes infinitely strengthened if we duly consider the circumstance that he *does occasionally* deviate from the routine, but never does *so* deviate as to falsify the solution.

15. There are six candles on the board of the Automaton during exhibition. The question

naturally arises: "Why are so many employed, when a single candle, or, at farthest, two, would have been amply sufficient to afford the spectators a clear view of the board, in a room otherwise so well lit up as the exhibition room always is—when, moreover, if we suppose the machine a *pure machine*, there can be no necessity for so much light, or indeed any light at all, to enable it to perform its operations—and when, especially, only a single candle is placed upon the table of the antagonist?" The first and most obvious inference is, that so strong a light is requisite to enable the man within to see through the transparent material (probably fine gauze) of which the breast of the Turk is composed. But when we consider the *arrangement* of the candles, another reason immediately presents itself. There are six lights (as we have said before) in all. Three of these are on each side of the figure. Those most remote from the spectators are the longest—those in the middle are about two inches shorter—and those nearest the company about two inches shorter still—and the candles on one side differ in height from the candles respectively opposite on the other, by a ratio different from two inches—that is to say, the longest candle on one side is about three inches shorter than the longest candle on the other, and so on. Thus it will be seen that no two of the candles are of the same height, and thus also the difficulty of ascertaining the *material* of the breast of the figure (against which the light is especially directed) is greatly augmented by the dazzling effect of the

complicated crossings of the rays—crossings which are brought about by placing the centres of radiation all upon different levels.

16. While the Chess-Player was in possession of Baron Kempelen, it was more than once observed, first, that an Italian in the suite of the Baron was never visible during the playing of a game of chess by the Turk; and, secondly, that the Italian being taken seriously ill, the exhibition was suspended until his recovery. This Italian professed a *total* ignorance of the game of chess, although all others of the suite played well. Similar observations have been made since the Automaton has been purchased by Maelzel. There is a man, *Schlumberger*, who attends him wherever he goes, but who has no ostensible occupation other than that of assisting in the packing and unpacking of the Automaton. This man is about the medium size, and has a remarkable stoop in the shoulders. Whether he professes to play chess or not, we are not informed. It is quite certain, however, that he is never to be seen during the exhibition of the Chess-Player, although frequently visible just before and just after the exhibition. Moreover, some years ago Maelzel visited Richmond with his automata, and exhibited them, we believe, in the house now occupied by M. Bossieux as a dancing academy. *Schlumberger* was suddenly taken ill, and during his illness there was no exhibition of the Chess-Player. These facts are well known to many of our citizens. The reason assigned for the suspension of the Chess-Player's perform-

ances was *not* the illness of *Schlumberger*. The inferences from all this we leave, without farther comment, to the reader.

17. The Turk plays with his *left* arm. A circumstance so remarkable cannot be accidental. Brewster takes no notice of it whatever, beyond a mere statement, we believe, that such is the fact. The early writers of treatises on the Automaton seem not to have observed the matter at all, and have no reference to it. The author of the pamphlet alluded to by Brewster mentions it, but acknowledges his inability to account for it. Yet it is obviously from such prominent discrepancies or incongruities as this that deductions are to be made (if made at all) which shall lead us to the truth.

The circumstance of the Automaton's playing with his left hand cannot have connection with the operations of the machine, considered merely as such. Any mechanical arrangement which would cause the figure to move, in any given manner, the left arm, could, if reversed, cause it to move, in the same manner, the right. But these principles cannot be extended to the human organization, wherein there is a marked and radical difference in the construction, and, at all events, in the powers, of the right and left arms. Reflecting upon this latter fact, we naturally refer the incongruity noticeable in the Chess-Player to this peculiarity in the human organization. If so, we must imagine some *reversion*—for the Chess-Player plays precisely as a man *would not*. These ideas, once entertained, are

sufficient of themselves, to suggest the notion of a man in the interior. A few more imperceptible steps lead us, finally, to the result. The Automaton plays with his left arm, because under no other circumstances could the man within play with his right—a *desideratum* of course. Let us, for example, imagine the Automaton to play with his right arm. To reach the machinery which moves the arm, and which we have before explained to lie just beneath the shoulder, it would be necessary for the man within either to use his right arm in an exceedingly painful and awkward position (viz., brought up close to his body and tightly compressed between his body and the side of the Automaton), or else to use his left arm brought across his breast. In neither case could he act with the requisite ease of precision. On the contrary, the Automaton playing, as it actually does, with the left arm, all difficulties vanish. The right arm of the man within is brought across his breast, and his right fingers act, without any constraint, upon the machinery in the shoulder of the figure.

We do not believe that any reasonable objections can be urged against this solution of the Automaton Chess-Player.

HOW TO WRITE A BLACKWOOD ARTICLE

[Published in *The American Museum*, December, 1838.]

"In the name of the Prophet—figs!!!"

—*Cry of Turkish fig-peller.*

I PRESUME everybody has heard of me. My name is the Signora Psyche Zenobia. This I know to be a fact. Nobody but my enemies ever calls me Suky Snobbs. I have been assured that Suky is but a vulgar corruption of Psyche, which is good Greek, and means "the soul" (that's me, I'm *all* soul) and sometimes "a butterfly," which latter meaning undoubtedly alludes to my appearance in my new crimson satin dress, with the sky-blue Arabian *mantelet*, and the trimmings of green *agraffas*, and the seven flounces of orange-colored *auriculas*. As for Snobbs—any person who should look at me would be instantly aware that my name wasn't Snobbs. Miss Tabitha Turnip propagated that report through sheer envy. Tabitha Turnip indeed! Oh the little wretch! But what can we expect from a turnip? Wonder if she remembers the old adage

about "blood out of a turnip," etc.; [Mem: put her in mind of it the first opportunity]. [Mem again—pull her nose.] Where was I? Ah! I have been assured that Snobbs is a mere corruption of Zenobia, and that Zenobia was a queen—(So am I. Dr. Moneyppenny always calls me the Queen of Hearts)—and that Zenobia, as well as Psyche, is good Greek, and that my father was "a Greek," and that consequently I have a right to our patronymic, which is Zenobia, and not by any means Snobbs. Nobody but Tabitha Turnip calls me Suky Snobbs. I am the Signora Psyche Zenobia.

As I said before, everybody has heard of me. I am that very Signora Psyche Zenobia, so justly celebrated as corresponding secretary to the "*Philadelphia. Regular, Exchange, Tea, Total, Young, Belles, Lettres, Universal, Experimental, Bibliographical. Association, To, Civilize, Humanity.*" Dr. Moneyppenny made the title for us, and says he chose it because it sounded big like an empty rum-puncheon. (A vulgar man that sometimes—but he's deep.) We all sign the initials of the society after our names, in the fashion of the R. S. A., Royal Society of Arts—the S. D. U. K., Society for the Diffusion of Useful Knowledge, etc., etc. Dr. Moneyppenny says the S. stands for *stale*, and the D. U. K. spells duck, (but it don't,) that that S. D. U. K. stands for Stale Duck, and not for Lord Brougham's society—but then Dr. Moneyppenny is such a queer man that I am never sure when he is telling me the truth. At any rate we always add to our

names the initials P. R. E. T. T. Y. B. L. U. E. B. A. T. C. H.—that is to say, Philadelphia, Regular, Exchange, Tea, Total, Young, Belles, Lettres, Universal, Experimental, Bibliographical, Association, To, Civilize, Humanity—one letter for each word, which is a decided improvement upon Lord Brougham. Dr. Moneypenny will have it that our initials give our true character—but for my life I can't see what he means.

Notwithstanding the good offices of the Doctor, and the strenuous exertions of the association to get itself into notice, it met with no very great success until I joined it. The truth is, the members indulged in too flippant a tone of discussion. The papers read every Saturday evening were characterized less by depth than buffoonery. They were all whipped syllabub. There was no investigation of first causes, first principles. There was no investigation of any thing at all. There was no attention paid to that great point, the “fitness of things.” In short there was no fine writing like this. It was all low—very! No profundity, no reading, no metaphysics—nothing which the learned call spirituality, and which the unlearned choose to stigmatize as cant. [Dr. M. says I ought to spell “cant” with a capital K—but I know better.]

When I joined the society it was my endeavor to introduce a better style of thinking and writing, and all the world knows how well I have succeeded. We get up as good papers now in the P. R. E. T. T. Y. B. L. U. E. B. A. T. C. H. as any to be found even in Blackwood. I say Black-

wood, because I have been assured that the finest writing, upon every subject, is to be discovered in the pages of that justly celebrated Magazine. We now take it for our model upon all themes, and are getting into rapid notice accordingly. And, after all, it's not so very difficult a matter to compose an article of the genuine Blackwood stamp, if one only goes properly about it. Of course I don't speak of the political articles. Everybody knows how *they* are managed, since Dr. Money Penny explained it. Mr. Blackwood has a pair of tailor's-shears, and three apprentices who stand by him for orders. One hands him the *Times*, another the *Examiner* and a third a "Gulley's New Compendium of Slang-Whang." Mr. B. merely cuts out and intersperses. It is soon done—nothing but *Examiner*, "Slang-Whang," and *Times*—then *Times*, "Slang-Whang," and *Examiner*—and then *Times*, *Examiner*. and "Slang-Whang."

But the chief merit of the Magazine lies in its miscellaneous articles; and the best of these come under the head of what Dr. Money Penny calls the *bizarreries* (whatever that may mean) and what everybody else calls the *intensities*. This is a species of writing which I have long known how to appreciate, although it is only since my late visit to Mr. Blackwood (deputed by the society) that I have been made aware of the exact method of composition. This method is very simple, but not so much so as the politics. Upon my calling at Mr. B.'s, and making known to him the wishes of the society,

he received me with great civility, took me into his study, and gave me a clear explanation of the whole process.

"My dear madam," said he, evidently struck with my majestic appearance, for I had on the crimson satin, with the green *aggraffas*, and orange-colored *auriculas*. "My dear madam," said he, "sit down. The matter stands thus: In the first place your writer of intensities must have very black ink, and a very big pen, with a very blunt nib. And, mark me, Miss Psyche Zenobia!" he continued, after a pause, with the most expressive energy and solemnity of manner, "mark me!—*that pen—must—never be mended!* Herein, madam, lies the secret, the soul, of intensity. I assume upon myself to say, that no individual, of however great genius, ever wrote with a good pen,—understand me,—a good article. You may take it for granted, that when manuscript can be read it is never worth reading. This is a leading principle in our faith, to which if you cannot readily assent, our conference is at an end."

He paused. But, of course, as I had no wish to put an end to the conference, I assented to a proposition so very obvious, and one, too, of whose truth I had all along been sufficiently aware. He seemed pleased, and went on with his instructions.

"It may appear invidious in me, Miss Psyche Zenobia, to refer you to an article, or set of articles, in the way of model or study; yet perhaps I may as well call your attention to a few

cases. Let me see. There was 'The Dead Alive,' a capital thing!—the record of a gentleman's sensations when entombed before the breath was out of his body—full of tastes, terror, sentiment, metaphysics, and erudition. You would have sworn that the writer had been born and brought up in the coffin. Then we had the 'Confessions of an Opium-eater'—fine, very fine!—glorious imagination—deep philosophy—acute speculation—plenty of fire and fury, and a good spicing of the decidedly unintelligible. That was a nice bit of flummery, and went down the throats of the people delightfully. They would have it that Coleridge wrote the paper—but not so. It was composed by my pet baboon, Juniper, over a rummer of Hollands and water, 'hot, without sugar.'” [This I could scarcely have believed had it been any body but Mr. Blackwood, who assured me of it.] “Then there was 'The Involuntary Experimentalist,' all about a gentleman who got baked in an oven, and came out alive and well, although certainly done to a turn. And then there was 'The Diary of a Late Physician,' where the merit lay in good rant, and indifferent Greek—both of them taking things with the public. And then there was 'The Man in the Bell,' a paper by-the-by, Miss Zenobia, which I cannot sufficiently recommend to your attention. It is the history of a young person who goes to sleep under the clapper of a church bell, and is awakened by its tolling for a funeral. The sound drives him mad, and, accordingly, pulling out his tablets, he gives a record of his

sensations. Sensations are the great things after all. Should you ever be drowned or hung, be sure and make a note of your sensations—they will be worth to you ten guineas a sheet. If you wish to write forcibly, Miss Zenobia, pay minute attention to the sensations.”

“That I certainly will, Mr. Blackwood,” said I.

“Good!” he replied. “I see you are a pupil after my own heart. But I must put you *au fait* to the details necessary in composing what may be denominated a genuine Blackwood article of the sensation stamp—the kind which you will understand me to say I consider the best for all purposes.

“The first thing requisite is to get yourself into such a scrape as no one ever got into before. The oven, for instance,—that was a good hit. But if you have no oven or big bell, at hand, and if you cannot conveniently tumble out of a balloon, or be swallowed up in an earthquake, or get stuck fast in a chimney, you will have to be contented with simply imagining some similar misadventure. I should prefer, however, that you have the actual fact to bear you out. Nothing so well assists the fancy, as an experimental knowledge of the matter in hand. ‘Truth is strange,’ you know, ‘stranger than fiction’—besides being more to the purpose.”

Here I assured him I had an excellent pair of garters, and would go and hang myself forthwith.

“Good!” he replied, “do so;—although hanging is somewhat hackneyed. Perhaps you might do better. Take a dose of Brandreth’s pills, and then give us your sensations. However, my instructions will apply equally well to any variety of misadventure, and in your way home you may easily get knocked in the head, or run over by an omnibus, or bitten by a mad dog, or drowned in a gutter. But to proceed.

“Having determined upon your subject, you must next consider the tone, or manner, of your narration. There is the tone didactic, the tone enthusiastic, the tone natural—all commonplace enough. But then there is the tone laconic, or curt, which has lately come much into use. It consists in short sentences. Somehow thus: Can’t be too brief. Can’t be too snappish. Always a full stop. And never a paragraph.

(“Then there is the tone elevated, diffusive, and interjectional. Some of our best novelists patronize this tone. The words must be all in a whirl, like a humming-top, and make a noise very similar, which answers remarkably well instead of meaning. This is the best of all possible styles where the writer is in too great a hurry to think.

“The tone metaphysical is also a good one. If you know any big words this is your chance for them. Talk of the Ionic and Eleatic schools—of Archytas, Gorgias, and Alcmaeon. Say something about objectivity and subjectivity. Be sure and abuse a man named Locke. Turn up your nose at things in general, and when

you let slip any thing a little *too* absurd, you need not be at the trouble of scratching it out, but just add a foot-note and say that you are indebted for the above profound observation to the '*Kritik der reinen Vernunft*,' or to the '*Metaphysische Anfangsgründe der Naturwissenschaft*.' This would look erudite and—and—and frank. :

"There are various other tones of equal celebrity, but I shall mention only two more—the tone transcendental and the tone heterogeneous. In the former the merit consists in seeing into the nature of affairs a very great deal farther than anybody else. This second sight is very efficient when properly managed. A little reading of the *Dial* will carry you a great way. Eschew, in this case, big words; get them as small as possible, and write them upside down. Look over Channing's poems and quote what he says about a 'fat little man with a delusive show of Can.' Put in something about the Supernal Oneness. Don't say a syllable about the Infernal Twoness. Above all, study innuendo. Hint everything—assert nothing. If you feel inclined to say 'bread and butter,' do not by any means say it outright. You may say any thing and every thing *approaching* to 'bread and butter.' You may hint at buck-wheat cake, or you may even go so far as to insinuate oatmeal porridge, but if bread and butter be your real meaning, be cautious, my *dear* Miss Psyche, not on any account to say 'bread and butter!'"

I assured him that I should never say it again

as long as I lived. He kissed me and continued:

"As for the tone heterogeneous, it is merely a judicious mixture, in equal proportions, of all the other tones in the world, and is consequently made up of every thing deep, great, odd, piquant, pertinent, and pretty.

"Let us suppose now you have determined upon your incidents and tone. The most important portion—in fact, the soul of the whole business, is yet to be attended to,—I allude to *the filling up*. It is not to be supposed that a lady, or gentleman either, has been leading the life of a book-worm. And yet above all things it is necessary that your article have an air of erudition, or at least afford evidence of extensive general reading. Now I'll put you in the way of accomplishing this point. See here!" (pulling down some three or four ordinary-looking volumes, and opening them at random). "By casting your eye down almost any page of any book in the world, you will be able to perceive at once a host of little scraps of either learning or *bel-esprit-ism*, which are the very thing for the spicing of a Blackwood article. You might as well note down a few while I read them to you. I shall make two divisions: first, *Piquant Facts for the Manufacture of Similes*; and, secondly, *Piquant Expressions to be introduced as occasion may require*. Write now!—" and I wrote as he dictated.

"PIQUANT FACTS FOR SIMILES. 'There were originally but three Muses—Melete,

Mneme, *Æde*—meditation, memory, and singing.' You may make a good deal of that little fact if properly worked. You see it is not generally known, and looks *recherché*. You must be careful and give the thing with a downright improvise air.

"Again. 'The river Alpheus passed beneath the sea, and emerged without injury to the purity of its waters.' Rather stale that, to be sure, but, if properly dressed and dished up, will look quite as fresh as ever.

"Here is something better. 'The Persian Iris appears to some persons to possess a sweet and very powerful perfume, while to others it is perfectly scentless.' Fine that, and very delicate! Turn it about a little, and it will do wonders. We'll have some thing else in the botanical line. There's nothing goes down so well, especially with the help of a little Latin. Write!

"*'The Epidendrum Flos Aeris, of Java, bears a very beautiful flower, and will live when pulled up by the roots. The natives suspend it by a cord from the ceiling, and enjoy its fragrance for years.'* That's capital! That will do for the similes. Now for the Piquant Expressions.

"PIQUANT EXPRESSIONS. '*The Venerable Chinese novel Ju-Kiao-Li.*' Good! By introducing these few words with dexterity you will evince your intimate acquaintance with the language and literature of the Chinese. With the aid of this you may possibly get along with-

out either Arabic, or Sanscrit, or Chickasaw. There is no passing muster, however, without Spanish, Italian, German, Latin, and Greek. I must look you out a little specimen of each. Any scrap will answer, because you must depend upon your own ingenuity to make it fit into your article. Now write!

“ ‘*Aussi tendre que Zaïre*’—as tender as Zaire—French. Alludes to the frequent repetition of the phrase, *la tendre Zaïre*, in the French tragedy of that name. Properly introduced, will show not only your knowledge of the language. but your general reading and wit. You can say, for instance, that the chicken you were eating (write an article about being choked to death by a chicken-bone) was not altogether *aussi tendre que Zaïre*. Write!

“ ‘*Ven muerte tan escondida,
Que no te sienta veni,
Porque el plazer del morir,
No me torne á dar la vida.*’

“That’s Spanish—from Miguel de Cervantes. ‘Come quickly, O death! but be sure and don’t let me see you coming, lest the pleasure I shall feel at your appearance should unfortunately bring me back again to life.’ This you may slip in quite *à propos* when you are struggling in the last agonies with the chicken-bone. Write!

“ ‘*Il pover ’ huomo che non sen’ era accorto,
Andava combattendo, e era morto.*’

That ’s Italian, you perceive—from Ariosto. It means that a great hero, in the heat of combat,

not perceiving that he had been fairly killed, continued to fight valiantly, dead as he was. The application of this to your own case is obvious—for I trust, Miss Psyche, that you will not neglect to kick for at least an hour and a half after you have been choked to death by that chicken-bone. Please to write!

“ ‘ Und sterb’ ich doch, no sterb’ ich denn
Durch sie—durch sie!’ ”

That’s German—from Schiller. ‘And if I die, at least I die—for thee—for thee!’ Here it is clear that you are apostrophizing the *cause* of your disaster, the chicken. Indeed what gentleman (or lady either) of sense, *would n’t* die, I should like to know, for a well fattened capon of the right Molucca breed, stuffed with capers and mushrooms, and served up in a salad-bowl, with orange-jellies *en mosaïques*. Write! (You can get them that way at Tortoni’s,)—Write, if you please!

“Here is a nice little Latin phrase, and rare too, (one can’t be too *recherché* or brief in one’s Latin, it’s getting so common,—*ignoratio elenchi*. He has committed an *ignoratio elenchi*—that is to say, he has understood the words of your proposition, but not the idea. The man was a *fool*, you see. Some poor fellow whom you address while choking with that chicken-bone, and who therefore didn’t precisely understand what you were talking about. Throw the *ignoratio elenchi* in his teeth, and, at once, you have him annihilated. If he dares to reply, you can tell

him from Lucan (here it is) that speeches are mere *anemonae verborum*, anemone words. The anemone, with great brilliancy, has no smell. Or, if he begins to bluster, you may be down upon him with *insomnia Jovis*, reveries of Jupiter—a phrase which Silius Italicus (see here!) applies to thoughts pompous and inflated. This will be sure and cut him to the heart. He can do nothing but roll over and die. Will you be kind enough to write?

“In Greek we must have some thing pretty—from Demosthenes, for example. *Ἄνὴρ ὁ φεύγων καὶ πάλιν μαχήσεται*. [Aner o pheugon kai palin makesetai.] There is a tolerably good translation of it in Hudibras—

“ ‘ For he that flies may fight again,
Which he can never do that 's slain ’

In a Blackwood article nothing makes so fine a show as your Greek. The very letters have an air of profundity about them. Only observe, madam, the astute look of that Epsilon! That Phi ought certainly to be a bishop! Was ever there a smarter fellow than that Omicron? Just twig that Tau! In short, there is nothing like Greek for a genuine sensation-paper. In the present case your application is the most obvious thing in the world. Rap out the sentence with a huge oath and by way of *ultimatum* at the good-for-nothing dunder-headed villain who couldn't understand your plain English in relation to the chicken-bone. He'll take the hint and be off, you may depend upon it.”

These were all the instructions Mr. B. could afford me upon the topic in question, but I felt they would be entirely sufficient. I was, at length, able to write a genuine Blackwood article, and determined to do it forthwith. In taking leave of me, Mr. B. made a proposition for the purchase of the paper when written; but as he could offer me only fifty guineas a sheet, I thought it better to let our society have it, than sacrifice it for so paltry a sum. Notwithstanding this niggardly spirit, however, the gentleman showed his consideration for me in all other respects, and indeed treated me with the greatest civility. His parting words made a deep impression upon my heart, and I hope I shall always remember them with gratitude.

"My dear Miss Zenobia," he said, while the tears stood in his eyes, "is there *any* thing else I can do to promote the success of your laudable undertaking? Let me reflect! It is just possible that you may not be able, so soon as convenient, to—to—get yourself drowned, or—choked with a chicken-bone, or—or hung,—or—bitten by a—but stay! Now I think me of it, there are a couple of very excellent bull-dogs in the yard—fine fellows, I assure you—savage, and all that—indeed just the thing for your money—they'll have you eaten up, *auriculas* and all, in less than five minutes (here's my watch!)—and then only think of the sensations! Here! I say—Tom!—Peter!—Dick, you villain!—let out those"—but as I was really in a great hurry, and had not another moment to spare, I was

reluctantly forced to expedite my departure, and accordingly took leave *at once*—somewhat more abruptly, I admit, than strict courtesy would have otherwise allowed.

It was my primary object upon quitting Mr. Blackwood, to get into some immediate difficulty, pursuant to his advice, and with this view I spent the greater part of the day in wandering about Edinburgh, seeking for desperate adventures—adventures adequate to the intensity of my feelings, and adapted to the vast character of the article I intended to write. In this excursion I was attended by one negro-servant, Pompey, and my little lap-dog Diana, whom I had brought with me from Philadelphia. It was not, however, until late in the afternoon that I fully succeeded in my arduous undertaking. An important event then happened of which the following Blackwood article, in the tone heterogeneous, is the substance and result.

NOTE—See also “Loss of Breath,” vol. VIII., present edition.—EDITOR.

A PREDICAMENT

[Published in the *American Museum*, December, 1838, under the title of "The Scythe of Time."]

What chance, good lady, hath bereft you thus?—COMUS.

It was a quiet and still afternoon when I strolled forth in the goodly city of Edina. The confusion and bustle in the streets were terrible. Men were talking. Women were screaming. Children were choking. Pigs were whistling. Carts they rattled. Bulls they bellowed. Cows they lowed. Horses they neighed. Cats they caterwauled. Dogs they danced. *Danced!* Could it then be possible? *Danced!* Alas, thought I, *my* dancing days are over! Thus it is ever. What a host of gloomy recollections will ever and anon be awakened in the mind of genius and imaginative contemplation, especially of a genius doomed to the everlasting, and eternal, and continual, and, as one might say, the—*continued*—yes, the *continued and continuous*, bitter, harassing, disturbing, and, if I may be allowed the expression, the *very* disturbing influence of the serene, and god-like, and heavenly,

and exalting, and elevated, and purifying effect of what may be rightly termed the most enviable, the most *truly* enviable—nay! the most benignly beautiful, the most deliciously ethereal, and, as it were, the most *pretty* (if I may use so bold an expression) *thing* (pardon me, gentle reader!) in the world—but I am always led away by my feelings. In *such* a mind, I repeat, what a host of recollections are stirred up by a trifle! The dogs danced! *I—I could* not! They frisked—I wept. They capered—I sobbed aloud. Touching circumstances! which cannot fail to bring to the recollection of the classical reader that exquisite passage in relation to the fitness of things, which is to be found in the commencement of the third volume of that admirable and venerable Chinese novel the *Jo-Go-Slow*.

In my solitary walk through the city I had two humble but faithful companions. Diana, my poodle! sweetest of creatures! She had a quantity of hair over her one eye, and a blue riband tied fashionably around her neck. Diana was not more than five inches in height, but her head was somewhat bigger than her body, and her tail being cut off exceedingly close, gave an air of injured innocence to the interesting animal which rendered her a favorite with all.

And Pompey, my negro!—sweet Pompey, how shall I ever forget thee? I had taken Pompey's arm. He was three feet in height (I like to be particular) and about seventy, or perhaps eighty, years of age. He had bow-legs and was corpulent. His mouth could not be called small, nor

his ears short. His teeth, however, were like pearl, and his large full eyes were deliciously white. Nature had endowed him with no neck, and had placed his ankles (as usual with that race) in the middle of the upper portion of the feet. He was clad with a striking simplicity. His sole garments were a stock of nine inches in height, and a nearly-new drab overcoat which had formerly been in the service of the tall, stately, and illustrious Dr. Moneypenny. It was a good overcoat. It was well cut. It was well made. The coat was nearly new. Pompey held it up out of the dirt with both hands.

There were three persons in our party, and two of them have already been the subject of remark. There was a third—that person was myself. I am the Signora Psyche Zenobia. I am *not* Suky Snobbs. My appearance is commanding. On the memorable occasion of which I speak I was habited in a crimson satin dress, with a sky-blue Arabian mantelet. And the dress had trimmings of green agraffas, and seven graceful flounces of the orange colored auricula. I thus formed the third of the party. There was the poodle. There was Pompey. There was myself. We were *three*. Thus it is said there were originally but three Furies—Melty, Nimmy, and Hetty—Meditation, Memory, and Fiddling.

Leaning upon the arm of the gallant Pompey, and attended at a respectable distance by Diana, I proceeded down one of the populous and very pleasant streets of the now deserted Edina. On a sudden, there presented itself to view a church

—a Gothic cathedral—vast, venerable, and with a tall steeple, which towered into the sky. What madness now possessed me? Why did I rush upon my fate? I was seized with an uncontrollable desire to ascend the giddy pinnacle, and there survey the immense extent of the city. The door of the cathedral stood invitingly open. My destiny prevailed. I entered the ominous archway. Where then was my guardian angel?—if indeed such angels there be. *If!* Distressing monosyllable! what a world of mystery, and meaning, and doubt, and uncertainty is there involved in thy two letters! I entered the ominous archway! I entered; and, without injury to my orange-colored auriculas, I passed beneath the portal, and emerged within the vestibule. Thus it is said the immense river Alfred passed, unscathed, and unwetted, beneath the sea.

I thought the staircase would never have an end. *Round!* Yes, they went round and up, and round and up and round and up, until I could not help surmising, with the sagacious Pompey, upon whose supporting arm I leaned in all the confidence of early affection—I *could* not help surmising that the upper end of the continuous spiral ladder had been accidentally, or perhaps designedly, removed. I paused for breath; and, in the meantime, an accident occurred of too momentous a nature in a moral, and also in a metaphysical point of view, to be passed over without notice. It appeared to me—indeed I was quite confident of the fact—I could not be mistaken—no! I had, for some moments, carefully and

anxiously observed the motions of my Diana—I say that *I could not be mistaken*—Diana *smelt a rat!* At once I called Pompey's attention to the subject, and he—he agreed with me. There was then no longer any reasonable room for doubt. The rat had been smelled—and by Diana. Heavens! shall I ever forget the intense excitement of the moment? The rat!—it was there—that is to say, it was somewhere. Diana smelled the rat. I—I *could not!* Thus it is said the Prussian Iris has, for some persons, a sweet and very powerful perfume, while to others it is perfectly scentless.

The staircase has been surmounted, and there were now only three or four more upward steps intervening between us and the summit. We still ascended, and now only one step remained. One step! One little, little step! Upon one such little step in the great staircase of human life how vast a sun of human happiness or misery depends! I thought of myself, then of Pompey, and then of the mysterious and inexplicable destiny which surrounded us. I thought of Pompey!—alas, I thought of love! I thought of my many false *steps* which have been taken, and may be taken again. I resolved to be more cautious, more reserved. I abandoned the arm of Pompey, and, without his assistance, surmounted the one remaining step, and gained the chamber of the belfry. I was followed immediately afterward by my poodle. Pompey alone remained behind. I stood at the head of the staircase, and encouraged him to ascend. He stretched

forth to me his hand, and unfortunately in so doing was forced to abandon his firm hold upon the overcoat. Will the gods never cease their persecution? The overcoat is dropped, and, with one of his feet, Pompey stepped upon the long and trailing skirt of the overcoat. He stumbled and fell—this consequence was inevitable. He fell forward, and, with his accursed head, striking me full in the—in the breast, precipitated me headlong, together with himself, upon the hard, filthy, and detestable floor of the belfry. But my revenge was sure, sudden, and complete. Seizing him furiously by the wool with both hands, I tore out a vast quantity of black, and crisp, and curling material, and tossed it from me with every manifestation of disdain. It fell among the ropes of the belfry and remained. Pompey arose, and said no word. But he regarded me piteously with his large eyes and—sighed. Ye Gods—that sigh! It sunk into my heart. And the hair—the wool! Could I have reached that wool I would have bathed it with my tears, in testimony of regret. But alas! it was now far beyond my grasp. As it dangled among the cordage of the bell, I fancied it alive. I fancied that it stood on end with indignation. Thus the *happydandy Flos Aeris* of Java, bears, it is said, a beautiful flower, which will live when pulled up by the roots. The natives suspend it by a cord from the ceiling and enjoy its fragrance for years.

Our quarrel was now made up, and we looked about the room for an aperture through which

to survey the city of Edina. Windows there were none. The sole light admitted into the gloomy chamber proceeded from a square opening, about a foot in diameter, at a height of about seven feet from the door. Yet what will the energy of true genius not effect? I resolved to clamber up to this hole. A vast quantity of wheels, pinions, and other cabalistic-looking machinery stood opposite the hole, close to it; and through the hole there passed an iron rod from the machinery. Between the wheels and the wall where the hole lay there was barely room for my body—yet I was desperate, and determined to persevere. I called Pompey to my side.

“You perceive that aperture, Pompey. I wish to look through it. You will stand here just beneath the hole—so. Now, hold out one of your hands, Pompey, and let me step upon it—thus. Now, the other hand, Pompey, and with its aid I will get upon your shoulders.”

He did every thing I wished, and I found, upon getting up, that I could easily pass my head and neck through the aperture. The prospect was sublime. Nothing could be more magnificent. I merely paused a moment to bid Diana behave herself, and assure Pompey that I would be considerate and bear as lightly as possible upon his shoulders. I told him I would be tender of his feelings—*ossi tender que beefsteak*. Having done this justice to my faithful friend, I gave myself up with great zest and enthusiasm to the enjoyment of the scene which so obligingly spread itself out before my eyes.

Upon this subject, however, I shall forbear to dilate. I will not describe the city of Edinburgh. Every one has been to the city of Edinburgh. Every one has been to Edinburgh—the classic Edina. I will confine myself to the momentous details of my own lamentable adventure. Having, in some measure, satisfied my curiosity in regard to the extent, situation, and general appearance of the city, I had leisure to survey the church in which I was, and the delicate architecture of the steeple. I observed that the aperture through which I had thrust my head was an opening in the dial-plate of a gigantic clock, and must have appeared, from the street, as a large key-hole, such as we see in the face of the French watches. No doubt the true object was to admit the arm of an attendant, to adjust, when necessary, the hands of the clock from within. I observed also, with surprise, the immense size of these hands, the longest of which could not have been less than ten feet in length, and, where broadest, eight or nine inches in breadth. They were of solid steel apparently, and their edges appeared to be sharp. Having noticed these particulars, and some others, I again turned my eyes upon the glorious prospect below, and soon became absorbed in contemplation.

From this, after some minutes, I was aroused by the voice of Pompey, who declared that he could stand it no longer, and requested that I would be so kind as to come down. This was unreasonable, and I told him so in a speech of some length. He replied but with an evident mis-

understanding of my ideas upon the subject. I accordingly grew angry, and told him in plain words, that he was a fool, that he had committed an *ignoramus e-clench-eye*, that his notions were mere *insommary Bovis*, and his words little better than an *ennemywerrybor'em*. With this he appeared satisfied, and I resumed my contemplations.

It might have been half an hour after this altercation when, as I was deeply absorbed in the heavenly scenery beneath me, I was startled by something very cold which pressed with a gentle pressure on the back of my neck. It is needless to say that I felt inexpressibly alarmed. I knew that Pompey was beneath my feet, and that Diana was sitting, according to my explicit directions, upon her hind legs, in the farthest corner of the room. What could it be? Alas! I but too soon discovered. Turning my head gently to one side, I perceived, to my extreme horror, that the huge, glittering, scimitar-like minute-hand of the clock had, in the course of its hourly revolution, *descended upon my neck*. There was, I knew, not a second to be lost. I pulled back at once—but it was too late. There was no chance of forcing my head through the mouth of that terrible trap in which it was so fairly caught, and which grew narrower and narrower with a rapidity too horrible to be conceived. The agony of that moment is not to be imagined. I threw up my hands and endeavored, with all my strength, to force upward the ponderous iron bar. I might as well have tried to

lift the cathedral itself. Down, down, down it came, closer and yet closer. I screamed to Pompey for aid; but he said that I had hurt his feelings by calling him "an ignorant old squint-eye." I yelled to Diana; but she only said "bow-wow-wow," and that I had told her "on no account to stir from the corner." Thus I had no relief to expect from my associates.

Meantime the ponderous and terrific *Scythe of Time* (for I now discovered the literal import of that classical phrase) had not stopped, nor was it likely to stop, in its career. Down and still down, it came. It had already buried its sharp edge a full inch in my flesh, and my sensations grew indistinct and confused. At one time I fancied myself in Philadelphia with the stately Dr. Money penny, at another in the back parlor of Mr. Blackwood receiving his invaluable instructions. And then again the sweet recollection of better and earlier times came over me, and I thought of that happy period when the world was not all a desert, and Pompey not altogether cruel.

The ticking of the machinery amused me. *Amused me*, I say, for my sensations now bordered upon perfect happiness, and the most trifling circumstances afforded me pleasure. The *click-clack, click-clack, click-clack* of the clock was the most melodious of music in my ears, and occasionally even put me in mind of the graceful sermonic harangues of Dr. Ollapod. Then there were the great figures upon the dial-plate—how intelligent, how intellectual, they all looked!

And presently they took to dancing the Mazurka, and I think it was the figure V who performed the most to my satisfaction. She was evidently a lady of breeding. None of your swaggerers, and nothing at all indelicate in her motions. She did the pirouette to admiration—whirling round upon her apex. I made an endeavor to hand her a chair, for I saw that she appeared fatigued with her exertions—and it was not until then that I fully perceived my lamentable situation. Lamentable indeed! The bar had buried itself two inches in my neck. I was aroused to a sense of exquisite pain. I prayed for death, and, in the agony of the moment, could not help repeating those exquisite verses of the poet Miguel De Cervantes:

Vanny Buren, tan escondida
Query no te senty venny
Pork and pleasure, delly morry
Nommy, torny, darry, widdy!

But now a new horror presented itself, and one indeed sufficient to startle the strongest nerves. My eyes, from the cruel pressure of the machine, were absolutely starting from their sockets. While I was thinking how I should possibly manage without them, one actually tumbled out of my head, and, rolling down the steep side of the steeple, lodged in the rain gutter which ran along the eaves of the main building. The loss of the eye was not so much as the insolent air of independence and contempt with which it regarded me after it was out. There it lay in the gutter just under my nose, and the

airs it gave itself would have been ridiculous had they not been disgusting. Such a winking and blinking were never before seen. This behavior on the part of my eye in the gutter was not only irritating on account of its manifest insolence and shameful ingratitude, but was also exceedingly inconvenient on account of the sympathy which always exists between two eyes of the same head, however far apart. I was forced, in a manner, to wink and to blink, whether I would or not, in exact concert with the scoundrelly thing that lay just under my nose. I was presently relieved, however, by the dropping out of the other eye. In falling it took the same direction (possibly a concerted plot) as its fellow. Both rolled out of the gutter together, and in truth I was very glad to get rid of them.

The bar was now four inches and a half deep in my neck, and there was only a little bit of skin to cut through. My sensations were those of entire happiness, for I felt that in a few minutes, at farthest, I should be relieved from my disagreeable situation. And in this expectation I was not at all deceived. At twenty-five minutes past five in the afternoon, precisely, the huge minute-hand had proceeded sufficiently far on its terrible revolution to sever the small remainder of my neck. I was not sorry to see the head which had occasioned me so much embarrassment at length make a final separation from my body. It first rolled down the side of the steeple, then lodged, for a few seconds, in the gutter, and then

made its way, with a plunge, into the middle of the street.

I will candidly confess that my feelings were now the most singular—nay, of the most mysterious, the most perplexing and incomprehensible character. My senses were here and there at one and the same moment. With my head I imagined, at one time, that I the head, was the real Signora Psyche Zenobia—at another I felt convinced that myself, the body, was the proper identity. To clear my ideas on this topic I felt in my pocket for my snuff-box, but, upon getting it, and endeavoring to apply a pinch of its grateful contents in the ordinary manner, I became immediately aware of my peculiar deficiency, and threw the box at once down to my head. It took a pinch with great satisfaction, and smiled me an acknowledgement in return. Shortly afterward it made me a speech, which I could hear but indistinctly without ears. I gathered enough, however, to know that it was astonished at my wishing to remain alive under such circumstances. In the concluding sentences it quoted the noble words of Ariosto—

*Il pover hommy che non sera corty
And have a combat tenty erry morty;*

thus comparing me to the hero who, in the heat of the combat, not perceiving that he was dead, continued to contest the battle with inextinguishable valor. There was nothing now to prevent my getting down from my elevation, and I did so. What it was that Pompey saw so *very* pecu-

liar in my appearance I have never yet been able to find out. The fellow opened his mouth from ear to ear, and shut his two eyes as if he were endeavoring to crack nuts between the lids. Finally, throwing off his overcoat, he made one spring for the staircase and disappeared. I hurled after the scoundrel these vehement words of Demosthenes—

Andrew O'Phlegethon, you really make haste to fly.

and then turned to the darling of my heart, to the one-eyed! the shaggy-haired Diana. Alas! what a horrible vision affronted my eyes? *Was* that a rat I saw skulking into his hole? *Are* these the picked bones of the little angel who has been cruelly devoured by the monster? Ye Gods! and what *do* I behold—is that the departed spirit, the shade, the ghost of my beloved puppy, which I perceive sitting with a grace so melancholy, in the corner? Harken! for she speaks, and, heavens! it is in the German of Schiller—

“Unt stubby duk, so stubby dun
Duk she! duk she!”

Alas! and are not her words too true?

And if I died at least I died
For thee—for thee.

Sweet creature! she *too* has sacrificed herself in my behalf. Dogless, niggerless, headless, what *now* remains for the unhappy Signora Psyche Zenobia? Alas—*nothing*! I have done.

DIDDLELING

CONSIDERED AS ONE OF THE EXACT SCIENCES

[Published in the *Broadway Journal*, II., 10.]

Hey, diddle diddle,
The cat and the fiddle.

SINCE the world began there have been two Jeremys. The one wrote a Jeremiad about usury, and was called Jeremy Bentham. He has been much admired by Mr. John Neal, and was a great man in a small way. The other gave name to the most important of the Exact Sciences, and was a great man in a *great* way—I may say, indeed, in the very greatest of ways.

Diddling—or the abstract idea conveyed by the verb to diddle—is sufficiently well understood. Yet the fact, the deed, the thing, *diddling*, is somewhat difficult to define. We may get, however, at a tolerably distinct conception of the matter in hand, by defining—not the thing, diddling, in itself—but man, as an animal that diddles. Had Plato but hit upon this, he would have been spared the affront of the picked chicken.

Very pertinently it was demanded of Plato, why a picked chicken, which was clearly a "biped without feathers," was not, according to his own definition, a man? But I am not to be bothered by any similar query. Man is an animal that diddles, and there is *no* animal that diddles *but* man. It will take an entire hen-coop of picked chickens to get over that.

What constitutes the essence, the nare, the principle of diddling is, in fact, peculiar to the class of creatures that wear coats and pantaloons. A crow thieves; a fox cheats; a weasel outwits; a man diddles. To diddle is his destiny. "Man was made to mourn," says the poet. But not so:—he was made to diddle. This is his aim—his object—his *end*. And for this reason when a man's diddled we say he's "*done*."

Diddling, rightly considered, is a compound, of which the ingredients are minuteness, interest, perseverance, ingenuity, audacity, *nonchalance*, originality, impertinence, and *grin*.

Minuteness:—Your diddler is minute. His operations are upon a small scale. His business is retail, for cash, or approved paper at sight. Should he ever be tempted into magnificent speculation, he then, at once, loses his distinctive features, and becomes what we term "financier." This latter word conveys the diddling idea in every respect except that of magnitude. A diddler may thus be regarded as a banker *in petto*—a "financial operation," as a diddle at Brobdignag. The one is to the other, as Homer to

“Flaccus”—as a Mastodon to a mouse—as the tail of a comet to that of a pig.

Interest:—Your diddler is guided by self-interest. He scorns to diddle for the mere *sake* of the diddle. He has an object in view—his pocket—and yours. He regards always the main chance. He looks to Number One. You are Number Two, and must look to yourself.

Perseverance:—Your diddler perseveres. He is not readily discouraged. Should even the banks break, he cares nothing about it. He steadily pursues his end, and

Ut canis a corio nunquam absterrebitur uncto,

so he never lets go of his game.

Ingenuity:—Your diddler is ingenious. He has constructiveness large. He understands plot. He invents and circumvents. Were he not Alexander he would be Diogenes. Were he not a diddler, he would be a maker of patent rat-traps or an angler for trout.

Audacity:—Your diddler is audacious.—He is a bold man. He carries the war into Africa. He conquers all by assault. He would not fear the daggers of the Frey Herren. With a little more prudence Dick Turpin would have made a good diddler; with a trifle less blarney, Daniel O’Connell; with a pound or two more brains, Charles the Twelfth.

Nonchalance:—Your diddler is *nonchalant*. He is not at all nervous. He never *had* any nerves. He is never seduced into a flurry. He is never put out—unless put out of doors. He

is cool—cool as a cucumber. He is calm—“calm as a smile from Lady Bury.” He is easy—easy as an old glove, or the damsels of ancient Baiæ.

Originality:—Your diddler is original—conscientiously so. His thoughts are his own. He would scorn to employ those of another. A stale trick is his aversion. He would return a purse, I am sure, upon discovering that he had obtained it by an unoriginal diddle.

Impertinence:—Your diddler is impertinent. He swaggers. He sets his arms a-kimbo. He thrusts his hands in his trowsers’ pocket. He sneers in your face. He treads on your corns. He eats your dinner, he drinks your wine, he borrows your money, he pulls your nose, he kicks your poodle, and he kisses your wife.

Grin:—Your *true* diddler winds up all with a grin. But this nobody sees but himself. He grins when his daily work is done—when his allotted labors are accomplished—at night in his own closet, and altogether for his own private entertainment. He goes home. He locks his door. He divests himself of his clothes. He puts out his candle. He gets into bed. He places his head upon the pillow. All this done, and your diddler *grins*. This is no hypothesis. It is a matter of course. I reason *a priori*, and a diddle would be *no* diddle without a grin.

The origin of the diddle is referrible to the infancy of the Human Race. Perhaps the first diddler was Adam. At all events, we can trace the science back to a very remote period of an-

tiquity. The moderns, however, have brought it to a perfection never dreamed of by our thick-headed progenitors. Without pausing to speak of the "old saws," therefore, I shall content myself with a compendious account of some of the more "modern instances."

A very good diddle is this. A housekeeper in want of a sofa, for instance, is seen to go in and out of several cabinet warehouses. At length she arrives at one offering an excellent variety. She is accosted, and invited to enter, by a polite and voluble individual at the door. She finds a sofa well adapted to her views, and upon inquiring the price, is surprised and delighted to hear a sum named at least twenty per cent. lower than her expectations. She hastens to make the purchase, gets a bill and receipt, leaves her address, with a request that the article be sent home as speedily as possible, and retires amid a profusion of bows from the shop-keeper. The night arrives and no sofa. The next day passes, and still none. A servant is sent to make inquiry about the delay. The whole transaction is denied. No sofa has been sold—no money received—except by the diddler, who played shop-keeper for the nonce.

Our cabinet warehouses are left entirely unattended, and thus afford every facility for a trick of this kind. Visitors enter, look at furniture, and depart unheeded and unseen. Should any one wish to purchase, or to inquire the price of an article, a bell is at hand, and this is considered amply sufficient.

Again, quite a respectable diddle is this. A well-dressed individual enters a shop; makes a purchase to the value of a dollar; finds, much to his vexation, that he has left his pocket-book in another coat pocket; and so says to the shop-keeper—

“My dear sir, never mind!—just oblige me, will you, by sending the bundle home? But stay! I really believe that I have nothing less than a five dollar bill, even *there*. However, you can send four dollars in change *with* the bundle, you know.”

“Very good, sir,” replies the shop-keeper, who entertains, at once, a lofty opinion of the high-mindedness of his customer. “I know fellows,” he says to himself, “who would just have put the goods under their arm, and walked off with a promise to call and pay the dollar as they came by in the afternoon.”

A boy is sent with the parcel and change. On the route, quite accidentally, he is met by the purchaser, who exclaims:

“Ah! this is my bundle, I see—I thought you had been home with it, long ago. Well, go on! My wife, Mrs. Trotter, will give you the five dollars—I left instructions with her to that effect. The change you might as well give to *me*—I shall want some silver for the Post Office. Very good! One, two, is this a good quarter?—three, four—quite right! Say to Mrs. Trotter that you met me, and be sure now and *do not* loiter on the way.”

The boy doesn't loiter at all—but he is a very

long time in getting back from his errand—for no lady of the precise name of Mrs. Trotter is to be discovered. He consoles himself, however, that he has not been such a fool as to leave the goods without the money, and re-entering his shop with a self-satisfied air, feels sensibly hurt and indignant when his master asks him what has become of the change.

A very simple diddle, indeed, is this. The captain of a ship which is about to sail, is presented by an official looking person with an unusually moderate bill of city charges. Glad to get off so easily, and confused by a hundred duties pressing upon him all at once, he discharges the claim forthwith. In about fifteen minutes, another and less reasonable bill is handed him by one who soon makes it evident that the first collector was a diddler, and the original collection a diddle.

And here, too, is a somewhat similar thing. A steamboat is casting loose from the wharf. A traveller, portmanteau in hand, is discovered running toward the wharf, at full speed. Suddenly, he makes a dead halt, stoops, and picks up something from the ground in a very agitated manner. It is a pocket-book, and—"Has any gentleman lost a pocket-book?" he cries. No one can say that he has exactly lost a pocket-book; but a great excitement ensues, when the treasure trove is found to be of value. The boat, however, must not be detained.

"Time and tide wait for no man," says the captain.

"For God's sake, stay only a few minutes," says the finder of the book—"the true claimant will presently appear."

"Can't wait!" replies the man in authority; "cast off there, d'ye hear?"

"What *am* I to do?" asks the finder, in great tribulation. "I am about to leave the country for some years, and I cannot conscientiously retain this large amount in my possession. I beg your pardon, sir," [here he addresses a gentleman on shore,] "but you have the air of an honest man. *Will* you confer upon me the favor of taking charge of this pocket-book—I ~~know~~ I can trust you—and of advertising it? The notes, you see, amount to a very considerable sum. The owner will, no doubt, insist upon rewarding you for your trouble—"

"*Me!*—no, *you!*—it was *you* who found the book."

"Well, if you *must* have it so—I will take a small reward—just to satisfy your scruples. Let me see—why these notes are all hundreds—bless my soul! a hundred is too much to take—fifty would be quite enough, I am sure—"

"Cast off there!" says the captain.

"But then I have no change for a hundred, and upon the whole, *you* had better—"

"Cast off there!" says the captain.

"Never mind!" cries the gentleman on shore, who has been examining his own pocket-book for the last minute or so—"never mind! I can fix it—here is a fifty on the Bank of North America—throw me the book."

And the over-conscientious finder takes the fifty with marked reluctance, and throws the gentleman the book, as desired, while the steam-boat fumes and fizzes on her way. In about half an hour after her departure, the "large amount" is seen to be a "counterfeit presentment," and the whole thing a capital diddle.

A bold diddle is this. A camp-meeting, or something similar, is to be held at a certain spot which is accessible only by means of a free bridge. A diddler stations himself upon this bridge, respectfully informs all passers by of the new county law, which establishes a toll of one cent for foot passengers, two for horses and donkeys, and so forth, and so forth. Some grumble, but all submit, and the diddler goes home a wealthier man by some fifty or sixty dollars well earned. This taking a toll from a great crowd of people is an excessively troublesome thing.

A neat diddle is this. A friend holds one of the diddler's promises to pay, filled up and signed in due form, upon the ordinary blanks printed in red ink. The diddler purchases one or two dozen of these blanks, and every day dips one of them in his soup, makes his dog jump for it, and finally gives it to him as a *bonne bouche*. The note arriving at maturity, the diddler, with the diddler's dog, calls upon the friend, and the promise to pay is made the topic of discussion. The friend produces it from his *escritoire*, and is in the act of reaching it to the diddler, when up jumps the diddler's dog and devours it forth-

with. The diddler is not only surprised but vexed and incensed at the absurd behavior of his dog, and expresses his entire readiness to cancel the obligation at any moment when the evidence of the obligation shall be forthcoming.

A very minute diddle is this. A lady is insulted in the street by a diddler's accomplice. The diddler himself flies to her assistance, and, giving his friend a comfortable thrashing, insists upon attending the lady to her own door. He bows, with his hand upon his heart, and most respectfully bids her adieu. She entreats him, as her deliverer, to walk in and be introduced to her big brother and her papa. With a sigh, he declines to do so. "Is there no way, then, sir," she murmurs, "in which I may be permitted to testify my gratitude?"

"Why, yes, madam, there is. Will you be kind enough to lend me a couple of shillings?"

In the first excitement of the moment the lady decides upon fainting outright. Upon second thought, however, she opens her purse-strings and delivers the specie. Now this, I say, is a diddle minute—for one entire moiety of the sum borrowed has to be paid to the gentleman who had the trouble of performing the insult, and who had then to stand still and be thrashed for performing it.

Rather a small, but still a scientific diddle is this. The diddler approaches the bar of a tavern, and demands a couple of twists of tobacco. These are handed to him, when, having slightly examined them, he says:

"I don't much like this tobacco. Here, take it back, and give me a glass of brandy and water in its place."

The brandy and water is furnished and imbibed, and the diddler makes his way to the door. But the voice of the tavern-keeper arrests him.

"I believe, sir, you have forgotten to pay for your brandy and water."

"Pay for my brandy and water!—didn't I give you the tobacco for the brandy and water? What more would you have?"

"But, sir, if you please, I don't remember that you paid me for the tobacco."

"What do you mean by that, you scoundrel?—Did n't I give you back your tobacco? Is n't *that* your tobacco lying *there*? Do you expect me to pay for what I did not take?"

"But, sir," says the publican, now rather at a loss what to say, "but, sir—"

"But me no buts, sir," interrupts the diddler, apparently in very high dudgeon, and slamming the door after him, as he makes his escape.—"But me no buts, sir, and none of your tricks upon travellers."

Here again is a very clever diddle, of which the simplicity is not its least recommendation. A purse, or pocket-book, being really lost, the loser inserts in *one* of the daily papers of a large city a fully descriptive advertisement.

Whereupon our diddler copies the *facts* of this advertisement, with a change of heading, of general phraseology, and *address*. The original, for instance, is long, and verbose, is headed, "A

Pocket-Book Lost! ” and requires the treasure, when found, to be left at No. 1 Tom Street. The copy is brief, and being headed with “Lost” only, indicates No. 2 Dick, or No. 3 Harry Street, as the locality in which the owner may be seen. Moreover, it is inserted in at least five or six of the daily papers of the day, while in point of time, it makes its appearance only a few hours after the original. Should it be read by the loser of the purse, he would hardly suspect it to have any reference to his own misfortune. But, of course, the chances are five or six to one, that the finder will repair to the address given by the diddler, rather than to that pointed out by the rightful proprietor. The former pays the reward, pockets the treasure and decamps.

Quite an analogous diddle is this. A lady of ton has dropped, somewhere in the street, a diamond ring of very unusual value. For its recovery, she offers some forty or fifty dollars reward—giving, in her advertisement, a very minute description of the gem, and of its settings, and declaring that, on its restoration at No. so and so, in such and such Avenue, the reward would be paid *instantly*, without a single question being asked. During the lady’s absence from home, a day or two afterwards, a ring is heard at the door of No. so and so, in such and such Avenue; a servant appears; the lady of the house is asked for and is declared to be out, at which astounding information, the visitor expresses the most poignant regret. His

business is of importance and concerns the lady herself. In fact, he had the good fortune to find her diamond ring. But perhaps it would be as well that he should call again. "By no means!" says the servant; and "By no means!" says the lady's sister and the lady's sister-in-law, who are summoned forthwith. The ring is clamorously identified, the reward is paid, and the finder nearly thrust out of doors. The lady returns and expresses some little dissatisfaction with her sister and sister-in-law, because they happen to have paid forty or fifty dollars for a *fac-simile* of her diamond ring—a *fac-simile* made out of real pinch-beck and unquestionable paste.

But as there is really no end to diddling, so there would be none to this essay, were I even to hint at half the variations, or inflections, of which this science is susceptible. I must bring this paper, perforce, to a conclusion, and this I cannot do better than by a summary notice of a very decent, but rather elaborate diddle, of which our own city was made the theatre, not very long ago, and which was subsequently repeated with success, in other still more verdant localities of the Union. A middle-aged gentleman arrives in town from parts unknown. He is remarkably precise, cautious, staid, and deliberate in his demeanor. His dress is scrupulously neat, but plain, unostentatious. He wears a white cravat, an ample waist-coat, made with an eye to comfort alone; thick-soled cosy-looking shoes, and pantaloons without straps.

He has the whole air, in fact, of your well-to-do, sober-sided, exact, and respectable "man of business," *par excellence*—one of the stern and outwardly hard, internally soft, sort of people that we see in the crack high comedies—fellows whose words are so many bonds, and who are noted for giving away guineas, in charity, with the one hand, while, in the way of mere bargain, they exact the uttermost fraction of a farthing with the other.

He makes much ado before he can get suited with a boarding-house. He dislikes children. He has been accustomed to quiet. His habits are methodical—and then he would prefer getting into a private and respectable small family, piously inclined. Terms, however, are no object—only he must insist upon settling his bill on the first of every month, (it is now the second) and begs his landlady, when he finally obtains one to his mind, *not* on any account to forget his instructions upon this point—but to send in a bill, *and* receipt, precisely at ten o'clock on the *first* day of every month, and under no circumstances to put it off to the second.

These arrangements made, our man of business rents an office in a reputable rather than a fashionable quarter of the town. There is nothing he more despises than pretence. "Where there is much show," he says, "there is seldom any thing very solid behind"—an observation which so profoundly impresses his landlady's fancy, that she makes a pencil memorandum of

it forthwith, in her great family Bible, on the broad margin of the Proverbs of Solomon.

The next step is to advertise, after some such fashion as this, in the principal business six-pennies of the city—the pennies are eschewed as not “respectable”—and as demanding payment for all advertisements in advance. Our man of business holds it as a point of his faith that work should never be paid for until done.

WANTED.—The advertisers, being about to commence extensive business operations in this city, will require the services of three or four intelligent and competent clerks, to whom a liberal salary will be paid. The very best recommendations, not so much for capacity, as for integrity, will be expected. Indeed, as the duties to be performed, involve high responsibilities, and large amounts of money must necessarily pass through the hands of those engaged, it is deemed advisable to demand a deposit of fifty dollars from each clerk employed. No person need apply, therefore, who is not prepared to leave this sum in the possession of the advertisers, and who cannot furnish the most satisfactory testimonials of morality. Young gentlemen piously inclined will be preferred. Application should be made between the hours of ten and eleven A.M., and four and five P.M., of Messrs.

Bogs, Hogs, Logs, Frogs, & Co.,
No. 110 Dog Street.

By the thirty-first day of the month, this advertisement has brought to the office of Messrs. Bogs, Hogs, Logs, Frogs and Company, some fifteen or twenty young gentlemen piously inclined. But our man of business is in no hurry to conclude a contract with any—no man of business is *ever* precipitate—and it is not until the

most rigid catechism in respect to the piety of each young gentleman's inclination, that his services are engaged and his fifty dollars receipted for, *just* by way of proper precaution, on the part of the respectable firm of Bogs, Hogs, Logs, Frogs, and Company. On the morning of the first day of the next month, the landlady does *not* present her bill, according to promise—a piece of neglect for which the comfortable head of the house ending in *ogs* would no doubt have chided her severely, could he have been prevailed upon to remain in town a day or two for that purpose.

As it is, the constables have had a sad time of it, running hither and thither, and all they can do is to declare the man of business most emphatically, a “hen knee high”—by which some persons imagine them to imply that, in fact, he is n. e. i.—by which again the very classical phrase *non est inventus*, is supposed to be understood. In the meantime the young gentlemen, one and all, are somewhat less piously inclined than before, while the landlady purchases a shilling's worth of the Indian rubber, and very carefully obliterates the pencil memorandum that some fool has made in her great family Bible, on the broad margin of the Proverbs of Solomon.

THE LITERARY LIFE OF THINGUM BOB, ESQ.

LATE EDITOR OF THE "GOOSETHERUMFOODLE"

BY HIMSELF

[Published in the *Southern Literary Messenger*,
December, 1844.]

I AM now growing in years, and—since I understand that Shakespeare and Mr. Emmons are deceased—it is not impossible that I may even die. It has occurred to me, therefore, that I may as well retire from the field of Letters and repose upon my laurels. But I am ambitious of signalizing my abdication of the literary sceptre by some important bequest to posterity; and, perhaps, I cannot do a better thing than just pen for it an account of my earlier career. My name, indeed, has been so long and so constantly before the public eye, that I am not only willing to admit the naturalness of the interest which it has everywhere excited, but ready to satisfy the extreme curiosity which it has inspired. In fact, it is no more than the duty of him who

achieves greatness to leave behind him, in his ascent, such landmarks as may guide others to be great. I propose, therefore, in the present paper (which I had some idea of calling "Memoranda to Serve for the Literary History of America") to give a detail of those important, yet feeble and tottering, first steps, by which, at length, I attained the high road to the pinnacle of human renown.

Of one's *very* remote ancestors it is superfluous to say much. My father, Thomas Bob, Esq., stood for many years at the summit of his profession, which was that of a merchant-barber, in the city of Smug. His warehouse was the resort of all the principal people of the place, and especially of the editorial corps—a body which inspires all about it with profound veneration and awe. For my own part, I regarded them as gods, and drank in with avidity the rich wit and wisdom which continuously flowed from their august mouths during the process of what is styled "lather." My first moment of positive inspiration must be dated from that ever-memorable epoch, when the brilliant conductor of the *Gad-Fly*, in the intervals of the important process just mentioned, recited aloud, before a conclave of our apprentices, an inimitable poem in honor of the "Only Genuine Oil-of-Bob" (so called from its talented inventor, my father), and for which effusion the editor of the *Fly* was remunerated with a regal liberality by the firm of Thomas Bob & Company, merchant-barbers.

The genius of the stanzas to the "Oil-of-Bob"

first breathed into me, I say, the divine *afflatus*. I resolved at once to become a great man, and to commence by becoming a great poet. That very evening I fell upon my knees at the feet of my father.

"Father," I said, "pardon me!—but I have a soul above lather. It is my firm intention to cut the shop. I would be an editor—I would be a poet—I would pen stanzas to the 'Oil-of-Bob.' Pardon me and aid me to be great!"

"My dear Thingum," replied my father, (I had been christened Thingum after a wealthy relative so surnamed,) "My dear Thingum," he said, raising me from my knees by the ears—"Thingum, my boy, you're a trump, and take after your father in having a soul. You have an immense head, too, and it must hold a great many brains. This I have long seen, and therefore had thoughts of making you a lawyer. The business, however, has grown ungenteel, and that of politician don't pay. Upon the whole you judge wisely;—the trade of editor is best:—and if you can be a poet at the same time,—as most of the editors are, by the by,—why, you will kill two birds with one stone. To encourage you in the beginning of things, I will allow you a garret; pen, ink, and paper; a rhyming dictionary; and a copy of the *Gad-Fly*. I suppose you would scarcely demand any more."

"I would be an ungrateful villain if I did," I replied with enthusiasm. "Your generosity is boundless. I will repay it by making you the father of a genius."

Thus ended my conference with the best of men, and immediately upon its termination I betook myself with zeal to my poetical labors; as upon these, chiefly, I founded my hopes of ultimate elevation to the editorial chair.

In my first attempts at composition I found the stanzas to "The Oil-of-Bob" rather a drawback than otherwise. Their splendor more dazzled than enlightened me. The contemplation of their excellence tended, naturally, to discourage me by comparison with my own abortions; so that for a long time I labored in vain. At length there came into my head one of those exquisitely original ideas which now and then *will* permeate the brain of a man of genius. It was this:—or, rather, thus was it carried into execution. From the rubbish of an old book-stall, in a very remote corner of the town, I got together several antique and altogether unknown or forgotten volumes. The bookseller sold them to me for a song. From one of these, which purported to be a translation of one Dante's "Inferno," I copied with remarkable neatness a long passage about a man named Ugolino, who had a parcel of brats. From another, which contained a good many old plays by some person whose name I forget, I extracted in the same manner, and with the same care, a great number of lines about "angels" and "ministers saying grace," and "goblins damned," and more besides of that sort. From a third, which was the composition of some blind man or other, either a Greek or a Choctaw—I cannot be at the pains of remembering every trifle exactly,

—I took about fifty verses beginning with “Achilles’ wrath,” and “grease,” and something else. From a fourth, which I recollect was also the work of a blind man, I selected a page or two all about “hail” and “holy light”; and, although a blind man has no business to write about light, still the verses were sufficiently good in their way.

Having made fair copies of these poems, I signed every one of them “Oppodeldoc” (a fine sonorous name), and, doing each up nicely in a separate envelope, I dispatched one to each of the four principal magazines, with a request for speedy insertion and prompt pay. The result of this well-conceived plan, however, (the success of which would have saved me much trouble in after-life,) served to convince me that some editors are not to be bamboozled, and gave the *coup-de-grace* (as they say in France) to my nascent hopes (as they say in the city of the transcendentials).

The fact is, that each and every one of the magazines in question gave Mr. “Oppodeldoc” a complete using-up, in the “Monthly Notices to Correspondents.” The *Hum-Drum* gave him a dressing after this fashion:

“Oppodeldoc” (whoever he is) has sent us a long *tirade* concerning a bedlamite whom he styles “Ugolino,” who had a great many children that should have been all whipped and sent to bed without their suppers. The whole affair is exceedingly tame—not to say *flat*. “Oppodeldoc” (whoever he is) is entirely devoid of imagination—and imagination, in our humble opinion,

is not only the soul of POESY, but also its very heart. "Oppodeldoc" (whoever he is) has the audacity to demand of us, for his twattle, a "speedy insertion and prompt pay." We neither insert nor purchase any stuff of the sort. There can be no doubt, however, that he would meet with a ready sale for all the balderdash he can scribble, at the office of either the *Rowdy-Dow*, the *Lollipop*, or the *Goosetherumfoodle*.

All this, it must be acknowledged, was very severe upon "Oppodeldoc,"—but the unkindest cut was putting the word POESY in small caps. In those five pre-eminent letters what a world of bitterness is there not involved.

But "Oppodeldoc" was punished with equal severity in the *Rowdy-Dow*, which spoke thus:

We have received a most singular and insolent communication from a person (whoever he is) signing himself "Oppodeldoc,"—thus desecrating the greatness of the illustrious Roman emperor so named. Accompanying the letter of "Oppodeldoc" (whoever he is) we find sundry lines of most disgusting and unmeaning rant about "angels and ministers of grace,"—rant such as no madman short of a Nat Lee, or an "Oppodeldoc," could possibly perpetrate. And for this trash of trash, we are modestly requested to "pay promptly." No, sir—no! We pay for nothing of *that* sort. Apply to the *Hum-Drum*, the *Lollipop*, or the *Goosetherumfoodle*. These *periodicals* will undoubtedly accept any literary offal you may send them—and as undoubtedly *promise* to pay for it.

This was bitter indeed upon poor "Oppodeldoc"; but, in this instance, the weight of the satire falls upon the *Hum-Drum*, the *Lollipop*, and the *Goosetherumfoodle*, who are pungently

styled "*periodicals*"—in Italics, too—a thing that must have cut them to the heart.

Scarcely less savage was the *Lollipop*, which thus discoursed:

Some *individual*, who rejoices in the appellation "Oppodeldoc," (to what low uses are the names of the illustrious dead too often applied!) has enclosed us some fifty or sixty *verses* commencing after this fashion:

'Achilles' wrath, to Greece the direful spring
Of woes unnumbered, &c., &c., &c., &c.'

"Oppodeldoc" (whoever he is) is respectfully informed that there is not a printer's devil in our office who is not in the daily habit of composing better *lines*. Those of "Oppodeldoc" will not *scan*. "Oppodeldoc" should learn to *count*. But why he should have conceived the idea that *we* (of all others, *we*!) would disgrace our pages with his ineffable nonsense is utterly beyond comprehension. Why, the absurd twattle is scarcely good enough for the *Hum-Drum*, the *Rowdy-Dow*, the *Goosetherumjoodle*,—things that are in the practice of publishing "Mother Goose's Melodies" as original lyrics. And "Oppodeldoc" (whoever he is) has even the assurance to demand *pay* for this drivel. Does "Oppodeldoc" (whoever he is) know—is he aware that we could not be paid to insert it?"

As I perused this I felt myself growing gradually smaller and smaller, and when I came to the point at which the editor sneered at the poem as "*verses*," there was little more than an ounce of me left. As for "Oppodeldoc," I began to experience *compassion* for the poor fellow. But the *Goosetherumfoodle* showed, if possible, less mercy than the *Lollipop*. It was the *Goosetherumfoodle* that said—

A wretched poetaster, who signs himself "Oppodeldoc," is silly enough to fancy that *we* will print and *pay* for a medley of incoherent and ungrammatical bombast which he has transmitted to us, and which commences with the following most *intelligible* line:

'Hail, Holy Light! Offspring of Heaven, first born.'

We say, "most *intelligible*." "Oppodeldoc" (whoever he is) will be kind enough to tell us, perhaps, how "*hail*" can be "*holy light*." We always regarded it as *frozen ram*. Will he inform us, also, how frozen rain can be, at one and the same time, both "*holy light*" (whatever that is) and an "*offspring*"?—which latter term (if we understand any thing about English) is only employed, with propriety, in reference to small babies of about six weeks old. But it is preposterous to descant upon such absurdity—although "Oppodeldoc" (whoever he is) has the unparalleled effrontery to suppose that we will not only "insert" his ignorant ravings, but (absolutely) *pay for them*!

Now this is fine—it is rich!—and we have half a mind to punish this young scribbler for his egotism by really publishing his effusion *verbatim et literatim*, as he has written it. We could inflict no punishment so severe, and we *would* inflict it, but for the boredom which we should cause our readers in so doing.

Let "Oppodeldoc" (whoever he is) send any future composition of like character to the *Hum-Drum*, the *Lollipop*, or the *Rowdy-Dow*. They will "insert" it. They "insert" every month just such stuff. Send it to *them*. WE are not to be insulted with impunity."

This made an end of me; and as for the *Hum-Drum*, the *Rowdy-Dow*, and the *Lollipop*, I never could comprehend how they survived it. The putting *them* in the smallest possible *minion*, (that was the rub—thereby insinuating their lowness—their baseness,) while WE stood look-

ing down upon them in gigantic capitals!—oh it was *too* bitter!—it was wormwood—it was gall. Had I been either of these periodicals I would have spared no pains to have the *Goosetherumfoodle* prosecuted. It might have been done under the Act for the “Prevention of Cruelty to Animals.” As for Oppodeldoc (whoever he was) I had by this time lost all patience with the fellow, and sympathized with him no longer. He was a fool, beyond doubt, (whoever he was,) and got not a kick more than he deserved.

The result of my experiment with the old books convinced me, in the first place, that “honesty is the best policy,” and, in the second, that if I could not write better than Mr. Dante, and the two blind men, and the rest of the old set, it would, at least, be a difficult matter to write worse. I took heart, therefore, and determined to prosecute the “entirely original” (as they say on the covers of the magazines), at whatever cost of study and pains. I again placed before my eyes, as a model, the brilliant stanzas on “The Oil-of-Bob” by the editor of the *Gad-Fly* and resolved to construct an ode on the same sublime theme, in rivalry of what had already been done.

With my first line I had no material difficulty. It ran thus:

“To pen an Ode upon the ‘Oil-of-Bob.’”

Having carefully looked out, however, all the legitimate rhymes to “Bob,” I found it impossible to proceed. In this dilemma I had recourse to paternal aid; and, after some hours

of mature thought, my father and myself then constructed the poem:

"To pen an Ode upon the 'Oil-of-Bob'
 As all sorts of a job
 (Signed)

SNOB."

To be sure, this composition was of no very great length,—but I "have yet to learn," as they say in the *Edinburgh Review*, that the mere extent of a literary work has anything to do with its merit. As for the Quarterly cant about "sustained effort," it is impossible to see the sense of it. Upon the whole, therefore, I was satisfied with the success of my maiden attempt, and now the only question regarded the disposal I should make of it. My father suggested that I should send it to the *Gad-Fly*,—but there were two reasons which operated to prevent me from so doing. I dreaded the jealousy of the editor—and I had ascertained that he did not pay for original contributions. I therefore, after due deliberation, consigned the article to the more dignified pages of the *Lolli-pop* and waited the event in anxiety, but with resignation.

In the very next published number I had the proud satisfaction of seeing my poem printed at length, as the leading article, with the following significant words, prefixed in italics and between brackets:

[We call the attention of our readers to the subjoined admirable stanzas on "The Oil-of-Bob." We need say nothing of their sublimity, or of their pathos;—it is im-

possible to peruse them without tears. Those who have been nauseated with a sad dose on the same august topic from the goose-quill of the editor of the "Gad-Fly," will do well to compare the two compositions.

P. S.—We are consumed with anxiety to probe the mystery which envelops the evident pseudonym "Snob." May we hope for a personal interview?]

All this was scarcely more than justice, but it was, I confess, rather more than I had expected:—I acknowledged this, be it observed, to the everlasting disgrace of my country and of mankind. I lost no time, however, in calling upon the editor of the *Lollipop* and had the good fortune to find this gentleman at home. He saluted me with an air of profound respect, slightly blended with a fatherly and patronizing admiration, wrought in him, no doubt, by my appearance of extreme youth and inexperience. Begging me to be seated, he entered at once upon the subject of my poem;—but modesty will ever forbid me to repeat the thousand compliments which he lavished upon me. The eulogies of Mr. Crab (such was the editor's name) were, however, by no means fulsomely indiscriminate. He analyzed my composition with much freedom and great ability—not hesitating to point out a few trivial defects—a circumstance which elevated him highly in my esteem. The *Gad-Fly* was, of course, brought upon the tapis, and I hope never to be subjected to a criticism so searching, or to rebukes so withering, as were bestowed by Mr. Crab upon that unhappy effusion. I had been ac-

customed to regard the editor of the *Gad-Fly* as something superhuman; but Mr. Crab soon disabused me of that idea. He set the literary as well as the personal character of the Fly (so Mr. C. satirically designated the rival editor), in its true light. He, the Fly, was very little better than he should be. He had written infamous things. He was a penny-a-liner, and a buffoon. He was a villain. He had composed a tragedy which set the whole country in a guffaw, and a farce which deluged the universe in tears. Besides all this, he had the impudence to pen what he meant for a lampoon upon himself (Mr. Crab), and the temerity to style him "an ass." Should I at any time wish to express my opinion of Mr. Fly, the pages of the *Lollipop* Mr. Crab assured me, were at my unlimited disposal. In the meantime, as it was very certain that I would be attacked in the Fly for my attempt at composing a rival poem on the "Oul-of-Bob," he (Mr. Crab) would take it upon himself to attend, pointedly, to my private and personal interests. If I were not made a man of at once, it should not be the fault of himself (Mr. Crab).

Mr. Crab having now paused in his discourse (the latter portion of which I found it impossible to comprehend), I ventured to suggest something about the remuneration which I had been taught to expect for my poem, by an announcement on the cover of the *Lollipop*, declaring that it (the *Lollipop*) "insisted upon being permitted to pay exorbitant prices for all

accepted contributions,—frequently expending more money for a single brief poem than the whole annual cost of the *Hum-Drum*, the *Rowdy-Dow*, and the *Goosetherumfoodle* combined.”

As I mentioned the word “remuneration,” Mr. Crab first opened his eyes, and then his mouth, to quite a remarkable extent, causing his personal appearance to resemble that of a highly agitated elderly duck in the act of quacking; and in this condition he remained (ever and anon pressing his hands tightly to his forehead, as if in a state of desperate bewilderment) until I had nearly made an end of what I had to say.

Upon my conclusion, he sank back into his seat, as if much overcome, letting his arms fall lifelessly by his side, but keeping his mouth still rigorously open, after the fashion of the duck. While I remained in speechless astonishment at behavior so alarming, he suddenly leaped to his feet and made a rush at the bell-rope; but just as he reached this, he appeared to have altered his intention, whatever it was, for he dived under a table and immediately re-appeared with a cudgel. This he was in the act of uplifting (for what purpose I am at a loss to imagine), when all at once, there came a benign smile over his features, and he sank placidly back in his chair.

“Mr. Bob,” he said, (for I had sent up my card before ascending myself,) “Mr. Bob, you are a young man, I presume—*very?* ”

I assented; adding that I had not yet concluded my third lustrum.

"Ah!" he replied, "very good! I see how it is—say no more! Touching this matter of compensation, what you observe is very just,—in fact it is excessively so. But ah—ah—the *first* contribution—the *first*, I say—it is never the magazine custom to pay for,—you comprehend, eh? The truth is, we are usually the *recipients* in such case." [Mr. Crab smiled blandly as he emphasized the word "*recipients*."] "For the most part, we are *paid* for the insertion of a maiden attempt—especially in verse. In the second place, Mr. Bob, the magazine rule is never to disburse what we term in France the *argent comptant*:—I have no doubt you understand. In a quarter or two after publication of the article—or in a year or two—we make no objection to giving our note at nine months; provided, always, that we can so arrange our affairs as to be quite certain of a 'burst up' in six. I really *do* hope, Mr. Bob, that you will look upon this explanation as satisfactory." Here Mr. Crab concluded, and the tears stood in his eyes.

Grieved to the soul at having been, however innocently, the cause of pain to so eminent and so sensitive a man, I hastened to apologize, and to reassure him, by expressing my perfect coincidence with his views, as well as my entire appreciation of the delicacy of his position. Having done all this in a neat speech, I took leave.

One fine morning, very shortly afterward, "I

awoke and found myself famous." The extent of my renown will be best estimated by reference to the editorial opinions of the day. These opinions, it will be seen, were embodied in critical notices of the number of the *Lollipop* containing my poem, and are perfectly satisfactory, conclusive, and clear with the exception, perhaps, of the hieroglyphical marks, "Sep. 15—1 t," appended to each of the critiques.

The *Owl*, a journal of profound sagacity, and well known for the deliberate gravity of its literary decisions—the *Owl*, I say, spoke as follows:

The *Lollipop*! The October number of this delicious magazine surpasses its predecessors, and sets competition at defiance. In the beauty of its typography and paper—in the number and excellence of its steel plates—as well as in the literary merit of its contributions—the *Lollipop* compares with its slow-paced rivals as Hyperion with Satyr. The *Hum-Drum*, the *Rowdy-Dow*, and the *Goosetherumfoodle*, excel, it is true, in braggadocio, but in all other points, give us the *Lollipop*! How this celebrated journal can sustain its evidently tremendous expenses, is more than we can understand. To be sure, it has a circulation of 100,000, and its subscription list has increased one fourth during the last month; but, on the other hand, the sums it disburses constantly for contributions are inconceivable. It is reported that Mr. Slyass received no less than thirty-seven and a half cents for his inimitable paper on "Pigs." With Mr. CRAB, as editor, and with such names upon the list of contributors as SNOB and Slyass, there can be no such word as "fail" for the *Lollipop*. Go and subscribe.
Sep 15—1 t.

I must say that I was gratified with this high-toned notice from a paper so respectable as the

Owl. The placing my name—that is to say, my *nom de guerre*—in priority of station to that of the great Slyass, was a compliment as happy as I felt it to be deserved.

My attention was next arrested by these paragraphs in the *Toad*—a print highly distinguished for its uprightness and independence—for its entire freedom from sycophancy and subservience to the givers of dinners:

The *Lollipop* for October is out in advance of all its contemporaries, and infinitely surpasses them, of course, in the splendor of its embellishments, as well as in the richness of its contents. The *Hum-Drum*, the *Rowdy-Dow*, and the *Goosetherumfoodle* excel, we admit, in braggadocio, but, in all other points, give us the *Lollipop*. How this celebrated magazine can sustain its evidently tremendous expenses is more than we can understand. To be sure, it has a circulation of 200,000, and its subscription list has increased one third during the last fortnight, but, on the other hand, the sums it disburses, monthly, for contributions, are fearfully great. We learn that Mr. Mumblethumb received no less than fifty cents for his late “Monody in a Mud-Puddle.”

Among the original contributors to the present number we notice (besides the eminent editor, Mr. CRAB), such men as SNOB, Slyass, and Mumblethumb. Apart from the editorial matter, the most valuable paper, nevertheless, is, we think, a poetical gem by Snob, on the “Oil-of-Bob,”—but our readers must not suppose from the title of this incomparable *bijou*, that it bears any similitude to some balderdash on the same subject by a certain contemptible individual whose name is unmentionable to ears polite. The present poem “On the Oil-of-Bob,” has excited universal anxiety and curiosity in respect to the owner of the evident pseudonym, “Snob,”—a curiosity which, happily, we have it in our power to satisfy. “Snob” is the *nom de plume* of Mr. Thingum Bob, of this city,—a relative of the great Mr

Thingum (after whom he is named), and otherwise connected with the most illustrious families of the State. His father, Thomas Bob, Esq., is an opulent merchant in Smug.

Sep. 15—1 t.

This generous approbation touched me to the heart—the more especially as it emanated from a source so avowedly—so proverbially pure as the *Toad*. The word “balderdash,” as applied to the “Oil-of-Bob” of the Fly, I considered singularly pungent and appropriate. The words “gem” and “*bijou*,” however, used in reference to my composition, struck me as being, in some degree, feeble. They seemed to me to be deficient in force. They were not sufficiently *prononcés* (as we have it in France).

I had hardly finished reading the *Toad*, when a friend placed in my hands a copy of the *Mole*, a daily, enjoying high reputation for the keenness of its perception about matters in general, and for the open, honest, above-ground style of its editorials. The *Mole* spoke of the *Lollipop* as follows:

We have just received the *Lollipop* for October, and must say that never before have we perused any single number of any periodical which afforded us a felicity so supreme. We speak advisedly. The *Hum-Drum*, the *Rowdy-Dow*, and the *Goosetherumfoodle* must look well to their laurels. These prints, no doubt, surpass every thing in loudness of pretension, but, in all other points, give us the *Lollipop*! How this celebrated magazine can sustain its evidently tremendous expenses, is more than we can comprehend. To be sure, it has a circulation of 300,000; and its subscription list has increased one half within the last week, but then the sum it disburses, monthly, for contributions, is astonishingly enor-

mous. We have it upon good authority that Mr. Fatquack received no less than sixty-two cents and a half for his late domestic nouvelle, the "Dish-Clout."

The contributors to the number before us are Mr. CRAB (the eminent editor), SNOB, Mumblethumb, Fatquack, and others; but, after the inimitable compositions of the editor himself, we prefer a diamond-like effusion from the pen of a rising poet who writes over the signature "Snob"—a *nom de guerre* which we predict will one day extinguish the radiance of "Boz." "SNOB," we learn, is a Mr. THINGUM BOB, Esq., sole heir of a wealthy merchant of this city, Thomas Bob, Esq., and a near relative of the distinguished Mr. Thingum. The title of Mr. B.'s admirable poem is the "Oil-of-Bob"—a somewhat unfortunate name, by-the-by, as some contemptible vagabond connected with the penny press has already disgusted the town with a great deal of drivel upon the same topic. There will be no danger, however, of confounding the compositions.

Sept. 15—1 t.

The generous approbation of so clear-sighted a journal as the *Mole* penetrated my soul with delight. The only objection which occurred to me was, that the terms "contemptible vagabond" might have been better written "*odious and contemptible wretch, villain, and vagabond.*" This would have sounded more gracefully, I think. "Diamond-like," also, was scarcely, it will be admitted, of sufficient intensity to express what the *Mole* evidently *thought* of the brilliancy of the "Oil-of-Bob."

On the same afternoon in which I saw these notices in the *Owl*, the *Toad*, and the *Mole*, I happened to meet with a copy of the *Daddy-Long-Legs*, a periodical proverbial for the ex-

treme extent of its understanding. And it was the *Daddy-Long-Legs* which spoke thus:

The *Lollipop*!! This gorgeous magazine is already before the public for October. The question of pre-eminence is forever put to rest, and hereafter it will be excessively preposterous in the *Hum-Drum*, the *Rowdy-Dow*, or the *Goosetherumfoodle* to make any further spasmodic attempts at competition. These journals may excel the *Lollipop* in outcry, but, in all other points, give us the *Lollipop*! How this celebrated magazine can sustain its evidently tremendous expenses, is past comprehension. To be sure it has a circulation of precisely half a million, and its subscription list has increased seventy-five per cent. within the last couple of days, but then the sums it disburses, monthly, for contributions, are scarcely credible; we are cognizant of the fact, that Mademoiselle Cribalittle received no less than eighty-seven cents and a half for her late valuable Revolutionary tale, entitled "The York-Town Katy-Did, and the Bunker-Hill Katy-Did n't."

The most able papers in the present number are, of course, those furnished by the editor (the eminent Mr. CRAB), but there are numerous magnificent contributions from such names as SNOB, Mademoiselle Cribalittle, Slyass, Mrs. Fibalittle, Mumblethumb, Mrs. Squibalittle, and last, though not least, Fatquack. The world may well be challenged to produce so rich a galaxy of genius.

The poem over the signature "SNOB" is, we find, attracting universal commendation, and, we are constrained to say, deserves, if possible, even more applause than it has received. The "Oil-of-Bob" is the title of this masterpiece of eloquence and art. One or two of our readers *may* have a *very* faint, although sufficiently disgusting recollection of a poem (?) similarly entitled, the perpetration of a miserable penny-a-liner, mendicant, and cut-throat, connected in the capacity of scullion, we believe, with one of the indecent prints about the purlieus of the city; we beg them, for God's sake, not to

confound the compositions. The author of the "*Oil-of-Bob*," is, we hear, THINGUM BOB, Esq., a gentleman of high genius, and a scholar. "*Snob*" is merely a *nom de guerre*. Sep. 15.—1 t.

I could scarcely restrain my indignation while I perused the concluding portions of this diatribe. It was clear to me that the yea-nay manner—not to say the gentleness,—the positive forbearance—with which the *Daddy-Long-Legs* spoke of that pig, the editor of the *Gad-Fly*,—it was evident to me, I say, that this gentleness of speech could proceed from nothing else than a partiality for the *Fly*—whom it was clearly the intention of the *Daddy-Long-Legs* to elevate into reputation at my expense. Any one, indeed, might perceive, with half an eye, that, had the real design of the *Daddy* been what it wished to appear, it (the *Daddy*) might have expressed itself in terms more direct, more pungent, and altogether more to the purpose. The words "*penny-a-liner*," "*mendicant*," "*scullion*," and "*cut-throat*," were epithets so intentionally inexpressive and equivocal, as to be worse than nothing when applied to the author of the very worse stanzas ever penned by one of the human race. We all know what is meant by "*damning with faint praise*," and, on the other hand, who could fail seeing through the covert purpose of the *Daddy*,—that of glorifying with feeble abuse?

What the *Daddy* chose to say to the *Fly*, however, was no business of mine. What it said of myself *was*. After the noble manner in which

the *Gwl*, the *Toad*, the *Mole*, had expressed themselves in respect to my ability, it was rather too much to be coolly spoken of by a thing like the *Daddy-Long-Legs*, as merely "a gentleman of high genius and a scholar." Gentleman indeed! I made up my mind at once either to get a written apology from the *Daddy-Long-Legs*, or to call it out.

Full of this purpose, I looked about me to find a friend whom I could entrust with a message to his *Daddyship*, and as the editor of the *Lollipop* had given me marked tokens of regard, I at length concluded to seek assistance upon the present occasion.

I have never yet been able to account, in a manner satisfactory to my own understanding, for the *very* peculiar countenance and demeanor with which Mr. Crab listened to me, as I unfolded to him my design. He again went through the scene of the bell-rope and cudgel, and did not omit the duck. At one period I thought he really intended to quack. His fit, nevertheless, finally subsided as before, and he began to act and speak in a rational way. He declined bearing the cartel, however, and in fact, dissuaded me from sending it at all; but was candid enough to admit the *Daddy-Long-Legs* had been disgracefully in the wrong—more especially in what related to the epithets "gentleman and scholar."

Toward the end of this interview with Mr. Crab, who really appeared to take a paternal interest in my welfare, he suggested to me that

I might turn an honest penny, and at the same time, advance my reputation, by occasionally playing Thomas Hawk for the *Lollipop*.

I begged Mr. Crab to inform me who was Mr. Thomas Hawk, and how it was expected that I should play him.

Here Mr. Crab again "made great eyes" (as we say in Germany), but at length, recovering himself from a profound attack of astonishment, he assured me that he employed the words "Thomas Hawk" to avoid the colloquialism, Tommy, which was low—but that the true idea was Tommy Hawk—or tomahawk—and that by "playing tomahawk" he referred to scalping, brow-beating, and otherwise using up the herd of poor-devil authors.

I assured my patron that, if this was all, I was perfectly resigned to the task of playing Thomas Hawk. Hereupon Mr. Crab desired me to use up the editor of the *Gad-Fly* forthwith, in the fiercest style within the scope of my ability, and as a specimen of my powers. This I did, upon the spot, in a review of the original "Oil-of-Bob," occupying thirty-six pages of the *Lollipop*. I found playing Thomas Hawk, indeed, a far less onerous occupation than poetizing; for I went upon *system* altogether, and thus it was easy to do the thing thoroughly well. My practice was this. I bought auction copies (cheap) of "Lord Brougham's speeches," "Cobbett's Complete Works," the "New Slang-Syllabus," the "Whole Art of Snubbing," "Prentice's Billingsgate" (folio edition), and "Lewis G. Clarke on

Tongue." These works I cut up thoroughly with a curry-comb, and then, throwing the shreds into a sieve, sifted out carefully all that might be thought decent (a mere trifle); reserving the hard phrases, which I threw into a large tin pepper-castor with longitudinal holes, so that an entire sentence could get through without material injury. The admixture was then ready for use. When called upon to play Thomas Hawk, I appointed a sheet of foolscap with the white of a gander's egg; then, shredding the thing to be reviewed as I had previously shredded the books—only with more care, so as to get every word separate—I threw the latter shreds in with the former, screwed on the lid of the castor, gave it a shake, and so dusted out the mixture upon the egged foolscap; where it stuck. The effect was beautiful to behold. It was captivating. Indeed, the reviews I brought to pass by this simple expedient have never been approached, and were the wonder of the world. At first, through bashfulness—the result of inexperience—I was a little put out by a certain inconsistency—a certain air of the *bizarre* (as we say in France), worn by the composition as a whole. All the phrases did not *fit* (as we say in the Anglo-Saxon). Many were quite awry. Some, even, were upsidedown; and there were none of them which were not in some measure, injured in regard to effect, by this latter species of accident, when it occurred—with the exception of Mr. Lewis Clarke's paragraphs, which were so vigorous and altogether stout, that they seemed not particularly disconcerted by any

extreme of position, but looked equally happy and satisfactory, whether on their heads, or on their heels.

What became of the editor of the *Gad-Fly* after the publication of my criticism on his "Oil-of-Bob," it is somewhat difficult to determine. The most reasonable conclusion is, that he wept himself to death. At all events he disappeared instantaneously from the face of the earth, and no man has seen even the ghost of him since.

This matter having been properly accomplished, and the Furies appeased, I grew at once into high favor with Mr. Crab. He took me into his confidence, gave me a permanent situation as Thomas Hawk of the *Lollipop*, and, as for the present, he could afford me no salary, allowed me to profit, at discretion, by his advice.

"My dear Thingum," said he to me one day after dinner, "I respect your abilities and love you as a son. You shall be my heir. When I die I will bequeath you the *Lollipop*. In the meantime I will make a man of you—I *will*—provided always that you follow my counsel. The first thing to do is to get rid of the old bore."

"Boar?" said I inquiringly—"pig, eh?—*asper*? (as we say in Latin)—who?—where?"

"Your father," said he.

"Precisely," I replied,—"*pig*."

"You have your fortune to make, Thingum," resumed Mr. Crab, "and that governor of yours is a millstone about your neck. We must cut him at once." [Here I took out my knife.] "We must cut him," continued Mr. Crab, "decidedly

and forever. He won't do—he *won't*. Upon second thoughts, you had better kick him, or cane him, or something of that kind."

"What do you say," I suggested modestly, "to my kicking him in the first instance, caning him afterward, and winding up by tweaking his nose?"

Mr. Crab looked at me musingly for some moments, and then answered:

"I think, Mr. Bob, that what you propose would answer sufficiently well—indeed remarkably well—that is to say, as far as it went—but barbers are exceedingly hard to cut, and I think, upon the whole, that, having performed upon Thomas Bob the operations you suggest, it would be advisable to blacken, with your fists, both his eyes, very carefully and thoroughly, to prevent his ever seeing you again in fashionable promenades. After doing this, I really do not perceive that you can do any more. However—it might be just as well to roll him once or twice in the gutter, and then put him in charge of the police. Any time the next morning you can call at the watch-house and swear an assault."

I was much affected by the kindness of feeling toward me personally, which was evinced in this excellent advice of Mr. Crab, and I did not fail to profit by it forthwith. The result was, that I got rid of the old bore, and began to feel a little independent and gentleman-like. The want of money, however, was, for a few weeks, a source of some discomfort; but at length, by carefully putting to use my two eyes, and observing how

matters went just in front of my nose, I perceived how the thing was to be brought about. I say "thing"—be it observed—for they tell me the Latin for it is *rem*. By the way, talking of Latin, can any one tell me the meaning of *quocunque*—or what is the meaning of *modo*?

My plan was exceedingly simple. I bought, for a song, a sixteenth of the *Snapping-Turtle*:—that was all. The thing was *done*, and I put money in my purse. There were some trivial arrangements afterward, 'to be sure; but these formed no portion of the plan. They were a consequence—a result. For example, I bought pen, ink, and paper, and put them into furious activity. Having thus completed a Magazine article, I gave it, for appellation, "FOL LOL, *by the Author of 'THE OIL-OF-BOB,'*" and enveloped it to the *Goosetherumfoodle*. That journal, however, having pronounced it "twatle" in the "Monthly Notices to Correspondents," I reheaded the paper "'Hey-Diddle-Diddle,' by THINGUM BOB, Esq., Author of the Ode on 'The Oil-of-Bob,' and Editor of the *Snapping-Turtle*." With this amendment, I re-enclosed it to the *Goosetherumfoodle*, and, while I awaited a reply, published daily, in the *Turtle*, six columns of what may be termed philosophical and analytical investigation of the literary merits of the *Goosetherumfoodle*, as well as of the personal character of the editor of the *Goosetherumfoodle*. At the end of a week the *Goosetherumfoodle* discovered that it had, by some odd mistake, "confounded a stupid article, headed, 'Hey-Diddle-Diddle,' and composed by

some unknown ignoramus, with a gem of resplendent lustre similarly entitled, the work of Thingum Bob, Esq., the celebrated author of 'The Oil-of-Bob.' " The *Goosetherumfoodle* deeply "regretted this very natural accident," and promised, moreover, an insertion of the *genuine* "Hey-Diddle-Diddle" in the very next number of the Magazine.

The fact is, I *thought*—I *really* thought—I thought at the time—I thought *then*—and have no reason for thinking otherwise *now*—that the *Goosetherumfoodle* *did* make a mistake. With the best intentions in the world, I never knew any thing that made as many singular mistakes as the *Goosetherumfoodle*. From that day I took a liking to the *Goosetherumfoodle*, and the result was I soon saw into the very depths of its literary merits, and did not fail to expatiate upon them, in the *Turtle*, whenever a fitting opportunity occurred. And it is to be regarded as a very peculiar coincidence—as one of those positively *remarkable* coincidences which set a man to serious thinking—that just such a total revolution of opinion—just such entire *bouleversement* (as we say in French),—just such thorough *topsiturviness* (if I may be permitted to employ a rather forcible term of the Choctaws), as happened, *pro* and *con*, between myself on the one part, and the *Goosetherumfoodle* on the other, did actually again happen, in a brief period afterwards, and with precisely similar circumstances, in the case of myself and the *Rowdy*.

Dow, and in the case of myself and the *Hum-Drum*.

Thus it was that, by a master-stroke of genius, I at length consummated my triumphs by "putting money in my purse," and thus may be said really and fairly to have commenced that brilliant and eventful career which rendered me illustrious, and which now enables me to say with Chateaubriand: "I have made history"—"*J'ai fait l'histoire.*"

I have indeed "made history." From the bright epoch which I now record, my actions—my works—are the property of mankind. They are familiar to the world. It is, then, needless for me to detail how, soaring rapidly, I fell heir to the *Lollipop*—how I merged this journal in the *Hum-Drum*—how again I made purchase of the *Rowdy-Dow*, thus combining the three periodicals—how lastly, I effected a bargain for the sole remaining rival, and united all the literature of the country in one magnificent Magazine known everywhere as the

*Rowdy-Dow, Lollipop, Hum-Drum,
and
Goosetherumfoodle.*

Yes; I have made history. My fame is universal. It extends to the uttermost ends of the earth. You cannot take up a common newspaper in which you shall not see some allusion to the immortal THINGUM BOB. It is Mr. Thingum Bob said so, and Mr. Thingum Bob wrote this, and

Mr. Thingum Bob did that. But I am meek and expire with an humble heart. After all, what is it?—this indescribable something which men will persist in terming “genius”? I agree with Buffon—with Hogarth—it is but *diligence* after all.

Look at *me!*—how I labored—how I toiled—how I wrote! Ye Gods, did I *not* write? I *knew* not the word “ease.” By day I adhered to my desk, and at night, a pale student, I consumed the midnight oil. You should have seen me—you *should*. I leaned to the right. I leaned to the left. I sat forward. I sat backward. I sat *tête baissée* (as they have it in the Kickapoo), bowing my head close to the alabaster page. And, through all, I—*wrote*. Through joy and through sorrow, I—*wrote*. Through hunger and through thirst, I—*wrote*. Through good report and through ill report, I—*wrote*. Through sunshine and through moonshine, I—*wrote*. What I wrote it is unnecessary to say. The *style!*—that was the thing. I caught it from Fatquack—whizz!—fizz!—and I am giving you a specimen of it now.

THE ELK

(Morning on the Wissahiecon.)

[Published in *The Opal*, 1844.]

THE natural scenery of America has often been contrasted, in its general features as well as in detail, with the landscape of the Old World—more especially in Europe—and not deeper has been the enthusiasm, than wide the dissension, of the supporters of each region. The discussion is one not likely to be soon closed, for, although much has been said on both sides, a word more yet remains to be said.

The most conspicuous of the British tourists who have attempted a comparison, seem to regard our northern and eastern seaboard, comparatively speaking, as all of America, at least, as all of the United States, worthy consideration. They say little, because they have seen less, of the gorgeous interior scenery of some of our western and southern districts—of the vast valley of Louisiana, for example,—a realization of the wildest dreams of paradise. For the most part, these travellers content themselves with a

hasty inspection of the natural *lions* of the land—the Hudson, Niagara, the Catskills, Harper's Ferry, the lakes of New York, the Ohio, the prairies, and the Mississippi. These, indeed, are objects well worthy the contemplation even of him who has just clambered by the castellated Rhine, or roamed

“By the blue rushing of the arrowy Rhone;”

but these are not *all* of which we can boast; and, indeed, I will be so hardy as to assert that there are innumerable quiet, obscure, and scarcely explored nooks, within the limits of the United States, that, by the true artist, or cultivated lover of the grand and beautiful amid the works of God, will be preferred to each *and to all* of the chronicled and better accredited scenes to which I have referred.

In fact, the real Edens of the land lie far away from the track of our own most deliberate tourists—how very far, then, beyond the reach of the foreigner, who, having made with his publisher at home arrangements for a certain amount of comment upon America, to be furnished in a stipulated period, can hope to fulfil his agreement in no other manner than by steaming it, memorandum-book in hand, through only the most beaten thoroughfares of the country!

I mentioned, just above, the valley of Louisiana. Of all extensive areas of natural loveliness, this is perhaps the most lovely. No fiction has approached it. The most gorgeous imagination might derive suggestions from its exuberant

beauty. And *beauty* is, indeed, its sole character. It has little, or rather nothing, of the sublime. Gentle undulations of soil, interwreathed with fantastic crystallic streams, banked by flowery slopes, and backed by a forest vegetation, gigantic, glossy, multicoloured, sparkling with gay birds and burthened with perfume—these features make up, in the vale of Louisiana, the most voluptuous natural scenery upon earth.

But, even of this delicious region, the sweeter portions are reached only by bypaths. Indeed, in America generally, the traveller who would behold the finest landscapes, must seek them not by the railroad, nor by the steamboat, nor by the stage-coach, nor in his private carriage, nor yet even on horseback—but on foot. He must *walk*, he must leap ravines, he must risk his neck among precipices, or he must leave unseen the truest, the richest, and the most unspeakable glories of the land.

Now in the greater portion of Europe no such necessity exists. In England it exists not at all. The merest dandy of a tourist may there visit every nook worth visiting without detriment to his silk stockings; so thoroughly known are all points of interest, and so well-arranged are the means of attaining them. This consideration has never been allowed its due weight, in comparisons of the natural scenery of the Old and New Worlds. The entire loveliness of the former is collated with only the most noted, and with by no means the most eminent items in the general loveliness of the latter.

River scenery has, unquestionably, within itself, all the main elements of beauty, and, time out of mind, has been the favourite theme of the poet. But much of this fame is attributable to the predominance of travel in fluvial over that in mountainous districts. In the same way, large rivers, because usually highways, have, in all countries, absorbed an undue share of admiration. They are more observed, and, consequently, made more the subject of discourse, than less important, but often more interesting streams.

A singular exemplification of my remarks upon this head may be found in the Wissahiccon, a brook, (for more it can scarcely be called,) which empties itself into the Schuylkill, about six miles westward of Philadelphia. Now the Wissahiccon is of so remarkable a loveliness that, were it flowing in England, it would be the theme of every bard, and the common topic of every tongue, if, indeed, its banks were not parcelled off in lots, at an exorbitant price, as building-sites for the villas of the opulent. Yet it is only within a very few years that any one has more than heard of the Wissahiccon, while the broader and more navigable water into which it flows, has been long celebrated as one of the finest specimens of American river scenery. The Schuylkill, whose beauties have been much exaggerated, and whose banks, at least in the neighborhood of Philadelphia, are marshy like those of the Delaware, is not at all comparable, as an object of

picturesque interest, with the more humble and less notorious rivulet of which we speak.

It was not until Fanny Kemble, in her droll book about the United States, pointed out to the Philadelphians the rare loveliness of a stream which lay at their own doors, that this loveliness was more than suspected by a few adventurous pedestrians of the vicinity. But, the "Journal" having opened all eyes, the Wissahiccon, to a certain extent, rolled at once into notoriety. I say "to a certain extent," for, in fact, the true beauty of the stream lies far above the *route* of the Philadelphian picturesque-hunters, who rarely proceed farther than a mile or two above the mouth of the rivulet—for the very excellent reason that here the carriage-road stops. I would advise the adventurer who would behold its finest points to take the Ridge Road, running westwardly from the city, and, having reached the second lane beyond the sixth mile-stone, to follow this lane to its termination. He will thus strike the Wissahiccon, at one of its best reaches, and, in a skiff, or by clambering along its banks, he can go up or down the stream, as best suits his fancy, and in either direction will meet his reward.

I have already said, or should have said, that the brook is narrow. Its banks are generally, indeed almost universally, precipitous, and consist of high hills, clothed with noble shrubbery near the water, and crowned at a greater elevation, with some of the most magnificent forest trees of America, among which stands conspicu-

ous the *liriodendron tulipiferum*. The immediate shores, however, are of granite, sharply-defined or moss-covered, against which the pellucid water lolls in its gentle flow, as the blue waves of the Mediterranean upon the steps of her palaces of marble. Occasionally in front of the cliffs, extends a small definite *plateau* of richly herbage land, affording the most picturesque position for a cottage and garden which the richest imagination could conceive. The windings of the stream are many and abrupt, as is usually the case where banks are precipitous, and thus the impression conveyed to the voyager's eye, as he proceeds, is that of an endless succession of infinitely varied small lakes, or, more properly speaking, tarns. The Wissahiccon, however, should be visited, not like "fair Melrose," by moonlight, or even in cloudy weather, but amid the brightest glare of a noonday sun; for the narrowness of the gorge through which it flows, the height of the hills on either hand, and the density of the foliage, conspire to produce a gloominess, if not an absolute dreariness of effect, which unless relieved by a bright general light, detracts from the mere beauty of the scene.

Not long ago I visited the stream by the route described, and spent the better part of a sultry day in floating in a skiff upon its bosom. The heat gradually overcame me, and, resigning myself to the influence of the scenes and of the weather, and of the gently moving current, I sank into a half slumber, during which my

imagination revelled in visions of the Wissahiccon of ancient days—of the “good old days” when the Demon of the Engine was not, when pic-nics were undreamed of, when “water privileges” were neither bought nor sold, and when the red man trod alone, with the elk, upon the ridges that now towered above. And, while gradually these conceits took possession of my mind, the lazy brook had borne me, inch by inch, around one promontory and within full view of another that bounded the prospect at the distance of forty or fifty yards. It was a steep rocky cliff, abutting far into the stream, and presenting much more of the Salvator character than any portion of the shore hitherto passed. What I saw upon this cliff, although surely an object of very extraordinary nature, the place and season considered, at first neither startled nor amazed me—so thoroughly and appropriately did it chime in with the half-slumberous fancies that enwrapped me. I saw, or dreamed that I saw, standing upon the extreme verge of the precipice, with neck outstretched, with ears erect, and the whole attitude indicative of profound and melancholy inquisitiveness, one of the oldest and boldest of those identical elks which had been coupled with the red men of my vision.

I say that, for a few moments, this apparition neither startled nor amazed me. During this interval my whole soul was bound up in intense sympathy alone. I fancied the elk repining, not less than wondering, at the manifest alterations for the worse, wrought upon the brook and its

vicinage, even within the last few years, by the stern hand of the utilitarian. But a slight movement of the animal's head at once dispelled the dreaminess which invested me, and aroused me to a full sense of the novelty of the adventure. I arose upon one knee within the skiff, and, while I hesitated whether to stop my career, or let myself float nearer to the object of my wonder, I heard the words "hist!" "hist!" ejaculated quickly but cautiously, from the shrubbery overhead. In an instant afterwards, a negro emerged from the thicket, putting aside the bushes with care, and treading stealthily. He bore in one hand a quantity of salt, and, holding it towards the elk, gently yet steadily approached. The noble animal, although a little fluttered, made no attempt at escape. The negro advanced; offered the salt; and spoke a few words of encouragement or conciliation. Presently, the elk bowed and stamped, and then lay quietly down and was secured with a halter.

Thus ended my romance of the elk. It was a *pet* of great age and very domestic habits, and belonged to an English family occupying a villa in the vicinity.

GENERAL INDEX

The first number indicates the volume, the second the page.

Adventure of one Hans Pfaall, The Unparalleled [tale]	III, 5
